

The AMATEUR^{3D} PHOTOGRAPHER & CINEMATOGRAPHER

~ The Journal for Everybody with a Camera ~

Vol. LXXVIII.

Wednesday, July 4th, 1934.

No. 2382.

ENSIGN MIDGET

The Camera you can wear
always—just like your
watch and the beauty of it
is you get perfect results,
“enlargeable” to any size.

| Ensar F/6.3 Anastigmat | 50/- |

ENSIGN LTD., HIGH HOLBORN, LONDON, W.C.1.

In every way the finest Roll Film
for the "serious" worker . . .

"PANATOMIC" FILM

The name describes it—a *panchromatic* film of almost *atomic*-fine grain. It is double-coated—for detail in highlights and shadows—and is anti-halation backed.

The negatives prove it—they are crisply detailed and full of that rich luminous quality that you need for your finest pictorial work.

**"PANATOMIC" FILM
IS A KODAK PRODUCT**

Ask your
Kodak dealer
for "Panatomic"

KODAK LIMITED, KODAK HOUSE, KINGSWAY, LONDON, W.C.2

It is made in the popular roll film sizes

VOL. LXXVIII. No. 2382.

WE must take this opportunity to thank the hundreds of readers—many unknown to us by name, who have so kindly written expressing appreciation of "The A.P." Jubilee Number. We feel that this spontaneous expression of goodwill is a very gratifying thing to have received and to know that the paper is regarded with so much affection in so many quarters. Again, many thanks.

"The A.P." Prize Prints.

The annual Exhibition of Prize-winning Prints from "The A.P." Competitions will be opened this week at the house of the Royal Photographic Society, 35, Russell Square, W.C., and remain open until the end of the month. As in previous years, a selection of those awarded Hon. Mention in the Competitions will also be on view, and the annual award for the best print for the year will also be made. This will be announced in "The A.P." next week. In the meantime readers should note that the exhibition is open daily (Sundays excepted) and admission is free.

The 'Nineties by Gaslight.

Mr. Paul Martin, whose comments appeared in our Jubilee Number, was one of the earliest users of the hand camera—the specimen he used in those days was about as large as an attaché case, and made an embarrassing noise on exposure. Nevertheless, with this apparatus he got very many street scenes in the 'nineties, which, shown now as lantern slides in the carbon process, are of extraordinary interest as displaying the difference in habits and fashions over the space of forty years. As far back as 1896, too, he was getting photographs of London by night, and

A final photograph of Waterloo Bridge before the demolition started.

exhibiting them in the R.P.S., where they created great excitement. One of them, by the way, showed the illuminated front of the Alhambra in Leicester Square, with the announcement that the "animatograph" was to be seen for the first time, but at the Empire, at the same time, this novelty was described as "Lumière's Cinematograph." Twenty minutes' exposure at least, was usual in those days for London night scenes.

Another Photographic Centenary

Just a century ago on June 26th, Walter Bentley Woodbury, the inventor of "Woodburytype," was born at Manchester. When he was about fifteen Woodbury, who was destined for an engineering career, entered a Manchester patent office, but three years later he sailed for the Australian goldfields, and in the course of a varied career became cook, driver, labourer, builder, and paper-hanger, and finally an employee in the Melbourne waterworks. At Melbourne, Woodbury took up in earnest the study of photography, specialising in the collodion process, which Archer had invented just before Woodbury left England. With a partner, Woodbury left for Java, and from Batavia sent home a fine collection of tropical views in this process, which Negretti and Zambra published. In 1863 Woodbury returned to England, settling in Birmingham and continuing his photographic researches. During 1864 he experimented with carbon printing, and discovered a new method of photographic engraving, which was called the Woodbury type. In the following year he presented to the Photographic Society some wonderful work done by this method. The process (by

which a photographic image in relief in bichromated gelatine was caused by enormous pressure to indent a sheet of lead, forming a permanent negative) was patented in July, 1866, and the invention came into general use in England and America. Before his death (which occurred in 1885 as the result of an overdose of laudanum) Woodbury took out over twenty patents for photo-mechanical printing processes, and for apparatus. In 1885 a fund had been started to enable him to develop his "stanotype" process.

Among the Head-Hunters.

The recent Oxford University expedition to Borneo, which went out at a cost of £2,500 to make a detailed survey of Central Sarawak, and especially to discover the unique flora and fauna of the Borneo mountains, brought back six hundred good photographic negatives. The official photographer of the expedition used two cameras—a quarter-plate and a $2\frac{1}{2} \times 3\frac{1}{2}$ in.—with backed panchromatic plates. Two other members of the party had roll-film cameras. Developing was done on the spot. Drying was

found to be a difficulty, many negatives being injured by dust and foreign matter in the air, and the films had to be hung (securely fixed against the wind) for twenty-four hours in the roof rafters of the camp. In the open, f/16 was found best; mountain views on clear days required $\frac{1}{2}$ second at f/11, with heavy filter, and on misty days one to two seconds at f/16; and in the rain-forest six to ten seconds at f/22. The work was carried out amid such distractions as leech-bites, a plague of sandflies, and an occasional contact with snakes.

"The Amateur Photographer" EXPOSURE TABLE—JULY

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 6 to 8 a.m. or from 4 to 6 p.m., treble them. From 5 to 6 a.m. or from 6 to 8 p.m., about four times these exposures will be required.

N.B.—The times given above are by "sun time." The exposures, therefore, which are laid down as suitable for 2 to 4 p.m., for instance, will be those to be given between 3 and 5 p.m. by the clock, during "summer time."

| SUBJECT. | Ordinary. | Medium. | Rapid. | Extra Rapid. | Ultra Rapid. |
|---|-----------|-----------|------------|--------------|--------------|
| Open seascapes and cloud studies | 1/40 sec. | 1/60 sec. | 1/120 sec. | 1/160 sec. | 1/200 sec. |
| Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes .. | 1/25 " | 1/40 " | 1/75 " | 1/100 " | 1/125 " |
| Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes | 1/18 " | 1/30 " | 1/50 " | 1/70 " | 1/90 " |
| Landscapes in fog or mist, or with strong foreground, well-lighted street scenes .. | 1/10 " | 1/15 " | 1/30 " | 1/40 " | 1/50 " |
| Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage | 1/2 " | 1/12 " | 1/25 " | 1/30 " | 1/40 " |
| Portraits or groups taken out of doors, not too much shut in by buildings | 1/2 " | 1/3 " | 1/6 " | 1/8 " | 1/10 " |
| Portraits in well-lighted room, light surroundings, big window, white reflector .. | 3 secs. | 2 secs. | 1 " | 3/4 " | 1/2 " |

As a further guide we append a list of some of the best known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

The HOLIDAY OUTFIT -WHAT TO TAKE

The photographic side of a summer holiday is so important that the matter should be considered in good time. The amateur is given some hints in the following article upon this topical subject.

IT may be thought that the amateur photographer's holiday preparations are confined to taking a camera and a supply of sensitive materials. If the camera owner belongs to the class of "snapshotter" who patronises the D. and P. establishments, there is little more to be done, although there is a lot to be said, by way of persuading him to do his own D. and P. work.

For the serious photographer, however, there are several points which should have consideration well before the departure, whatever form the holiday is to take.

A New Camera.

There are some amateurs who treat themselves to a new camera upon the eve of a holiday. Whatever delights this may offer it is a plan not to be recommended. It is suggested that a better method is to get the camera well before, in order that it may be tried out, and what is more important, that the photographer may be familiar with his instrument. Cameras differ from each other, and the best results will be secured after a little experience with a particular camera has been obtained.

In the case of a new camera there may be some adjustment needed, for it does not follow that although a camera may be new that it is in perfect order. In ninety-nine cases out of the hundred it will be in faultless condition, but we have known of cases where good cameras sent from the makers' hands in perfect order have developed slight faults while in transit, or even in stock, which were only revealed when the exposures made with them were developed. Remote though these possibilities may be, they should not be ignored altogether.

The photographer who has apparatus of heavy type may decide to

take another camera on holiday. For snapshot work, and even subjects of greater importance, a 4x3 cm. film camera fitted with a lens of f/4.5 will be productive of a high average of successful negatives, and such a camera can be forgotten until wanted.

If a camera that has had constant use is to be taken on holiday it should be carefully examined. The interior should be free from dust, the glasses of the lens clean, and the shutter should be tested to work properly. Attention to these simple details may save a breakdown or bad negatives of subjects which cannot be replaced.

Accessories.

In addition to the camera the photographer with a variety of apparatus will also have to decide what to take in the matter of accessories. This will, to a great extent, depend upon the character of the holiday, the places visited, and the work which it is contemplated will be done. The various accessories should have consideration, and a list made up well in advance, so that nothing likely to be wanted will be omitted from the packing at the time of departure, which it is very easy to do.

In addition to the camera the photographer may decide to take a tripod. If colour-sensitive materials are used a colour filter should be included. A portrait attachment or supplementary lens may be useful for close-up pictures of interesting details. The exposure meter must be included; it is very important when working away from home, or with unfamiliar subjects, to get the exposures right, and it is very easy for a photographer of some experience to be deceived.

It is a good plan to write out a list of all the things that the photo-

grapher decides to take, so that it may be checked at the last moment.

If the photographer is interested in special subjects he will naturally want to take the apparatus most suitable for them. In any case it is better to anticipate requirements, except when the luggage has to be reduced to the minimum, rather than to risk photographic activities being limited by lack of the necessary equipment.

If there is any doubt as to the possibilities of the district to be visited, and he intends to take one camera only, it is a good plan to leave another outfit packed up, ready for posting, at home, or in the hands of friends, to be sent on if required. A new district may suggest possibilities, and the worker may feel that he may like to try his hand at new subjects, for which his simple camera, intended for holiday records, is not well fitted.

In General.

Sensitive materials can be obtained in all large centres, so that it is not worth while to take them. If the photographer uses plates of a size or grade not in common demand, and the holiday is not being spent in a large town, it will be wise to take a supply. Roll films and other sensitive materials that are sold as a side-line by small local general stores are not to be recommended, as the purchaser has no guarantee that they have been kept under suitable conditions.

Developing and printing should be left until the return home, although if the photographer feels that he would like to be sure that all is well with his exposures, and that his apparatus is in good order, it is a good thing to have a spool of film or a few plates of less important subjects developed by a local professional.

How to use a CORREX TANK

for securing perfect negatives

By JOY WHITE.

THE production of negatives free from spots and other blemishes is a matter of importance to every user of a miniature camera. Even with correctly exposed and developed films the presence of mechanical defects ruins the results when enlargements are made.

The solution to the problem is to do your own developing. With a Correx tank, which is obtainable from most dealers, miniature films can be developed

3. Winding the film and apron on to the holder.

with the greatest ease, and free from defects, even at the first attempt.

The only time when a dark-room is required is while the film—after removal from the camera, is being transferred to the spool in the tank. To prevent any possibility of fogging, this should be done in total darkness, and is an operation that is not really difficult. If there is any doubt, practise in daylight with an already developed film; this will show how easy it is.

First of all, the spool or film holder should be removed from the tank and the celluloid band or "apron" unrolled from it. Put the tank on one side with the lid where they can be easily found in the dark. Take the end of the film and slip it under the metal clip of the central stem of the holder (the celluloid band or apron has already been fixed to this point), so the film comes between the band and the metal fastening.

2. Putting the film with the apron on to the holder.

Now wind up the film and "apron" on to the holder. Do this by turning the latter and gently guiding both together with the hand to see that they do not twist. When this is done, put the holder into the tank and replace the lid securely. The remainder of the operations can then be conducted in daylight.

Pour the developing solution into the tank through a funnel. The developer must be of the "fine-grain" variety if really good results are wanted. Perutz fine-grain developer is very suitable,

4. Putting the holder with film into the tank.

1. The Correx outfit and spool of film.

but there are several other excellent fine-grain developers available.

Tap the tank on the table smartly, to bring to the surface any air-bubbles that may be clinging to the film and may cause spots on the negative. Rock the tank during the whole of the development, or turn the knob that fits

5. Pouring solution into the tank.

on the top of the "Correx" tank; this revolves the holder and film inside.

If Perutz developer is used, development will be complete in ten minutes at 65 degrees Fahr. Times for other developers are supplied with them.

After that time pour the developer back into the bottle, place the tank under a tap and fill with water, shake it well and empty it. Then pour in through the funnel a fresh solution of acid fixing bath. Rock again for ten minutes; the film will then be fixed and the tank can be opened. Wash the film in the tank (still on the spool); six changes of water of five minutes each is the least that will do.

When it is washed, remove from the tank and hang up to dry with "bull-dog" clips, one at the bottom to prevent curling in drying, and swab each side of the negative with a wad of cotton-wool.

6

CONTAX

THE MINIATURE PRECISION CAMERA IN PERFECTION

The Contax can do more than other Miniature cameras because it can be equipped with Zeiss lenses varying from $1\frac{1}{2}$ in. to $7\frac{1}{2}$ in. focal length, and apertures from f/1.5 to f/8. And the metal focal-plane shutter is the only shutter in miniature cameras giving $1/1,000$ th second exposure, thus making it possible to take pictures of fastest moving subjects, even when the light is not good.

ZEISS IKON LTD., 11, MORTIMER HOUSE,
MORTIMER ST., LONDON, W.1

Please send for "The Connoisseur and the Contax," also "The Ten Contax Lenses," two books just published, which will tell you all about this wonderful universal camera.

SOHO REFLEX

THE BEST CAMERA IN THE WORLD

All who are primarily concerned in possessing a camera which may be relied upon for the finest possible work under the most exacting conditions, will find in the British-made Soho Reflex an instrument which will prove equal to every demand. Full information as to various models and fittings, and the lenses available, will be forwarded on request.

In addition to its many other uses, the Soho Reflex is invaluable in the studio for children's portraiture and similar work, where quick focussing of a difficult subject is essential.

ON the COURTS

WITH A Miniature Camera

By DAPHNE BURTON.

THE modern miniature camera, giving shutter speeds up to 1/500th sec., is an ideal little instrument for securing action photographs on the tennis courts. The subject is not too easy, however, especially if the camera is a new acquisition, but provided the exposures are made in bright sunlight, and the fastest films are used, the shutter can be driven at its highest speed and good results assured.

Care must be taken in focussing beforehand to deal with figures at a certain distance only, and then confine one's attention to that distance. The focus can be altered for other phases of the game which are repeated in the same positions. The direct-vision finder should, of course, be used.

The beginner at this class of photography should confine his efforts to individual players. A good position is level with the net, where players both sides can be stalked front view.

One of the easiest actions to take is that of "serving," as the average

player has his left shoulder foremost for a fore-hand drive and his right for a back-hand drive.

Volleying requires greater skill on the photographer's part. The best plan is to focus the camera on to a section of the court and then to watch that portion through the finder until a

Reaching for a low one.

player strikes a becoming attitude in that particular area. Do not photograph ugly attitudes or mannerisms. It is not fair to the players, and produces a most uninteresting picture.

Take great care not to jerk the camera in releasing the shutter. This is very likely to happen when first attempting high-speed work with a small camera.

The best results are obtained when movements are anticipated, as there is always an imperceptible interval between the sight of an action and the apparently instantaneous pressure of the trigger.

If the photographer feels nervous about starting with an important match let him try his hand at club or tennis party play, where the speed of action is nothing like so great.

Whatever work he is attempting he should take the greatest care not to interfere with the players in any way. I have seen important points lost in match and tournament play when a

photographer who has received permission to come to the edge of the court during play has suddenly moved, or in some way distracted the players' attention momentarily.

I want to show even the utmost novices at speed work that passable results are possible even at a first attempt, so I am illustrating this article with the first tennis snapshots secured with a new small camera, and enlarged.

In this particular instance it was impossible to study background, and the photographs had to be taken through wire netting into the sun, but, in spite of these disadvantages, they make very interesting records of the experimental order.

The modern tennis costume.

player performs the same movements every time; by careful observation the exposure can be made at exactly the correct moment. Remember, though, that a left-handed player's action is entirely reversed, and will need to be photographed from the opposite side of the court to that used for right-handed pictures.

A player stands at right angles to the net for the majority of ground shots. A right-handed

COTTAGE

By F. READ.

Deserted.

THERE is an irresistible charm about the English village. Nestling in the folds of the countryside stand many a hamlet, often not more than a mere cluster of cottages, sheltering under the beneficent eye of the church and enshrouded in a quiet, peaceful seclusion far removed from the bustle and turmoil of the city.

But the day of the villages is past. Years ago they were the backbone of the nation, and though now the towns have drawn all their life and vitality away there seems to be left in every one the calm dignity of age and recognition of their former importance. The thatched cottages sit along the unpaved road in the blissful consciousness of days that are gone and a seeming knowledge that they have had their share in the destiny of the world, for from their low-pitched ceilings and nursed behind their half-timbered walls fared forth many a man in search of a larger life.

To-day the village comes to us as

At Dorchester, Oxon.

Sunshine and Shadow.

torialist. Villages are not so scarce as the average town-dweller thinks, and there are few areas in England that could be truthfully termed destitute of them. There must be some thousands scattered about the country quite unknown to the traveller along the main roads, and their isolation is probably the cause of their not being better known.

The reason for their isolation lies in the fact that the roads have left them. In the olden times when the villages sprang up according to the needs of the land they were connected by tracks; but with the growth of the towns straighter connections between two towns were made, with the result that a village out of this path was avoided altogether, with the exception of a connection by a second-class road.

HUNTING

With a Camera

The second aspect of village hunting is in securing a record of English domestic architecture that is rapidly disappearing. Some are apt to call the pictures the worker obtains of the cottages "pretty-pretty," but there can be no question that such a worker will secure in the pursuit of his quarry a wonderful collection of prints that will increase in historic value every year.

The present generation is happily aware of its responsibility with regard

A Cottage Home for two.

Gilbert White's House, Selborne

to these adornments of the countryside of which they almost seem a part, and many of the larger ones have been bought and reconditioned as modern dwellings.

But such a procedure cannot appeal quite so much to the photographer as when a genuinely old cottage is surveyed without any improvements whatsoever. Certainly the spending of large sums of money on the restoration of an old building is preferable to the erection of a modern villa in its place, but we are at the moment only concerned with true record photography.

So in the pictorial and record aspects there are two good reasons for this type of photography, and a third is the occasional glimpse one gets of a life wholly different from the townsman's existence. This has nothing to do with photography, so is really out of place here, but the side-lights the writer has secured in the course of his own ramblings add a string of delightful memories to his cottage pictures.

Technical needs for the average cottage photography do not differ from those recommended for any other landscape subject. Pan. plates or films, a moderate filter to retain the whitewashed cottage walls a lighter tint than the sky, a tripod and any type of camera, preferably of the focussing type, are the only essentials. While the work is easy it can be attended with a spice of luck if pictures are to be secured.

If there is one point more than another that requires special attention it is the lighting of the subject selected. Sunlight is generally a valuable aid, but even when it is present there is often only one particular time during the day—and perhaps a very brief time—when it makes the most of any given building. A glance at any one of the illustrations will show the value of sunlight and its resulting cast shadows.

Something to be avoided is the inclusion of any figure or "accessory" out of harmony with the rural character of the subject. Any jarring note is fatal.

Between Hook and Odiham.

Photographing CARS on the ROAD

By ARTHUR GAUNT.

"THE growth of motoring has greatly reduced the pleasure of rural photography," a clubman told me recently. "Every country lane is defiled by these vehicles—they intrude into the subject on numerous occasions. Set out to obtain a picture of a picturesque village, an old hall, or a church, and you can almost rely upon finding a car within range of your camera. Motoring has certainly introduced a new difficulty into amateur photography."

Those remarks were true to a considerable degree, of course, but there are compensations for the difficulties that have arisen in certain phases of outdoor camera work. The popularity of motoring has widened photographic scope by introducing a new field for specialisation.

If you desire a new and novel kind of camera work, try photographing cars on the road. I mean the photographing of other people's cars as they pass along the lanes, often (as the camera clubman said) "intruding" into pleasant scenes. The very intrusion, however, makes the photographs saleable. You will probably find a market for at least a sufficient proportion of your work to pay for the materials, and the hobby is fascinating.

It would be unwise to say that any camera is suitable. A

Off the Busy Roads.

Rounding the Bend.

photographer who tried to use a simple box instrument would find himself greatly handicapped, although a few satisfactory results might be obtained. Nevertheless, a high-speed camera, of the pattern required for fast sport photography, is not essential.

The illustrations accompanying this article were obtained with a comparatively inexpensive folding camera. The lens stop was $f/5.5$, and the maximum shutter speed was $1/100$ th sec. The sensitive material in each case was Verichrome film. A camera with a smaller lens might therefore be pressed into service, if faster films or plates were used.

As nearly all the cars will be photographed as they approach the camera, and not as they pass in front, the exposures need rarely

be shorter than $1/100$ th sec., unless the vehicle is travelling really rapidly.

It is an advantage that the best work is not to be done upon the main roads, where cars attain high speed, but in the winding and tree-lined country lanes, where drivers must proceed cautiously. A tripod may be used, and the work can be undertaken leisurely.

The subject should first be chosen for its attractiveness without a car, and the camera then rigged up at the spot from which a true picture is obtainable. When the subject has been satisfactorily composed, the arrival of a car may be awaited, and the shutter gently released when a vehicle reaches the spot at which it is desired. Few lanes are in these days without a car for more than a few minutes together.

In using a camera with a shutter that cannot work quickly, good results can be encouraged by confining the photography to points near the summit of hills or bends in the lanes. The reduced speed at which motorists approach these points renders a quick exposure still less necessary.

Several openings offer themselves for these photographs. The manufacturers of the particular makes of car are usually interested in photographs of their vehicles, especially the latest

Supplied in a unique patented
leather case for £1 extra.

You've forgotten your..

Rolleicord

Whatever you do don't forget to take a Rolleicord with you on holiday. It's the camera you've always longed for—built on the lines of the Rolleiflex, it is a really high-class roll-film mirror reflex at a popular price. Because of the separate finder lens, the focussing hood, the Compur shutter which is set and released in one-lever motion, and the f/4.5 Zeiss Triotar taking lens, it will give you better holiday pictures than you've ever had before. Other features include—full compensation for parallax, round focussing knob with meter scale always in ready position, frame finder for sports pictures, rigid focussing, patented film guide. Never before has it been possible to build such wonderful features into a camera at such a low price.

models. The main essentials are to show the car clearly (so clearly that the make can be easily identified), and to have the vehicle in attractive surroundings. In addition to pleasant country settings, the car may be shown in front of castles, old halls, and similarly interesting places.

Although photographs of recent models are the ones that sell most readily, there is also a market for photographs of very old vehicles that are still in daily use. The need to show such cars actually on the road will be fairly obvious.

The magazines should be carefully considered as potential markets, too. The ordinary (non-motoring) periodicals and monthlies, as well as the publications of definite motoring interest, such as the *Austin Magazine*, should not be overlooked.

Provided the photographs show something of (say) historic interest, as well as the car, they are often acceptable. The non-motoring magazines may have published in the past photographs showing the same place, but new prints showing a car are considered carefully. One editor told me that the inclusion of a modern car imparts an up-to-date touch to the subjects, a touch which is lacking in the older photographs.

With these several markets in view, a profitable afternoon may periodically be spent in photographing attractive and interesting places near home, ensuring that each negative will include a car. And this pecuniary aspect of car photography is additional to the fascination of mastering a phase of camera work which is both novel and modern.

FAKING and Photography

By
SIGURD MOIR.

AN ARGUMENT THAT STARTED WITH THE BEGINNING
OF PICTORIAL PHOTOGRAPHY AND IS STILL RAGING.

THE fact that photographic "faking" is condemned by one faction of successful workers, and upheld by an equally clever rival fraternity, is in itself sufficient to indicate that there is something to be said both for and against the practice.

Speaking without any bias, we might say that the exhibition results show that faking certainly has its advantages. And we may further attempt to justify its use by reminding ourselves that stratagem and artifice are resorted to in most hobbies, without, however, creating such divergence of opinion as that which exists around their adoption in our own fascinating art.

Members of the "purist" faction condemn faking because they themselves indulge in no artificial contrivances beyond the very few which they consider to be legitimate. Moreover, whilst some "straight" workers declare that faking is in no way of advantage, most of them are content to attack the practice on æsthetic grounds alone.

Simpler Devices.

Now, since both factions are in agreement as to the validity of the simpler devices, we may assume that up to a certain point artificial treatment is generally endorsed. It is only when this point is passed that the photographic purist begins to exist.

Amongst the simpler devices referred to, we may include everything connected with composition, selection and the exposure. How faking can intrude into any of these operations may at first appear difficult; yet, when we realise that merely by the use of a light filter we can bring distant objects as clearly into view as those occupying the immediate foreground, the whole thing becomes patently clear. Even more glaring is the

example of juggling with the exposure—a trick that few purists would consider beneath or even beyond them.

Another simple device consists of using our friends as figures in landscape and other views. And although the ultra-purist will emphatically repudiate any suggestion of faking in this, we can only say that—so far as the actual result is concerned—there is hardly any difference between the device referred to and that more daring one of inserting the figure after the negative has been made.

Avoidable Faking.

Now, faking in its more advanced forms is not easy, and there is little point in doing the work when it can be avoided. Amongst these more advanced forms we must, of course, include ordinary retouching with the knife and pencil—an operation that can be reduced and even eliminated by the use of panchromatic materials.

Carelessness, too, especially in connection with the making of the negative, can be responsible for much after-treatment. Only by studying the pictorial values of the lighting, background, unity, perspective and a host of other details can much arduous correction be avoided.

Above everything, we should never forget that seldom can any amount of careful faking render a picture quite so charmingly as "straight" methods—when they are available and properly applied.

Further Hints.

When it is found impossible to avoid the necessity for subsequent retouching, steps should be taken to keep the required after-treatment down to a minimum. Nor should any attempt be made to fake a picture

that is obviously of no value—unless, indeed, it is desired to secure some practice in the art.

A negative or print, to be worth consideration, should possess certain essentials. For instance, the *nucleus* of a picture should be there, and this should appear undestroyed in the finished work. If, for any reason, this nucleus be absent, or at fault to such an extent that the after-treatment will be apparent, the work is best abandoned. Scratches and pinholes do not, of course, fall within the scope of this article, yet their presence can affect the treatment.

Every attempt at faking must be made with the object of producing a positive improvement in the picture. It is far better, for example, to leave alone a "bald-headed" sky than to print in a heterogeneous cloud study lighted, say, from the opposite side to its dependent landscape.

Conclusions.

Faking, then, should be an instrument for good in our hobby. If, instead of relying upon faking as a grand remedy for carelessness, our advancing workers were content to perfect their technique and to accept the broader views of pictorial arrangement there would be fewer deserters from our ranks. Most of these workers are seriously interested in photography; hence, to restrict their hobby to a haphazard routine—with a knife and a box of leads at the end of it—is merely to invite this lapsing of interest.

We need not be purists to press for a variation of this condition, for by the adoption of these principles alone can faking cease to be abused. And with the cessation of abuse, novice and intermediate worker alike will embrace the devices with the greatest confidence.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

HOLIDAY PHOTOGRAPHS.

TO give myself an opportunity of offering a few more hints about holiday photographs I am going to refer to a flying visit to a little Cambridgeshire village. I was there for less than two whole days, and secured a dozen subjects, although the weather was not by any means favourable for what I wanted.

Fig. 1.

In a way, the photographs I took are not of the usual holiday type at all; but I want to suggest that even on a single off-day we may find something worth recording. Some of my subjects were to illustrate the decay and ruin of many of our English farms—hardly cheerful enough a theme to associate with holidays.

The point I wish to emphasise most just now is the strong advisability of having a tripod available. It is a curious thing how reluctant some photographers are to follow this advice. I was using a $3\frac{1}{2} \times 2\frac{1}{2}$ camera, and a tripod quite adequate for my purpose was one of the brass

telescopic kind, compact but strong. It is a mistake to get one of these of inferior quality; it is sure to be unreliable in several ways, and a good one is not only more satisfactory, but more economical in the long run.

With the camera on such a tripod I do not consider it safe to fire the shutter by hand. Movement is almost inevitable. I always use an antinous (wire) release, and do not put my hand on the camera at all. I have seen some small cameras fitted with a wire release about two inches long. This is a mistake. In such a short length the cable is not sufficiently flexible, and taking hold of it will almost certainly move the whole camera. I like a cable six or even eight inches long, as this can be kept slack, and the shutter operated without any risk of movement.

One of the subjects I was after was a corner of a mill, so old that the original building was working when Doomsday Book was compiled. I once saw this corner when it was draped and festooned with cobwebs in which flour dust had settled, but when I visited it this time it had been swept and garnished. However, it was quaint and interesting, and the sun was shining in for the time. I put the camera on its tripod, arranged the subject with a frame finder, focussed by scale, and gave an automatic exposure of one second at $f/11$. A photographic companion was surprised at the shortness of the exposure; but I

was using a fast film, and regarded the interior as a light one. The result is shown on one of the art pages.

To an old cart-shed outside the mill I gave an identical exposure.

Fig. 2.

This is Fig. 1. The sun had ceased to shine, but pretty good diffused light was coming in through the open ends, and gaps in the roof and sides. Although it was more of an outside subject than the first there were heavy shadows under the roof, and

Fig. 3.

Fig. 4.

these had to be allowed for. It was one of those subjects for which I like full exposure and shortened development.

Fig. 2, a simple subject, was taken under mild evening sunlight, and here I needed no tripod, but just gave a hand exposure of $1/25$ th of a second at $f/8$. Simple as this subject is there is some value in it. Those of us who have artist friends know how glad they are of the exact details of such a useful landscape accessory. This type of cart is many generations old; but not far from where it was taken there is an ancient smithy where the younger generation were making more modern carts with rubber-tyred wheels of the lorry type. Even the old farm cart is passing.

So, I fear, are many of the old thatched cottages like that seen in Fig. 3. "Slum" dwellings are to be

abolished. In the little village of which I am speaking some are being pulled down, and replaced by modern mansions of which Fig. 4 shows a fair sample. It is a repulsive brick box, with a slate lid, and the happy owner can stand at his front door and put his hand in the roof gutter. There is the "rustic" fence, though. Personally I prefer the simple old fence of Fig. 3.

I wanted the Fig. 3 subject for a lantern slide to show the light on the garden vegetation. Here I had to stop down to $f/16$, and used a four-times filter, and once again I resorted to the tripod and the useful one-second exposure. Incidentally, I foolishly used a lens hood, which, with the small stop, cut off a good deal of the subject; so there will be no lantern slide after all.

The brick monstrosity was given a hand exposure, as I had no bomb with me. I could also have taken Fig. 5 without the tripod, but here I used it for another reason which is not so well known as it deserves to be.

I wanted this subject brightly lighted, but the sunshine was intermittent, and only broke through for a moment or two at long intervals. So I put the camera on the tripod, focussed, adjusted the stop, and set

Fig. 5.

the shutter. Then I waited. As soon as there was the expectancy of a gleam of sun I took hold of the release and stood by. This enabled me to fire the shutter at just the right moment. I have often adopted this course, and have, thereby, secured subjects which I should have lost if I had had to raise and sight the camera. Moreover, one's whole attention can be given to the subject, and not part of it to the camera. In ever so many ways a tripod is a boon. W. L. F. W.

How I make my EXHIBITION PICTURES

No.
CCXXXVI.

—
Mr.
C. W.
CLARK.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"WHEN I first took up photography some twenty-five years ago I began with a quarter-plate boxform camera. For several years I was content to snapshot all kinds of subjects; and this I did with a fair amount of success. But as time went on this sort of photography lost its appeal and interest, because I began to realise that I was just a snapshotter, and had no real object in view in my work.

"As I admired the works of some of the masters of photography I became really dissatisfied with my snapshotting, and wondered if it was possible for me to do work like that of the *real* photographers. I decided to make the attempt. I obtained a field camera, and started working on small subjects—still life. This was the turning-

point in my photographic career. I began to study the varied effects of lighting from different angles.

"After gaining some useful knowledge in this way I decided next to study development. Space does not permit of my going into full details, but I must state that in negative-making I use 10 per cent pyro developer. After much careful study and experiments, aided by hints given me by an old friend and master in the graphic art, I discovered that I was able to control development with some degree of effectiveness. This is done by varying the quantities of pyro, alkali and restrainer according to the type of subject, lighting and exposure. It is generally understood that the negative is only a means to an end; but I am afraid many of our photographers are apt to treat negative-making too lightly, and depend largely on retouching and 'dodging.'

"Before I make an exposure I carefully examine the shape, colour and texture of the articles that are to form my still-life group. This is arranged, and my camera set up. Having satisfied myself that the viewpoint and focus are satisfactory, I pay attention to the lighting. By the time these preliminaries are completed I have in mind the kind of positive I require. But before I can get that positive a negative has to be made which is capable of producing it.

"Having decided upon the type of negative I make the exposure, and then the latent image has to be developed out. I usually start off with a very slow-working developer, then as the image appears I accelerate or restrain the solution according to the desired amount of contrast or density required for the production of the positive I have in mind.

"With my class of work the negative is all-important, and my one aim is to make a good clean negative so that no retouching is required. My negatives are usually made on quarter-plates, from which I enlarge. The enlarging apparatus I use for all my exhibition work is of the daylight type, designed and constructed by myself.

"I use only the best quality materials. I am not a pictorialist, and the secret of my success—and how I make my exhibition pictures—is technique, hard work, and a determination to encounter and overcome all set-backs and swim through at last."

JUST CROCKS.

By J. H. CLARK.

1.—"The River Glideth at his own Sweet Will."
By J. B. S. Carr.

2.—"The Old Tithe Barn, Alciston."
By Miss B. Wagstaff.

3.—"Loch Lomond."
By J. A. Stirling.

4.—"Early Spring Morning."
By A. E. Fielding.

5.—"Lone Tree."
By C. Seldon.

6.—"Through the Archway."
By Wm. S. Cowan.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

THE fine sky and able employment of the single tree in No. 5 of the prints on the opposite page, "Lone Tree," by C. Seldon, illustrate what can be done with the simplest of materials, given the right time and the right effect. The tree is very dainty in its grace; it is set forth by the somewhat stormy sky behind, and the reproduction fails to record all the delicacy of tonal gradation which the original possesses to an exceptional degree.

An Element of Grace.

The choice of the single tree, as will be readily understood, is far more likely to suggest the attribute of grace than a greater number, and that it does so is easily seen.

Its beauty of form is well revealed, and, in conjunction with the horizontal lines of the clouds, creates a suggestion of design that aids the pictorial appeal. It is doubtful, however, if the somewhat central position in which the tree is placed is calculated to display it to the best advantage. In the sky, it will be observed that a rather light note occurs in the top right-hand corner, which, once noticed, seems to draw the attention in a way that its placing certainly does not warrant.

This feature, as well as the central placing, could be corrected, quite as much as is necessary, by the simple expedient of trimming a quarter of an inch from the right, when not only does the tree seem to fall into its proper place, but the whole thing takes on a more finished and complete appearance, and its full appeal becomes manifest.

If, after the trim has been effected, there still seems to be too much light at the top corner, its tone could be lowered by a little local extra printing, and this will probably be found advisable, for, with the corners slightly subdued, the interest is more concentrated in the part that matters.

Concentration of Appeal.

If the light at top left in No. 4, "Early Spring Morning," by A. E. Fielding, be disregarded, and it is only minute, the gain in concentration so afforded can readily be observed.

All the other corners are lower in tone than the more central portions,

and, in consequence, the attention can rest upon the group of trees on the left which form the principal item. The light at fault could be removed by retouching on the print.

The same principle, but carried to a much greater extreme, is responsible for the way the figures stand out in No. 6, "Through the Archway," by Wm. S. Cowan. The dark frame provided by the arch so concentrates the attention on the light it encloses, that everything within that light area attains a significance that is exceedingly high, and the figures, aided again by the contrast of their dark against the light, stand out with a vivid and vital force.

Their position, perhaps, may be somewhat too much inclined to the right, and there is a suspicion of an out-of-focus effect on the extreme left, but both of these minor deficiencies could be remedied by trimming three-eighths of an inch from that side.

The Virtue of Trimming.

If a sufficient margin be left all round the subject proper, such as may be obtained by selecting a viewpoint well back, it gives us something over and above what is actually wanted to play with.

Should, by any chance, we have overestimated the amount that will be included, the extra margin will doubtless enable us to save the picture, or it may be that the finder shows too much, in which case the same effect may be expected, but, if it actually happens that we habitually include more than we need, we have the power of adjusting the arrangement to suit our considered judgment in after-treatment.

We might think, at the time of exposure, that the best place for a figure was towards the right-hand side, but, after making a trial print, find that, through something or other, a position inclined towards the other side would be better. If there be the margin available, the alteration may be made, but if not, and the defect is serious, it may mean the losing of the subject.

In the case of No. 2, "The Old Tithe Barn," by Miss B. Wagstaff, just a bit too much foreground has been

included. The amount is just that much by which it is overlapped by the print beneath, but, had only the visible portion been included, it is quite conceivable that, by some mischance or other, a defect might have made an appearance and prevented the inclusion of an adequate foreground.

That the appropriate treatment has been adopted is evident from the fact that neither in lights nor darks is there any visible lack of gradation. Development of the negative must have been curtailed or the subject printed on a softer grade of paper than usual in order that those contrasts might be properly rendered. As the print stands, they are just about correctly represented, and, technically, the work achieves a high standard.

It also betrays an appreciation of the value of an effect, and, though the subject may not appeal to everybody, there is no denying that it has been managed very well indeed. No. 3, "Loch Lomond," by J. A. Stirling, is likewise of a high degree of craftsmanship; though, as the contrasts are normal, special treatment does not appear to have been called for. There is a nice tone in the sky; distinction between it and the brighter light of the steam issuing from the funnel of the steamer and the dark notes is by no means overdone.

The Darker Foreground.

A greater depth of tone in the foreground would, perhaps, afford a better feeling of stability, and something might be done to improve matters by sunning down the immediate foreground, but the need for a darker foreground is more plainly to be seen in No. 1, "The River Glideth," by J. B. S. Carr, where the great weight of the arch above makes the print appear top-heavy.

However, to make any adjustment in a case like this would invite a suggestion of falsity, and it had better be left alone. Whether or not the subject would be anything at all without the arch is questionable, but it is possible that something might be done a little farther along the bank with the bridge in the distance.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"CORNER OF ENGLAND," by J. H. Clark.

THE opportunity of actually including the sun itself in a picture does not often occur, and, owing to certain peculiarities in the way a lens sees a strong light, it is rarer still that it is possible as an element in a pictorial composition, for it might either be rendered as an indeterminate blob of light tone or one with several circles surrounding it, and, in other cases, a ghostly image or streaks may make an appearance.

The Source of Light.

In this instance, however, much of the liability to drawbacks of such a character is avoided by the fact that the sun is partially veiled by light clouds, and also that it is only just above the horizon.

The veiling restricts the intensity of the light, and, having regard to the angle in which it is seen, the depth of atmosphere through which its rays have to pass is much greater than when it is higher in the heavens, which, again, imposes another limitation, but in a lesser degree. For all that, it remains the lightest note in the picture, and, as such, claims the major share of the attention. For that reason, it can be viewed as the centre of interest (1).

The motive, however, seems rather to be the feeling of luminosity, which arises more from the light on the water than from that minute spot of light. The sun may be the source of light, but the light on the water comes more from that reflected from the upper portions of the sky than directly from the sun itself, although something of its direct influence can be traced. That part of the sky is outside the scope of the picture, and, as will be observed, that which is included is appreciably lower in tone.

With the brighter light on the water, which is an inversion of the usual state of affairs, the luminous impression is very powerfully suggested, and the picture gets across in a way

that most presentations of sunset studies seldom do.

Localisation of Effect.

Nevertheless, the sun plays its part in the conveyance of the feeling of luminosity in that, as the brightest light, it localises the effect and prevents it from appearing too widely dispersed.

It lends concentration to an effect

right does something, if not very much, to counter the inevitable suggestion of a lack of balance. The tone in the sky also seems to be deeper on the right, and this again is a further help, but the weight on the left remains unbalanced. Nothing except the presence of an accent on the extreme right would be likely to correct the impression, and, as the picture stands, it can only be assumed that there was no possibility of any such accent making an appearance.

A small boat, a vessel, or a rock, if placed in the lower half of the right-hand side, about one inch from the edge, would do very well; but, as often happens, there was none there when it was wanted.

The presence of the rock in the foreground (2), however, does suggest a possibility, though whether feasible or not is impossible to say in the absence of exact knowledge of the locality, for, if by moving a good way to the left, that rock could be placed on the right-hand side, the drawback would be overcome.

The Difficulty Surmounted.

The line of sight would have to be altered a little as well, and that would mean that, while the far cliff (3) would retain its present placing, the sun would be more over to the left; but this would tend towards a greater concentration and therefore be an advantage.

It might be necessary to include a bit more of the cliff and to dodge about a little to adjust the relative positions of sun, cliff and rock; but, if the alteration is at all possible, it is likely to afford a better arrangement than at present shown, and the difficulty would be surmounted.

Nevertheless, and despite its deficiencies of arrangement, the work shows a not inconsiderable degree of promise, for it does, at any rate, deal with such a hackneyed subject as a sunset in an unhackneyed way.

"MENTOR."

that arises from a comparatively large area, and does as much as possible to unify the arrangement of the composition. It is, perhaps, somewhat centrally placed, though not precisely on the centre line, and because it is somewhat to the left, the right-hand side of the picture has a deeper tone than it would were the sun more inclined to that side.

As is usual in coastal scenes, all the weight comes on the one side, and the deepening of tone towards the

A PIOUS PILGRIMAGE

By our Special Representative at the Fox Talbot Centenary at Lacock Abbey, Saturday, June 23rd.

AND our fathers that begat us." We wondered whether the shade of old Fox Talbot was wandering about his ancestral halls at Lacock Abbey when the devout made pilgrimage there on Saturday week to commemorate the centenary of photography. The centenary, to be exact, of the production of photographic impressions on paper.

It was in 1834 that Fox Talbot was making experiments with his paper in a camera obscura, but only succeeding in obtaining a faint impression. The outline of the roof and chimneys against the sky, he said, was marked enough, but the details of the architecture were feeble—this after an exposure of several hours—and the parts in shade were left blank, or nearly so. But that was the beginning of things, and when the amateur presses his button let him remember it.

Well, there must have been a couple of hundred of us there. Who knows what Fox Talbot would have said had he seen his grounds invaded by a horde of camera people who were photographing one another as merrily as cricketers bowling one another out—he who a hundred years ago fringed those same grounds with his battery of funny cameras, which made his wife complain that she could not go out of doors without encountering his "mousetraps"?

Human after all.

In common with many other people, we have had an impression that Henry Fox Talbot, with all his cleverness, was a dour and austere individual, but Prebendary Clark-Maxwell, his grandson, revealed him in a very different light. Here is Talbot engaged in all manner of experiments, lifting the curtain of the photographic era, while his little children play battledore and shuttlecock in his lofty hall. When the noise becomes quite unendurable, no reproof arises from his lips; he only gently shuts the door.

Here he is, an old man, setting geometrical problems for his grandson, or delighting him with the effect of salts sprinkled on a spirit lamp. And surely it comes home to every one of us when it is revealed that photography began its history on a honeymoon. That should make it appeal to romantic young ladies for all time.

It began on a honeymoon in 1832, the year of the Reform Act, when Talbot and his bride were sojourning in Italy, and he made attempts on the scenery of Lake Como by means of pencil and tracing paper with a camera obscura. Disgusted with the result, he turned his attention to the path which led to photographic discovery. One wonders a little what Mrs. Talbot had to say to it all.

A Many-sided Man.

It was not only in photographic invention that Fox Talbot was distinguished. He was interested in botany,

in astronomy, in numismatics, in Biblical archaeology; it was he who, deciphering the hieroglyphics on some small glass figures which were deposited in the tombs of the Egyptian mummies, lighted upon the name, to his astonishment, of "Frederick William King of Prussia."

In mathematics he began early. His grandson told us, in the intimacy of Fox Talbot's own library, that it was on record that at the age of four he solemnly complained to his mother that Betty, his nurse, was very disobedient. "I asked her to revolve upon her axis, and she will not." It was not mathematical zeal which led him at the age of eight to write home from school for a cake and some beer—the cake would do later on, but he wanted the beer at once! Let us add at once that he was a most abstemious man, standing aloof at Cambridge from all the dissipations of his fellows and even from their usual games. There is a certain implication in a letter home, "They have begun cricket." Why trouble about bat and ball when far more interesting things, like chemical solutions and the "pencil of nature," await one's quest?

The First Photograph.

Among the crowd of exhibits arranged in the galleries of Lacock Abbey was probably the oldest photograph in existence. It was a small print hardly larger than a postage stamp, dated, in Fox Talbot's own handwriting, 1835.

The photograph—a negative impression only—was of the window of the library, the very place in which the centenary meeting was held, showing the tracery of the window and the diamond leaded lights against the sky.

One interesting point is that when some of these early photographs were recently brought out of their treasure boxes by Miss Talbot—the granddaughter of the inventor, and the present lady of the manor—they began to fade on exposure to the sunlight. They had borne a hundred years of darkness, but they could not bear an hour of brightness. However, they were re-developed in a bath of one of the present-day developers, and it was possible to revive what was practically blank paper and bring back quite a visible image again.

That exhibition at Lacock Abbey also contained some of the earliest photomicrographs. Some of Fox Talbot's first experiments were made with a solar microscope, an instrument now in the collection at South Kensington. Nearly a hundred years ago he was making photographs of wood sections magnified seventeen times linear dimensions, and here they are still to be seen by all and sundry.

Let us pay a tribute to those to whom the success of the centenary is due, especially Miss Talbot, Mr. A. J. Bull, the President of the Royal Photographic Society, and Mr. Herbert Lambert.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

SOUTH LONDON CLUB.

SIR,—Your note in a recent issue of "The A.P." regarding waiting lists of Camberwell Camera Club.

The John Ruskin Camera Club holds its meetings Tuesday and Friday evenings in the same district at the Walworth Men's Institute, Beresford Street, Camberwell Gate, S.E.17, and has facilities for as many new members as care to join, the annual subscription being 6s. 3d., inclusive.

Please publish this for the benefit of homeless photographers in South London.—Yours, etc., J. GIBBS, Hon. Secretary.

SKY FILTERS.

SIR,—Mr. F. C. Hunt's letter in your issue of May 23rd regarding sky-shade filters cannot go unchallenged. I feel sure he can never have tried a sky-filter or he would not be so dogmatic as to their uselessness.

Three years ago I bought a set of filters, including a graduated sky-filter. I used the sky-filter in front of the lens of a reflex camera and found the results were excellent. With a reflex camera one can see how far to push them down so as to just shade the sky. They certainly do not act as a filter over the whole of the plate, and do not slow-up exposures. Anyway, this is my experience.

I have seen criticisms of sky-shade filters in your journal before, and am aware that many professionals jeer at them, so during my Easter holidays I abandoned their use and used an ordinary "one-and-a-half times" filter—alas! it might just as well have been a piece of clear glass as far as its effect went on "Selochrome" film—my skies are non-existent!

I am going back to the sky-shade filter, and if the results I get do not agree with theory, so much the worse for theory. A pound of practice is worth a ton of it.—Yours, etc.,

EVAN C. MACPHERSON.

SIR,—As the actual maker in its most literal sense of graduated light filters, I observe with interest the sudden bursts of disapproval and disparagement that arise from time to time in the photographic Press of these most useful filters.

I wonder if those critical folk ever place a graduated filter on the lens of a camera fitted with a focussing screen, and watch the effect? The tinting of the sky becomes apparent when the filter is about half an inch from the lens, and in a good practical mount it is almost impossible to get it nearer.

According to the reasoning of these critics it would be immaterial if a plain filter were patchy or its colour uneven, covered with pinholes or other defects, the result would be the same as if taken through a perfect filter!

I hardly think a professional cinematographer cameraman could use a filter half deep red, steeply graduated so as to leave half clear glass, and not observe the increase of exposure and resulting over-correction of colour that would result, were the theory of all-over tinting correct.—Yours, etc., G. G.

MEDIUM FOR CLEANING DISHES, BOTTLES, MEASURES, ETC.

SIR,—The simplest and best way is a mixture of common salt with vinegar.

Pour a quantity of salt in the bottle or in the dish and add a little vinegar. By shaking and rubbing, all chemical stains are removed. The bottle or dish is then washed with clean water.—Yours, etc.,

R. ROTHENBÜHLER.

Palais Fédéral, Berne (Switzerland.)

CAMERA PRICES.

SIR,—Studying the advertisements in a recent number of "The A.P." it appeared to me that not only photographic materials but cameras were too highly priced. Relatively they are much in excess of pre-war prices, although the cost of production owing to improved methods of manufacture should have dropped very considerably.

When I commenced photography upwards of forty-five years ago most cameras, if not all, had to be made to a great extent by hand. This skilled work took time and had to be

paid for accordingly. Now, on the contrary, even first-class cameras are essentially pressed metal boxes which can be turned out by the hundred thousand with little or no labour cost. Indeed, once the dies are made, manufacturers of metal boxes and die castings will turn them out at little above the cost of the raw metal.

This seems to apply to all trades except the photographic. Even in this trade cameras could be made to be given away with cigarettes and newspapers.

In another line of business I remember that when a famous safety razor was first issued the holders were sold for a guinea. Many people paid this price. A few weeks ago anybody purchasing a tube of shaving soap was presented, gratis, with an improved form of the erstwhile guinea safety razors.

I wonder if something like this will take place in photography, and if so we shall not then have so many super high-priced cameras offered as "once used" in the second-hand columns of your paper. Of course, if the manufacturers of these articles, mostly foreign, can get the prices they will, but not from me.—Yours, etc.,

"NOMAD."

EXPOSURE METERS.

SIR,—I have read with interest Mr. C. W. Martin's letter in a recent issue. On a discussion of the relative merits of the different types of exposure meters I do not propose to embark, but it appears to me, from his remarks about landscape in the fifth paragraph of his letter, that Mr. Martin is unfamiliar with the sensitive-paper type of meter. At any rate he does not mention it.

If three separate plates are exposed—on the distant hills and sky, the middle distance, and the foreground—for the same time in each case, I am inclined to agree with Mr. Martin that two of the resultant negatives would be useless. This result, however, is avoided by following the makers' instructions to give half the calculated exposure for distant landscape, and to give one and a half times or twice the calculated exposure for foreground.

With the remainder of Mr. Martin's letter I am inclined to agree, but I would like to know why, in the paragraph referred to, he is willing to bet that "probably all three" plates will be useless as negatives.—Yours, etc.,

P. J. C. WESTALL.

SURGICAL SPIRIT.

SIR,—Surgical spirit mentioned in your issue for June 6th, page 507, is no longer authorised by the Commissioners of Customs and Excise.

As from March 15th the following only are allowed (No. 1 would most certainly be very objectionable):—

| | I | 2 |
|---|--------------|--------------|
| Castor oil | 2½ per cent. | 2¾ per cent. |
| Methyl salicylate | ½ " | " " |
| Diethyl phthalate | 2 " | 2 " |
| Mineral naphtha | " " | ¼ " |
| Industrial methylated spirit to 100 | 100 " | 100 " |

—Yours, etc., E. HAROLD BUTLER.

WINDING FILM.

SIR,—I must admit that the procedure advocated by Mr. Edmonds in "The A.P." for June 13th for ensuring that the film in a miniature camera is tightly wound seems to me to be rather risky, especially with fast panchromatic material.

I experienced similar trouble with an expensive miniature camera, both with the film not winding up tightly on the take-up spool, and with its springing loose on the feed spool. This seemed to be, due to insufficient friction at the latter point, and the remedy, which I have used with complete success for two years, was to place a washer cut out of a tram ticket at each end of the new spool when putting it into the camera. The hole obligingly punched in the ticket by the conductor will just push on to the spool ends!

Hoping this hint will be of use to others who have had this trouble.—Yours, etc.,

JOHN MALTBY.

Results obtained with this new model Ciné are truly astounding. The "Birmingham Film" exhibited at the B.I.F. was photographed with one of these cameras. You can pay a lot more for a Ciné, but you cannot obtain better results. **75/-**

Wallet containing 3-ft. and 6-ft. Lenses, also Sky-filter. For use on Coronet Cine Camera. Supplied complete in compact morocco grained leather wallet which slips easily into vest pocket. Complete **7/6**

E.D.8. EVERY-DISTANCE 8 BOX CAMERA. Most compact of all box cameras. Fitted with every-distance lens, Patent No. 377036, which yields beautiful sharp pictures from all distances from 6 ft. to infinity. Latest type one-way shutter, 2 brilliant view-finders, solid leather handle, and silent winder. Covered with morocco grained leather cloth. To fit films size $3\frac{1}{2} \times 2\frac{1}{4}$. WESTON *Exposure Meters*

MODEL 617 Type 2 gives dead accurate readings for still or ciné work. The amount of light reflected at the time of exposure is converted into correct stop and shutter reading—you simply can't help being right—and the amount you save in films and money will soon justify the cost of a Weston. No batteries—nothing to wear out. This model is $3\frac{1}{2}$ in. long, $2\frac{1}{4}$ in. high, $1\frac{1}{4}$ in. thick and weighs only 8 oz. Supplied complete with shoulder-strap and leather case for £11 0 0

MODEL 627 for Ciné Cameras. You simply point the Weston to your subject and you get dead accurate exposure reading. £8 10 0

MODEL 627 LEICAMETER indicates without calculation correct exposure for all Leica work... £8 10 0

Easy Payments—first of 9 equal monthly payments secures your Weston. Simply add 5 per cent to cash price and divide by nine.

Generous Part Exchanges—fullest allowance made on your present apparatus in part exchange for a Weston. Lists from Dept. "A"

AMAZING VALUES Offered this week by GAMAGES

THE ROLLEICORD

Made by the world-famous makers of the Rolleiflex, Messrs. Franke and Heidecke. Features include:

- ★ F/4.5 Zeiss Triotar "taking lens" and brilliant Heidoscop anastigmat viewing lens.
- ★ Special one-lever Compur shutter for setting and releasing in one movement. Speeds to 1/300th second.
- ★ Compensation of parallax. What is shown on the ground-glass screen appears exactly on the film.
- ★ The Price is low considering the Rolleicord has features found on cameras costing £20 and upwards. Gamages offer the easiest of easy payment terms.

Cash price **10 Gns.**

Zeiss Ikon's LATEST MARVEL RANGE FINDER 520

Inspect this wonderful camera at your leisure at Gamages. No obligation to buy. It is the famous 530 model Ikonta (16 on 2 1/2 x 3 1/2), and is now supplied with coupled rangefinder for dead accurate focussing on every occasion. F/3.5 Tessar and D.A. Compur. of course.

Price **£16:12:6**

Used Cameras—Super Bargains

- 3 1/2 x 2 1/2 Zodel Reflex, f/4.5 Tessar, revolving back, 2 D.D. slides, F.P. adapter **£8 10 0**

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

How to Use Photo-Electric Meters

When using meters of the photo-electric type, it is extremely important to avoid mishandling. Careful and unvarying methods alone must prevail if the full efficiency of the apparatus is always to be enjoyed.

PHOTO-ELECTRIC exposure meters now represent the last word in mechanical accuracy. They give correct readings under *almost* any and every condition, and—assuming proper development—the negatives produced with their assistance are *nearly always* of the finest possible quality. The words in italics are meant to indicate that the meters in question—although very accurate—are not entirely magical; they are able to measure the intensity or photo-active strength of the light, but they cannot be expected to appreciate the limitations of plate and film emulsions.

For this reason, a subject full of neutral tones and only slight contrasts frequently appears to photograph with greater veracity than another in which the contrasts are more strongly marked. In the first case, the meter has been able to give a reading that applies to the whole of the subject; in the other, the tendency is for the shadows to come in at the expense of the high-lights—as in a mild instance of over-exposure.

This is not due to any fault in the instrument itself. Rather is it because in any subject of mixed lighting and colours we cannot apply an exposure which is accurate for them all. And although the photo-electric meter gives us an accurate *mean* reading, this is always found to be more in error for the higher illuminations than for the shadows—such is the nature of emulsion "latitude."

Remedies.

The simplest remedy for this annoying and often unaccountable trouble is to give an exposure slightly below that indicated by the meter whenever great contrasts appear in the original. An exception should be made in the case of amateur cinematography (reversal) practice—where the actual reading should generally be adhered to.

There is another and a more satisfactory remedy—which will appeal in particular to the worker with leanings towards pictorial photography. This consists of selecting from the subject just those tones which it is desired to have predominant in the picture. These tones only should be taken as a basis for the reading.

Similarly, where it is desired to soften or subdue certain parts of the picture, the corresponding tones can be ignored when taking the reading.

Special Precautions.

When using meters of the photo-electric type, it is extremely important to avoid mishandling. Careful and unvarying methods alone must prevail if the full efficiency of the apparatus is always to be enjoyed.

In the first instance, the photographer should make sure that his camera is working properly, i.e., giving the actual exposure for which the controls are set. Then he should develop the habit of taking his readings from a point not far removed from the lens of the camera—and this is especially important when the subject is a close-up.

With some models, there is a tendency in poor lighting for the indicating needle to remain immovable. If the meter be equipped with an "amplifier," this can be brought into operation and the necessary reading secured; but in no case should the photographer approach closely to a lighter portion of the subject without also deciding to operate

his camera from the new viewpoint.

Shaking or knocking the exposure meter will not cause the needle to measure an exposure where insufficient light exists. For this reason, harsh treatment cannot possibly do any good and may easily result in harming the apparatus.

Special precautions must also be taken to hold the meter perfectly level when taking any reading. It is quite fatal to measure only the bright light from above a wall or bank of trees when it is desired to include no sky whatever in the actual picture. Similarly, readings for "against the light" exposures should not be taken without first fitting the meter with an efficient light-shade.

Usually, the latest models of any apparatus are improvements upon earlier types. This is especially the case with photo-electric meters—though it cannot be said that there is any great difference between recent models priced round about the same figure.

A good action subject for amateur ciné workers that is always available at the Lido in Hyde Park during the summer months.

Finding a Suitable Studio for Filming

IT is at this time of year that most amateur ciné societies start to get really busy and the question of a suitable studio crops up. The larger and more fortunate clubs will, of course, adopt the plan of having a permanent studio, but others will have to content themselves with the occasional hire of a hall or large workshop for shooting their larger sets. In any case, a central position should be chosen to facilitate members getting to and from meetings easily. In most large towns, after a little hunting, it is usually possible to find such a building.

Studio Construction.

For those who wish to establish a permanent studio there are several points to be carefully considered before finally deciding upon the suitability of the premises. The ideal plan is to build; but, of course, in most cases this would become far too expensive. The actual size of the stage naturally depends upon circumstances, but quite big scenes can be built in a studio, say, 20 x 15 ft. Most professional film studios are square in shape, although this is not of vital importance; the long narrow type of room should, however, be avoided, the triangular shape being much more suited. The fault with many amateur studios is that they are far too low. A good limit of headroom is of great importance to provide for long shots and top-lighting, which plays a big part in good photography. A ground floor building is far the best, as it makes the

getting in and out of scenery easier; if big doors are available the view will often serve as a natural backing for windows, etc. Needless to say, a good solid wooden floor is necessary for bracing flats, while it should also be tested for level as this may interfere with tracking shots.

In the case of the amateur the stage will also be used, no doubt, for set building, projection and many other purposes; but when actual shooting is in progress it is advisable to keep all unnecessary stuff out of the way to give plenty of working space; exits must always be left clear. Electricity will be required for lighting, and fortunately quite a large number of the modern incandescent lamps can be run off an ordinary main. But unless there is an expert amongst the members of the society it is as well to call in the electrical company to test the wires and advise them on the amount of power wanted. All wiring should be carefully done, and if a large load is to be used it is as well to fix up a switch-board. Running water is also essential for removing make-up, mixing developers, and many other things. Central heating is, of course, ideal for studio use, but if gas or coal fires are the order of the day a wire guard should always be placed in front to avoid any possibility of accidents.

When a studio is built to design the stage is surrounded by offices, dressing-rooms, scene docks, camera store, and cutting rooms, but it will be a very fortunate amateur who finds such

a place with a rent to suit his pocket. If there is no other space available a small part should be partitioned off where artists can change and rehearse. The smaller the studio the more important tidiness becomes; there should be cupboards for keeping cameras and other apparatus, otherwise expensive equipment will soon get damaged and lost. Never use a damp building; not only is it bad for the health but ruins all materials.

Sound Studios.

So far I have only dealt with studios intended for the making of silent films, but for those who wish to take up "talkies," there are many other points which must be given consideration. A building on a main road is totally unsuited, as heavy traffic will cause vibration as well as unwanted noises. Size, shape and the material used in the building construction all have a bearing on the acoustical properties. Echo must be cut out; this is done by "damping" the walls, doors and windows with thick felt, while a few felt blankets should always be kept handy for local "damping." Light-cables should be fitted as far away as possible, also those connected with the sound, otherwise a "hum" may be set up. Cameras, unless specially made for talkie work, will have to be blimped; this may be done by placing them in a light wooden box, to fit on the top of the tripod, lined with Sorbo rubber.

PATRICK LE ROI.

A Summer School of Cinematography

By
M. A. LOVELL-BURGESS.

IT has fallen to the lot of the Independent Film Makers' Association to stage a Summer School of Cinematography. The date of this Summer School is definitely fixed for the first week-end in August, and it is to be held at Welwyn. People of consequence in the professional cinema world will be among the speakers, and it is earnestly hoped that ciné amateurs will rise superior to their traditional apathy and rally in support. Full particulars can be obtained from the Hon. Secretary, Mr. G. A. Shaw, 32, Shaftesbury Avenue, W.1.

It was in my book, "The Amateur Ciné Movement" (Sampson Low), that I wrote eighteen months ago: "I have hopes of eventually organising a Summer School in connection with the movement, where lectures on acting, pictorial composition, make-up, directing, editing, lighting, etc., would be given by pioneers and leaders, and where all types of amateurs, with varying experience and ambitions, could get together and exchange ideas, to their mutual benefit and to the ultimate enrichment of the movement as a whole."

Ciné amateurs throughout the country will feel grateful to the Independent Film Makers' Association for their lead in this matter. And the I.F.M.A. will appreciate their gratitude if it means co-operation.

What Sort of Summer School?

It is vital at this juncture to think for a moment of what sort of Summer School is needed.

Right from the start we must steer clear of the Conference-Convention complex that finds its sole expression in mild rhetoric.

We need to overcome those minor jealousies, resulting in cliques and factions, that seem to beset every amateur movement. And we shall only do that by dealing progressively at this Summer School with topical problems.

What problems?

In my ideal Summer School subjects for lectures would include editing, special camera angles, lighting—always a fascinating subject!—*tempo*—not yet fully understood by the most intellectual, scenario writing, with emphasis on the

value of common subjects and common elements with all their powerful associations, and, finally, the future of the sub-standard film in the industrial, commercial, educational and religious life of our country. The lectures would be followed by group discussions on the opportunities that such aspects of sub-standard work present to the ordinary ciné amateur, and on the true function of the amateur ciné club as a link between the public and the professional cinema.

It would be interesting to collect a few definitions of cinematography itself, and to trace the existing relationships between it and the older arts of writing, painting, sculpture, etc.

Technicians would be invited to describe their experiences, adaptations and inventions with regard to lighting, make-up and apparatus, with practical equipment demonstrations, and I would have classes for editing, acting, scene construction, scenario writing and camera technique.

That's my idea of a Summer School. What's yours?

July 4th, 1934

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Royal Photographic Society again announces the Pirie MacDonald Award for Portraiture. The award is of twenty guineas for the best portrait of a man. Each competitor may send two prints, which can also be entered at the Annual Exhibition. Prints from this country must be delivered at the Society's House, 35, Russell Square, not later than August 10th; those from abroad not later than July 27th, to allow of clearance through the Customs. Entry forms on application to above address.

The Diamond Jubilee of Messrs. Sands Hunter & Co., Ltd., of 37, Bedford Street, Strand, W.C.2, is now being celebrated. This famous firm was established in 1874 in Cranbourn Street, the premises being vacated for the Leicester Square station of the Piccadilly Railway. At their present address in Bedford Street the amateur photographer will find everything he requires in the way of apparatus, materials and accessories, and an extensive second-hand department. It is notable that the advertisements of this firm appeared in the first issues of "The A.P." in 1884. The reputation they had secured then for fair dealing and business-like methods has continued for half a century. In connection with their Diamond Jubilee they are issuing a Special Sale Catalogue that every reader of "The A.P." should secure. It will be sent free on request to the above address.

An Exhibition of Baby Photographs was opened at the Ilford Galleries, 101, High Holborn, W.C.1, on Friday last by the Rt. Hon. the Lord Mayor of London (Sir Charles Collett), supported by members of the National Baby Week Council. The exhibition, which includes some outstanding examples of pictorial renderings of this difficult subject, remains open during the month. Admission is free.

A Camera Club has been formed at The Walker Technical College, Oakengates, and is to be known as "The Shropshire Camera Club." The meetings for the first session will commence in September and will be held on the last Friday evening of each month. The Hon. Secretary is P. W. Lowe, of 7, Trench Rd., Nr. Wellington, Shropshire.

Extra facilities have been arranged for the British Photographic Fellowship Austro-German tour in September, and there are just a few places left for immediate enquirers. The holiday, which is of fifteen days' duration, begins London on September 2nd, and embraces the most beautiful parts of the Vosges Mountains, the Black Forest and the Austrian Tyrol. The inclusive cost, which covers luxury coach travel throughout, hotels and all excursions, is £16 15s. Enquiries should be addressed

to Mr. S. W. Kenyon, 7, Aberdeen Mansions, Kenton Street, London, W.C.1, who is the B.P.F. President, and who is personally attending to every detail of the tour. The mid-July German tour, and for which all places have been booked, is on a much smaller scale than the September trip, and the party will consist mostly of ciné workers. They will fly to Frankfurt, from whence they will travel by three specially commissioned Ford V-8 saloons. This is the first time on record that a photographic society has used an aeroplane for general travel purposes.

At the June meeting of the Council of the Royal Photographic Society the Fellowship was conferred upon James M'Kissack of Glasgow in recognition of his contributions to pictorial photography over a period of many years. At the same meeting, S. J. Beckett, of Bournemouth, was readmitted to the Fellowship of the Society.

To increase the rapidity of film changing by Leica enthusiasts a quick winding contrivance for that popular little camera has been put on the market. It is not made by Leitz but is obtainable from them. The arrangement is fitted on to the axis of the present winding-knob after the removal of this, and is essentially of a similar construction to a spring tape measure, with a ring at the end which slips over the finger. In use, a little steel cable is pulled out, which winds the shutter and simultaneously changes the film. The steel cable slips back and can be pulled out again immediately after the shutter has been released. With this gadget, the Press photographer can take at least two exposures in one second, in fact, he can use up the entire 36-exposure film in 18 seconds or less, and, should the occasion demand it, make almost a ciné record of any event. The price of the attachment, including fitting, is 30s.

The Southport Photographic Society has a new hon. secretary, Dr. J. H. Moorhouse, 23, Queens Rd., Southport, who informs us that the society is in a flourishing condition, having over a hundred members. In the last three years they have won the Tansley Shield (L. & C.P. Union) twice, and have held very successful exhibitions in the Art Gallery. About twenty-four meetings are held in the winter session, Mondays, 8 p.m.; new members will be welcomed, particularly beginners. Further particulars on application to above address.

We regret to have to record the death of H. A. Crawford, a former president of the Leeds Photographic Society and a well-known pictorial worker and exhibitor. Mr. Crawford was a solicitor, a connoisseur in art matters, and a member of the Leeds Art Gallery Sub-Committee.

EXHIBITIONS and COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, July 31. Rules in the issue of June 27th. Southern Counties Salon (Organised by Camberwell Camera Club).—Open, June 30-July 8. Salon Secretary, 69, Denmark Hill, S.E.5.

Lucerne International Salon.—July 7-29. Secretary, International Salon of Photography, Lucerne. Derby P.S. Jubilee Exhibition.—July 21-August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15. Applications for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers, please copy.)

"All Britain" Photographic Exhibition (Organised by Scarborough Amateur Photographic Club).—Entries, July 28. Open, August 31-September 15. Further particulars from Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20-25. Entries close the last mail in July. Particulars and entry forms can be obtained from the Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Entries, August 1; open, August 24-September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Entries, August 24; open, September 24-30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan.—Last day for receiving prints in Tokyo, August 31. Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6; sending in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6; sending in day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 20-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Further particulars from Salon Committee, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Ill., U.S.A.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26-September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowderska 8, Poland.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935. Entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr. 69, Antwerp, Belgium.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Stained Prints.

I send some prints showing stains. Can you explain the cause, and why some of the prints in the same batch were stained and not others?
W. S. R. (Accrington.)

The most likely cause of the stains on your prints is insufficient rinsing between developing and fixing. This would account for their appearing on some prints and not on others, as some of the prints might have been just sufficiently rinsed to avoid the stains.

Type of Camera.

It is a drawback to have to use a whole roll of film before developing. Is there a camera which admits of ground-glass focussing, and instead of an eight-exposure roll of film has a separate piece which can be removed one by one?
C. H. S. (Ilford.)

In the very nature of things you cannot deal separately with the different sections of a roll film. There are many cameras made, however, which will take plates in single or double slides, or alternatively, a film pack. In the latter case, however, although it can be done, it is not altogether desirable to remove exposed films from the pack until they have all been used. On the whole, we can see no satisfactory method but the use of plates to secure the conveniences you desire, although you can use cut films instead of plates in the slides.

Uneven Illumination.

My vertical enlarger is fitted with a single lamp and a diffuser. I can enlarge from 2½-in. square negatives, but when I use 4½×2½ negatives there is under-exposure at the edges. How can I get over this?
E. L. (London.)

The smaller the negative the easier it is to illuminate it evenly with a single lamp and a diffuser. When you come to a larger negative, however, you will meet with the trouble which you have now encountered, and there is no really satisfactory way of overcoming it, except by using a condenser.

Glossy Prints.

How can I dry enlargements so that they are flat and glossy enough for reproduction? I have used glossy paper, but the prints have a moderate gloss when dry, and are cockled.
L. A. W. (Eastbourne.)

Judging from your letter, you are unfamiliar with the very well-known method of glazing prints by squeegeeing them down while wet on to glass, ferrotype, or other suitable material for the purpose. This method will give you a flat print with a highly glossy surface.

Uneven Print.

What is the cause of the cloudy markings on the enclosed bromide print? The cloudy patches develop slowly, and while waiting for them to disappear the rest seems to get over-developed.
R. H. J. (Cullompton.)

The patchy appearance of your print is due to uneven development. You must get the whole surface covered with developer at once, and keep the solution moving by rocking the dish in both directions. A properly exposed bromide print should take about two minutes to develop fully, and you should have no trouble in getting the action even over the whole surface.

Buying Emulsion.

I have asked a well-known firm to sell me a small quantity of their emulsion, but they say it is a secret material. Can you give me a formula for making emulsion, or tell me where I can buy a small quantity ready-made? B. V. Y. (Southgate.)

You cannot buy emulsion for coating films and plates. The preparation of such sensitive material is a highly skilled and technical matter. It may give you some idea of what is involved if we tell you that the standard book on photographic emulsions is a large volume costing 25s. net. Enthusiastic amateurs have certainly prepared their own emulsions, and coated plates, but there is no advantage in so doing either as regards quality or cost.

Repairing Bellows.

The leather covering is peeling off from the bellows of my camera. What can I do to re-cover them?
C. W. (Clitheroe.)

The re-covering of bellows is not a task that can be undertaken satisfactorily by the inexperienced. We should advise you to have the work done by a professional repairer, who would, however, probably recommend the fitting of new bellows as more satisfactory, and probably less expensive.

Testing Shutter Speeds.

How can I check the exposure time of a shutter? If I set the shutter to 1/50th of a second, how can I prove that it is open for that time?
E. H. M. (Stourbridge.)

Several methods have been suggested in *The Amateur Photographer* from time to time for testing shutter speeds. The simplest is by photographing a revolving disc, such as a gramophone turntable placed vertically, or the revolving wheel of an inverted bicycle. If a small patch of white paper or a bright silver bead is attached to the edge of the revolving disc or wheel, and the revolutions of the wheel are ascertained at one or two or more per second, it is quite easy by photographing it in a bright light to calculate any shutter exposure by noting in the negative how far the white spot has moved during the exposure. It resolves itself into an ordinary proportion sum. Most of the shutter testing methods are based on a similar plan.

Focal Length and Stops.

If I alter the focus of a lens by means of a supplementary lens will this alter the time of exposure?
O. U. (Arendal.)

When you alter the focus of your lens you alter the value of the stops, and necessarily this affects the time of exposure. The value of the stop alters in proportion to the alteration of focus, so that once you know the original and new focal lengths, you can work out by simple proportion the value of the original and new f/ numbers.

Secret Medium.

A friend has shown me how to colour bromide prints with pencils, but he has a secret medium for making the colours run afterwards. Can you enlighten me as to this medium?
L. C. (Camberley.)

We cannot venture to pass any opinion upon the medium described. There are certain coloured pencils with which the medium used for making the colours run is plain water. Perhaps this is your friend's "secret," as you say he may be merely "pulling your leg."

Fixing in Tank.

Some makers of tanks do not approve of using them for fixing as well as developing. As I use a hypo eliminator, would it be safe to conduct the entire operation in the tank?
H. H. N. (Fenham.)

Provided stringent precautions are taken as to cleanliness there is no definite reason why you should not fix in the developing tank. The reason it is discouraged is that so few people realise the necessity for avoiding any hypo contamination during future development, and their cleansing of the tank is too perfunctory.

Old in Experience—New in Design

THE London Salon of Photography 1934.

SENDING-IN DAY, Wednesday, August 29th.

THE TWENTY-FIFTH EXHIBITION promoted by the Members of the London Salon of Photography will be held at The Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1, from SATURDAY, 8th September, to 6th October, 1934.

CONDITIONS OF ENTRY (Please read carefully).

No. 1. Pictures from exhibitors in the British Isles must not be framed; but may be mounted. Each picture must bear on the back, clearly written—(a) name of artist; (b) number and title of picture; corresponding to particulars on the Entry Form.

No. 2. When mounts are employed, they should conform to the following sizes—25 × 20, 20 × 16, or 15 × 12, but no mount to exceed 25 × 20; and it is suggested that white or light-toned mounts be employed wherever possible.

No. 3. Pictures from abroad must not be mounted (or framed), but should bear full particulars as above.

No. 4. Pictures which are sent unmounted will be suitably mounted by the Salon Committee, and all accepted pictures will be shown under glass.

No. 5. All pictures should be sent by parcels post, packed flat, and properly protected with stiff cardboard and adequate wrappings, addressed to: THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY, 5A, PALL MALL EAST, LONDON, S.W.1.

No. 6. The sending-in day is Wednesday, August 29th, 1934. All pictures for the Exhibition must arrive at the above address on or before this date. Exhibits may be delivered by hand at the Gallery on this date only.

No. 7. The Entry Form, properly filled in, must be sent with the pictures, together with entry and packing fee of 5/- (this fee covers any number of pictures from one exhibitor).

No. 8. To avoid Customs complications, all entries from without the United Kingdom must be sent by post and without prices marked on the prints. Packages containing such entries should be clearly labelled: "PHOTOGRAPHS FOR EXHIBITION ONLY. NO COMMERCIAL VALUE. TO BE RETURNED TO SENDER."

No. 9. All pictures sent by post will be repacked and returned carriage paid, after the close of the Exhibition.

No. 10. In view of application being made from time to time to The London Salon of Photography for permission to reproduce pictures from the walls of the Gallery, exhibitors are asked kindly to signify on the Entry Form whether they have objection to such permission being given. The copyright, in all cases, remains the property of the authors of the prints.

No. 11. The Committee assure intending exhibitors that the utmost possible care will be taken of all work submitted, but they do not accept any responsibility for loss or damage, either during transit or at the Gallery.

The submission of pictures will be understood to imply acceptance of the above conditions.

Due notification of acceptance of pictures will be sent out as soon as possible.

All work submitted to the Selection Committee will be carefully and impartially considered, and no preference will be given to pictures by Members of the Salon.

All correspondence must be addressed to the Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amapho, Watco, London." Telephone: HOP 3833 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less.....1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less.....2/6
 2d. for every additional word.

Each paragraph is charged separately.
SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 8; 26a, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

Notes being untraceable if lost in transit should not be sent as remittances.

& Co.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

ENSIGN, LIMITED

High Holborn, London, W.C.1

Optochrom Yellow Glass Filters

for Orthochromatic material.

Green Glass Filters

for Panchromatic material.

Optochrom Green Glass Filters are recom-
mended for use with Panchromatic Plates or
Films, the increase of exposure necessary
being only four times the exposure without
a filter. Optochrom Yellow Glass Filters are
supplied in four different densities: No. 0
Extra Light, No. 1 Light, No. 2 Medium,
No. 3 Deep. The deeper the tint of the glass
the longer the exposure must be. For a land-
scape view, therefore, the Extra Light or
perhaps the Light filter should be used; for
dark-coloured objects the Medium or Deep
filter should be used.

Prices of Optochrom Filters in
Optochrom adjustable holders:

| To fit lens inches diam. | Yellow Price. | Green Price. |
|-----------------------------|------------------|-----------------|
| 13/16ths | 8/6 | 11/6 |
| 15/16ths | 10/- | 12/6 |
| 1-1/16th | 10/- | 12/6 |
| 1-5/16ths | 11/6 | 15/- |
| 1 1/2 | 12/6 | 17/6 |
| 1-11/16ths | 15/- | 22/6 |
| 1-13/16ths | 18/- | 28/6 |

High Praise For — The NEW NORFOLK

**THIS
CUSTOMER SAYS:—**

"I must tell you how delighted I am with
the instrument, and think the value is really
astounding. I did not send for this camera
until after trying and seeing other makes and
persuading various lists, etc., when your advert.
came out on Wednesday in 'The A.P.' I decided
to send for one, and can assure
you I am not disappointed."
R. D. H. (Yorks.)

From an actual photograph. Manufactured specially for the
Sheffield Photo Co., Ltd., by Gebrüder Wirgin, Weisbaden.

3½ × 2½ Plate & Film Pack Camera
F/3.5 ZERANAR Anastigmat Lens (¼-in. focus),
COMPUR delayed-action SHUTTER.

This is a precision instrument constructed of a light alloy,
strong, but of very superior finish. Rising and cross front
both actuated by micrometer movements. Clear and direc-
tion view-finders.

The Zeranar lens gives very critical definition and is equal
to most lenses at double the price. Price **£6:15:0**

(Nine equal payments of 15/9), including 3 Slides. Film
Pack Adapter 6/9. Extra Slides 1/9. Best Leather Case 15/-.

"FLIGHT" is the recognised leading authority on aviation. Sections are devoted to:

Private Flying, Work of the Clubs and Schools, Commercial Aviation, Airlines and Airports, Royal Air Force news, The Work of R.A.F. squadrons.

A special staff of highly competent aerial photographers ensures that "Flight" contains the finest photographs of aviation in all its aspects.

Illustrated descriptions of new aircraft, aero engines and equipment, British and Foreign, appear regularly, as well as helpful articles giving the latest information for Club members and amateur pilots.

"Flight" is the official organ of the Royal Aero Club of the United Kingdom.

Leica

Every model, lens and accessory in stock

Come to Bond Street for everything you need—no delay in getting your wishes fulfilled—our stock is the most comprehensive in the country.

NEW "FOCOMAT" FULLY-AUTOMATIC ENLARGER

With automatic focussing adjustment giving from 2 to 10 diameters. Ask to see this latest Leica apparatus at Bond Street. With 75-watt lamp. **£13:19:0**

LEICA MODEL III With F 2 SUMMAR LENS

With automatic focussing, changing lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement.

£33 : 13 : 0

Nine monthly payments of 78/6.

LEICA LENSES and ACCESSORIES

Our stock includes HEKTOR and ELMAR Lenses of all grades. Let us quote you for the one which best suits your class of photography. We also have angular view-finders, ever-ready cases, Leica enlarging apparatus, and can also supply the Leica camera in chromium finish at 24s. above the price of the ordinary model.

HEKTOR f/4.5, 3.5 cm. Possesses great defining power. Particularly for use to distinguish extremely fine detail. Chromium finished

£16 : 12 : 0

ELMAR f/6.3, 10.5 cm. (as illustrated). Long-focus lens for landscape photography. Excellent for touring and mountaineering. Chromium finished **£9:4:0**

ELMAR f/4, 9 cm. High-speed long-focus lens, specially suited for landscapes, architecture, animal studies and portraits **£10 : 14 : 0**

ANY LENS ON EASY TERMS.

A Rolleiflex Picture

Just study this picture—the admirable composition—the sharpness of focus—the wealth of detail—and think for a moment what a *fraction* of a second the fox cub was in that "just right" position—however skilful the photographer, no ordinary camera could have caught such a successful picture. ASK YOUR DEALER to demonstrate the unique and superb qualities of the Rolleiflex.

In every way the finest Roll Film
for the "serious" worker . . .

"PANATOMIC" FILM

The name describes it—a *panchromatic* film of almost *atomic*-fine grain. It is double-coated—for detail in highlights and shadows—and is anti-halation backed.

The negatives prove it—they are crisply detailed and full of that rich luminous quality that you need for your finest pictorial work.

"PANATOMIC" FILM

IS A KODAK PRODUCT

Ask your
Kodak dealer

WE THOUGHT WE'D SAID EVERYTHING

*Multi - Coated
Colour - Sensitive
Anti-Halation Backed*

which could be said about the Selochrome Film Pack when we gave the five following items as its outstanding features:

1 Films are kept absolutely flat and remain so when removed.

2 The pack is absolutely light-tight. There is no fear of fogging—not even at the edges.

3 The tabs of the pack are of varying length. It is almost impossible to pull the wrong tab.

4 Each film is brought into position with an ease and accuracy never before attained.

5 One or more films may be removed without opening the pack or removing it from the adapter.

But —AS A SATISFIED USER POINTED OUT there is a sixth advantage with the Selochrome Film Pack, namely, that it fits into correct register with any film pack adapter—even those with rounded corners

SELOCHROME FILM PACK

Obtainable from photographic dealers in the following sizes
2 3/8" x 1 1/4", 3 1/4" x 2 1/4", 4 1/4" x 3 1/4" and 9 x 12 c/m.

WEDNESDAY, JULY 11TH, 1934.

Copyright—Registered as a Newspaper
for transmission in the U.K.

Vol. LXXVIII. No. 2383.

NEXT week's issue of *The Amateur Photographer*—published on Wednesday, July 18th, will be the Summer Number. As in past years, this special number will be considerably enlarged. In addition to extra pages of articles and illustrations dealing with the popular aspects of summer and holiday photography for every class of amateur photographer, additional art pages will be included, and there will be an attractive "all-over" three-colour cover. Since on previous occasions the special numbers have "sold out" on publication, our readers both new and old are urged to place an order at once for next week's issue, or they may be disappointed by not obtaining a copy. The Summer Number will be published at the usual price of three-pence.

Sweet are the Uses.

It says much for the enterprise of a photographic dealer that the first use in commercial advertisement of the new slogan "Use less water" should have a photographic application. Many concerns—such as, obviously, the brewers—might have made out of it a cleverly turned "ad.," but it is a photographic dealer who gets in first. "Use less water," says his advertisement, "let us develop your films." Very good, if a little far-fetched. Incidentally, we have always had occasion to admire the resource of the advertisement draughtsman so far as photography is concerned. No one has done more to popularise the camera than some anonymous persons with the pen and pencil.

All Sorts of Seaside.

A big push is being made at present for popularising British seaside

TOPICS of the Week

SUNSHINE IN TRAFALGAR SQUARE.

An article on "Against-the-Light Photography" appears on another page in this issue.

resorts, and a new body called the British Health Resorts Association has been doing commendable work by holding conferences at various watering-places at which attention is drawn to their respective merits. A correspondent who attended one such conference last week at Cromer brought back, however, a somewhat confused impression, and as photographers are among the people most interested in meteorological phenomena, perhaps their acute minds can sort it out. It is a case of rivalry between our different coasts. On figures the south coast is sunnier than the east, but it was suggested at Cromer that the superiority of the south in this respect anyhow is trifling, and is probably to be attributed to an error in the taking of the sunshine records. On the other hand, the east coast beats the west, and there the advantage is indisputable, and not to be explained away by wrong arithmetic. Similarly with the wind. A very subtle argument was propounded by a meteorologist in favour of the east coast. It is all a myth, it appears, this association of east coast and east wind. In fact, the east wind is often much less malevolent when it first touches our eastern shores than when it gives a parting sting to our western, especially if there be snow over the intervening country, making the wind more vicious as it travels west. But it is the west wind which is the prevailing wind in this country, and violent as it is when it reaches the west coast, its friction is lessened, its temper softened by the time it gets across to the east, so that in Norfolk and Lincolnshire it is a balmy breeze. Happy Cromer, which has it both ways! One thing we ourselves did notice journeying to East Anglia, that although the

prevailing wind there as elsewhere is westerly, the trees have a permanent inclination away from the coast.

Bless the Weather.

That recent conference at Cromer (our correspondent continues) was attended mostly by doctors who had much to say about the advantages of the east coast for almost every complaint. But, after all, the seaside resorts do not want to be crowded out with invalids, and even in Cromer, as everywhere else, the death-rate is one per person. It was a relief after a succession of speeches showing the east coast to be good for everything, from tennis elbow to housemaid's knee, to hear someone get up and acclaim it for another reason—for its changing light, the richness and beauty of its clouds. The weather we grumble at is really the sculptor who has fashioned us into what we are. The climate on the shores of the North

Sea is said to be the best in the world for human activity. As Walter Savage Landor said, we are what the sun, the wind and the waters make us. By the way, the slogan of Cromer, or rather of that arc of coast which has Cromer in its centre, is that there the sun rises and sets in the sea. Can that be said of any other place in England?

Three at Once.

We were in a group the other day which was photographed by a professional who had three cameras in action. What is more, he exposed them all simultaneously, and with one hand, using the other hand to compel attention. The cameras were side by side, and he simply gathered the three bulbs into one hand and pressed them. No wonder when the eventual prints were handed round that the look on the faces of the group was similar to the expression with which one watches a conjuror.

Back to the Primitive.

We listened the other day to the presidential address from the chair of the Institute of Patent Agents. It was a great eulogy of the inventor, especially the inventor of the last thirty years, and not least in the photographic field, where the cinematograph has created a great new industry. The speaker mentioned the great work that had been done in connection with the telegraph and the telephone, with the hundred applications of electricity, with road and air transport, with radio here and television on the way. He made our fathers appear to have been living almost in a state of primeval savagery. And then he ended up by confessing that his address had been written in a country cottage by the light of an oil lamp, a cottage which knew not gas, nor electricity, nor tap water, nor wireless, and in a village without a cinema, and away from the routes of the motor-bus.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Achromatic Lenses.

Can you give me an idea in non-technical language of the particular defect that must be removed to make a lens "achromatic" so that it can be used for photographic purposes? Why cannot lenses without this correction be used in photography?
C. L. S. (Leamington.)

It is well known that when a beam of white light passes through a glass prism the constituent colour rays are refracted, i.e., bent out of their course, to different degrees. Hence the familiar phenomenon of the spectrum. A single lens of one kind of glass only, such as that suggested in the diagram, acts in a similar manner.

It must be understood that the diagram is much exaggerated in scale, and that to simplify matters it deals only with two groups of colour rays—the violet and the yellow. The violet

see on the screen a sharp yellow dot surrounded by a ring of violet.

The eye is very sensitive to the yellow rays, and it is these which would most guide us in getting a sharply focussed image on the ground glass; but a photographic plate is most sensitive to the violet rays. The two planes, A A and B B, represent what are called the chemical and the visual focus respectively.

Different kinds of glass have different refractive indexes; that is, they do not behave alike in the extent to which they bend rays of different colours. It is therefore possible to combine lenses in such a manner that all rays are brought to a focus on the same plane. The extent to which this is accomplished varies, but a lens in which the correction was perfect and complete would be truly achromatic, or entirely free from chromatic aberration. This ideal can be attained only with difficulty, but is most necessary in lenses to be used, for example, in three-colour process work.

When some compromise is necessary it is arranged that the focal plane shall be adjusted for the violet rays, as the yellow and red rays play a much less active part, in the ordinary way, in forming the photographic image.

It is hardly correct to say that lenses with a certain amount of chromatic aberration cannot be used at all for photographic purposes. Such lenses are still frequently used, for example in cheap fixed-focus cameras and enlargers. But the focal plane has been adjusted to the chemical and not the visual focus. Some years ago a popular casket set consisted entirely of "uncorrected," or "spectacle" lenses. In such cases visual focussing is done with the aid of a supplementary correcting lens, or a suitable filter, this being removed before making the exposure.

The introduction of new forms of glass for optical purposes has greatly facilitated the elimination of chromatic and other aberrations in lenses intended for photographic purposes.

rays being most refracted come to a focus at the plane marked A A; beyond that they disperse. The yellow rays come to a focus at the plane B B. If this plane were a sheet of ground glass, and only the two colours named were present, we should

What is a GOOD PHOTOGRAPH?

In the following article the points upon which a good photograph excels one of indifferent quality are dealt with, as well as the methods by which proficiency in production is acquired.

MORE cameras are in use today than at any period in the history of photography, and more photographs are produced. But in spite of marvelously efficient apparatus and materials of perfect quality there are, unfortunately, thousands of amateurs who are content with indifferent results.

This may be due in a majority of cases to the fact that the amateur has not mastered the rudiments of photography; he is apt to rely on what the D. and P. establishments give him as the best that can be secured from his exposures. We can only emphasise what has already been put forward in these pages, that the right way to obtain the best results from every exposure is to learn how to develop and print one's own negatives and make the most of every photograph that is taken.

Knowing How.

Many camera-users are now having the advantages of doing their own work throughout pointed out to them by dealers who are realising that by depriving their customers of a knowledge of photography (by D. and P. methods) they are eventually depriving themselves of customers.

It may assist many readers, therefore, to indicate some of the points that arise in making a good photograph, apart from the technical side of development, which has already been dealt with in these pages on several occasions recently and will be dealt with again.

The worker who wisely decides that in future he will undertake his own developing and printing will find that, as his control of these processes increases, the knowledge he acquires will inevitably create an appreciation of the niceties of correct exposure, focussing, and other matters—all of which go to the making of good photographs.

Good Negatives.

The good negative is one in which detail is suggested by a deposit of silver in the deepest of shadows, while the highest lights are not too opaque for the printing process to register. The degree of density will vary according to the needs of the printing process employed, but the basis of a perfect negative is full exposure and correct development.

All modern plates and films have a good margin of latitude in exposure. This is a very valuable quality, and it should be employed to retain the full contrast scale of a difficult subject. Latitude does not, however, allow of a good negative resulting from gross under-exposure, but it does mean that when a subject is such that some local over-exposure is imperative, the lights will not be sacrificed.

Latitude such as this is a very important consideration in the case of negatives, made with small cameras, which are to be enlarged to many times the original size.

Pictorial and Technical.

The photograph will be judged from the point of view for which it is made. If it is a pictorial photograph the standards with regard to the definition will vary. In the case of a landscape subject, selective focussing, by which one part of the subject is emphasised and therefore stands out from the surroundings, makes it distinct from the subordinate detail.

On the other hand, if the photograph is required for Press work, and for the purposes of record, critical definition over the whole subject is required. These subjects are often rendered much harsher with regard to contrast. Thus it will be seen that what may be a merit in one case may suggest bad craftsmanship in another. The secret of success lies in the way in which the photographer understands

and controls his medium in order to secure the result desired.

Quite apart from these things, however, there is much to be gained from investigating other factors that assist in making a good photograph.

Materials.

Perhaps the most appreciable of these factors is that which concerns the choice of materials. There are suitable materials for practically every branch of photography, and good pictures can seldom be secured unless these are used. It would be impossible, for example—or extremely difficult—to secure a good negative of a cloud-capped landscape on a slow "process" plate; it would be impossible, too, to avoid losing several of the tones which characterise a finely-scaled panchromatic negative when printing is being done upon a hard grade of gaslight paper.

The fact that a picture is successful automatically implies no little degree of technical excellence, and this must be regarded as proof that suitable materials and a knowledge of how to use them are common to all such pictures. But it is possible to obtain different grades (i.e., qualities) of even suitable materials; and then it is possible to lower the standard of results by the application of careless or haphazard treatment.

With regard to the first of these possibilities, it may well be emphasised that the safest plan is always to purchase the best one can afford. This is not to infer that the best is of necessity the most expensive—but it does mean that stale materials and the manufacturers' "seconds" are not sufficiently reliable to employ in good photography.

Thus it may be held that careful technique is another important factor in good photography. And by careful technique we must understand precise technique—technique based upon personal observation rather than upon rule-of-thumb commercial mass-production methods.

Against-the-Light Photography

By PETER W. HILL.

THE fact that the recent Kodak "World Competition" was won by a photograph taken against the light illustrates what an attraction such pictures have. In a blasé world they still have the value of novelty, and it is astonishing how striking a commonplace subject may become when photographed against the light.

With sunlight behind the subject, and with the selection of the correct viewpoint, many irritating little details will become obscured, while the prominence of the main item in the picture will be strengthened.

For a photograph of this type to be effective three points must be remembered. The first is to double the exposure; the second is to shade the lens from the direct rays of the sun; the third is to use backed plates or one of the modern anti-halation films, to prevent any exaggerated halo effect appearing round the high-lights of the photograph.

Of these three points the second is by far the most important, for if any direct rays from the sun shine into the lens it will cause a veil of fog to appear on the negative, which will take all brightness and crispness from the picture.

A hood specially made for the purpose is the best means of shading the

Taken from inside a room.

A lens-hood is necessary for this kind of against-the-light snapshot.

Taken through a doorway, which acts as lens-hood.

lens, and every keen camera user is advised to include one in his equipment. They are obtainable from most dealers, in a variety of patterns, and to fit all types and sizes of lenses. The lens-hood should be as deep as possible, but not so deep that it cuts off any of the picture.

If a lens-hood is not available when wanted there are many possible makeshifts. For example, the photograph can be taken in the shade of a doorway, a tree, or the interior of a car (with the windows down); or the lens can be shaded with a piece of dark card, a hat, or the dark slide of a plate-holder—anything as long as it will not reflect light into the lens, but keeps the front of the camera shaded. When photographing direct into the sun—as in the case of a sunset—the lens-hood is of course inoperative.

As regards development, it is advisable to shorten the time by about one-fifth of the normal, since most against-the-light subjects have strong contrasts, the high-lights of which are liable to become blocked up if development is continued too long. Of course, when developing roll film containing several different types of subjects it is best to develop for the normal time and rely on the different grades of printing papers to suit negatives of different contrasts.

A pocketable focal-plane camera at a very low price

ENSIGN AUTOSPEED

One movement sets the shutter and changes the film. High speed shots are therefore made in quick succession. The focal-plane shutter has Time and 8 instantaneous speeds (1/15 to 1/500th second). Owing to its rapid manipulation, high speed shutter and large aperture lens the Auto-speed is the ideal camera for "speed" pictures.

SANDS HUNTER & Co., LTD.

37, BEDFORD STREET, STRAND, LONDON, W.C.2

SUCCESSFUL roll-film negatives of high technical excellence owe this quality to the general efficiency of the photographic equipment employed when making the exposures, and to careful treatment in the subsequent operations.

Efficiency of equipment, however, can be enjoyed only when the material and apparatus concerned are properly handled and cared for—so that most of the troubles occasionally experienced may be regarded as quite avoidable mishaps.

Such troubles are in the main occasioned by allowing dust or grit to accumulate within the camera, by winding with the bellows closed, by mishandling the film when loosely spooled, and by overlooking small imperfections which may have developed within the camera itself.

Avoiding Blemishes.

Obviously, the best way to prevent the accumulation of dust is to use a cleaning brush (a small camel-hair paint-brush is excellent for the purpose) at frequent intervals, and to keep the instrument protected within its case when not in use. Even with miniature cameras, dust accumulation is only a matter of time; though the task of cleaning may to some extent be governed by the amount of film passed through the camera.

When working in the country or at the seaside, sandy grit is liable to enter the camera with the introduction of a new spool of film, and special precautions are in such cases necessary to ensure that both camera and spools are free from adhering particles at the time of changing over.

"Tramlines," or lateral scratches,

HINTS and TIPS for Roll-film Users

By "COMPUR."

affecting whole lengths of the film may be caused by tightening a loosely-wound spool after removal from the camera, or they may be occasioned by winding from one exposure to the next with the camera bellows closed.

Loose spooling is not a matter of frequent occurrence, but it may be experienced when exposed films are taken from the camera and the adhesive tab is not stuck firmly into position at once. Winding the film with the bellows closed may easily become a habit—until it is recognised as the primary cause of these scratches, after which the practice is hardly ever likely to be repeated.

Films that happen to be taken loosely wound from the camera and not stuck down should be placed into a dark box or other receptacle immediately on removal. If exposed to the light they are extremely liable to become fogged at the edges. It must also be realised that jolting occasioned when a loosely-wound film is carried about in the pocket may set up local abrasions on the emulsion surface.

Other forms of abrasion may be caused by contact with friction surfaces within the camera, whilst local fogging

may also result from pinholes in the bellows or light leakage from other parts of the camera.

After-Development Hints.

Efficient film tanks have done away with much of the trouble formerly experienced in the home development of roll films. Risk of injury is still prevalent, however, in the after-development stage.

Washing, for instance, is an operation which must be conducted with the greatest possible care, since the delicate emulsion is in a very soft state and is extremely susceptible to finger-prints, nail scratches and the like.

Immersion in water at varying temperatures and prolonged washing are alike prone to result in frilling and blistering—though the use of a preliminary hardening bath is of some assistance in preventing the occurrence of these troubles. Rubber gloves, too, are most inexpensive and form a ready means of preventing chance blemishes.

Drying should be conducted in a dry, dustproof place away from the workroom and deleterious fumes. During the summer months, drying is apt to be too quickly accomplished; and this, in the case of films which have been allowed to soak for a long period, is prone to result in twisting and cockling.

Rapid drying is also responsible for "tear-drop" markings on the films. Since these are most objectionable and are difficult to remove, it is advisable to sponge all surplus water from the film surfaces before commencing to dry. This is best done with the aid of a chamois pad saturated in water and wrung out immediately before commencing the swabbing.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Unposed

By
L. A. PATERSON.

be baulked at the last moment. This is where the small camera

The Punch and Judy Show.—A Critical Front Row.

EXTREMELY pleasing results and much enjoyment can be obtained by photographing children who are quite unconscious of the camera's presence. When photographed in this fashion, they exhibit a variety of intriguing expressions and moods, and play happily absorbed in their games, quite oblivious of the amateur photographer who is wisely seizing his opportunity.

Very fine poses, essentially natural, are caught in this manner, and the results are delightfully sincere. Such pictures will charm both parent and photographer; but the photographer must be alert and quick.

Most youngsters are seldom still. No sooner does one thought strike them than they are immediately the victims of another still more fascinating one, which has to be put into action the same split second. Before the poor frustrated man with the camera has even an opportunity to focus a particularly brilliant pose, young lightning is off out of range, pursuing some other will-o'-the-wisp.

Photographing children while they are playing is the finest test of patience and good temper that I know, but given only a normal share of these desirable virtues, one can see the funny side through the frustration, and enjoy the fun. I have spent hours watching kiddies, with my hidden camera, ready at a moment's notice for any good picture that presented itself, only to

The Foreman.

A Picture of Sympathy.

scores over the large, bulky one, for it does not so easily draw the attention, and very often escapes notice altogether.

Sometimes kiddies have to be posed, and then it is better to get them interested in something such as a toy, and the right opportunity will soon present itself. For telling a young child to do this or that usually produces a self-conscious smirk, or a strained attitude, and then the utmost skill is required in order to produce a likeness which does not show camera consciousness.

Focussing is extremely critical when working close up with a large-aperture lens having little depth of

July 11th, 1934

CHILD STUDIES

focus, and it will occupy most of one's attention while following children in action. The background also will be constantly changing, and it is important to watch this closely, as an unsuitable one will definitely spoil an otherwise splendid picture.

Lastly, the lighting has to be considered. Blinding sunlight will give a disastrous expression to the most angelic face, but if there is plenty of reflected light abounding,

Feeding the Swans.

extremely pictorial results may be made against the sun. This method will light up the curls and hair most prettily from behind, while the face will be softly lighted by that which is reflected. Side lighting is very useful, also, as it throws up a child's chubby modelling, and makes its charming plumpness apparent.

The parks and seashores are fruitful sources of unsuspecting material. Many a happy picture can be poached around the model yachting ponds or on the sands, where the kiddies are in the seventh heaven of delight. Should a fond mother be

The Yacht Club.

anxiously watching her child's welfare, the promise of a print will gladden her heart, and make you a friend for life. But, just a word of advice. Don't become too engrossed in the children's play and forget that your primary object is photography.

As to the form in which the results are to be presented, it is evident, in the first place, that the pictures must

be enlarged, especially when a miniature camera has been used. Inasmuch as sunlight is more often a feature than not in this type of subject, a warm-tone print on a cream base generally fills the bill, and chloro-bromide should be kept in mind. After all, nothing does such complete justice to these subjects as the lantern slide, and few other subjects give such pleasure to the average audience. Happy children are deservedly popular. But unfortunately the lantern slide has its limitations, and prints are better.

A Contrast in Fashions.

Competitions and the Camera

By WM. C. WATERMAN.

THE photographic competition season is now in full swing. Newspapers and other periodicals, the manufacturers of photographic requisites, various seaside resorts, and advertisers of household commodities are amongst the organisations which offer valuable prizes for open competition. The field is a very wide one, catering for all workers from the serious amateur to the casual holiday snapshotter.

Before entering for any competition a careful study should be made of the type of photograph specified, and the

Tenderfeet.

Getting acquainted.

conditions governing entry. The type of picture required is often summed up in the title, e.g., "Happiness," "The Holiday Spirit," "Beauty Snaps," "News Snaps," etc.

The title "Holiday Snaps" provides a very wide scope and includes practically all the above subjects, but does not imply that any snapshot taken on holiday would appeal to a competition judge. A holiday photograph should convey the holiday spirit in an attractive manner. Any picture depicting holiday-makers enjoying their vacation would be certain to receive careful consideration.

The rules governing the competition must be rigidly observed. These may specify the size of the print, and whether it must be mounted, whether exclusive entries which have not been submitted elsewhere are desired; requirements as to coupons or entry forms, and sometimes entries which have been previously published are

barred. The last point is of great importance, and has caused, in a recent case, the disqualification of a print which had been announced as the winner of a substantial first prize.

It is, therefore, a mistake to enter duplicate prints of an exceptional subject for more than one competition, for if a small prize be awarded in one competition the publication of the print may automatically disqualify it from being considered elsewhere.

A study of the published winners during the run of a competition will indicate the right quarter to which to submit a likely print. To avoid complications it is advisable to make several exposures on a subject with outstanding appeal, varying the viewpoint or arrangement with each. There can then be no objection to entering prints, similar in idea, but differing in minor details, in several competitions.

Curiosity.

ONE. PRESS BUTTON — CAMERA OPENS

IKONTA No. 520

FOR 16 PICTURES ON THE USUAL $3\frac{1}{4} \times 2\frac{1}{4}$ IN. FILM.
EACH PICTURE $2\frac{1}{4} \times 1\frac{1}{4}$ IN.

Think of it! The Ikonta No. 520 takes sixteen pin-sharp negatives at the expenditure of no more than 1/- for ordinary speed film, or 1/2 for ultra-fast emulsion such as the Zeiss Ikon Pernox.

The Ikonta is the aristocrat of self-opening roll-film cameras, modern but pleasing and handsome in shape, and ready for use in an instant.

All Ikontas and Nettars are safe for use with panchromatic film. Beautifully printed lists describing Zeiss Ikon cameras will be sent free on application.

NETTAR

A TYPICAL ZEISS IKON PRODUCT.

THE CAMERA FOR EVERYBODY.

The Nettar has so many advantages that before deciding on a camera at £3 10s. or upwards the amateur will be wise to see the Nettar first. The Nettar is equipped with rapid anastigmats, is self-opening by pressing a button, thus making it as simple as a box camera, but immeasurably more efficient. The Zeiss Ikon "two-dot system" makes possible sharp pictures without special focussing by simply adjusting focus and diaphragm to respective dots and leaving them there. Give a 1/25th second exposure, hold camera steady, take your snapshot out of doors in any fair light, and you get perfect pictures. Ready for use in an instant.

July 11th, 1934

Some promoters of competitions stress the point that entries will not be judged from the point of view of technique, but that the subject will have primary consideration. The wise competitor will take care, however, that his technique is of the best, since no picture can be truly attractive which is badly produced.

The beginner often wonders what to photograph, and here again a study of past winners will be of value. Analyse these and try to discover what appealed to the judge and caused him to select these from the thousands of entries

incidents in a previously selected spot where the best use can be made of lighting and background.

The serious competitor must be constantly on the alert for ideas. He should note incidents in the world around him during the "daily round" which the camera could depict. The cultivation of an observant eye will stand him in stead when during his leisure moments he is hunting for camera subjects.

Occasions will arise when subjects crop up ready to hand requiring little posing and arranging, and the photographer

"WHAT MORE COULD WE ASK?"

Edith Buckhouse.

(This print was awarded a prize in the recent Cycle and Motor Cycle Competition.)

submitted. Look for the motive of the picture, arrangement, play of light and shade, the natural effect due to absence of obvious posing, the simplicity enhanced by an unobtrusive background, and last, but not least, the excellent technique arrived at by full exposure, careful development and correct printing.

A big percentage of awards go to studies of young children and animals. Attractive pictures of this nature have a wide appeal, possessing as they do what is known as "human interest." When on holiday at the seaside the beginner should study his own or other people's children at play and make note of incidents which may be repeated to yield attractive pictures. Having gained the confidence of his models, they may be coaxed to perform these

must be quick to take advantage of such good fortune. More often, however, a likely subject will need the introduction of a suitable figure, or is spoilt by the presence of inharmonious features or the absence of sunshine. Much patience and perseverance are needed, but given these attributes, together with quick perception and a good, all-round technique, the enthusiast will sooner or later be rewarded with desirable plums from the competition pudding.

Finally, the necessity for observing the rules and conditions must again be emphasised. Apart from the points already referred to, details such as marking every print with title, technical data, if necessary, and name and address, are important matters that must not be overlooked, or the entry may be disqualified.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

HOLIDAY PHOTOGRAPHS.

IN these present chats about holiday photographs it must be evident that I am paying some attention to subjects other than the usual seaside snapshots which are so definitely associated with ideas of holiday photography. I am doing this because I know that there are many photographers who, on their holidays, do not expend all their films on "bathing belles" and youngsters with spade and pail, but hunt around for subjects of the record and the architectural type. They visit cathedrals, churches, castles, old cottages and

so on, and like to get photographic mementoes of what they find.

Hence my advocacy of the tripod.

When I was in Winchester Cathedral lately I took only the small folding camera, $3\frac{1}{2} \times 2\frac{1}{2}$, to which I have referred, together with a light telescopic tripod. I got a permit for the day, the reasonable charge being one shilling. Although the altar screen is a much-photographed subject, and obtainable in many commercial forms, I wanted a negative of my own. I got it, but with difficulty.

I was on the point of making an exposure when a verger entered with a party of some thirty visitors, and held forth at great length. Then he brought his flock to where I was standing, and I had to protect my frail outfit from being overturned and trampled upon by massive and obviously bored sightseers. When they had departed there was a long succession of ladies, youthful and antique, who stood in the aisle in front of me and took snapshots of the screen with little box cameras. Even if I said here what I think of them I should be quite safe, as they cannot possibly be readers of these pages, or they would know better than to "snapshot" in a cathedral interior.

Roughly speaking, I gave five hundred times the exposure they were giving, and as my negative is a good one, theirs must all be bad. There is no such latitude as that in exposure.

Let me give some details of my own procedure. The screen is

light, but not glaringly white, although there was a splash of sunlight on part of it. Another part was in shadow. Close at hand were very dark oak choir stalls. Farthest away were small stained glass windows. In the print the carved detail of the

Tudor Doorway, Portchester.

stalls and the designs on the windows are properly recorded; and every figure on the screen, in sunlight or in shadow, is beautifully modelled. The exposure, on Verichrome pack film, was twenty seconds at $f/16$; not, mark you, $1/25$ th of a second at $f/11$ or $f/14$, as the ladies must have been giving.

When it came to development I kept on the alert. First appeared the little windows, then the sunlit patches, quickly and surely followed by the other tones and details in succession down to the dark seats. Then I promptly rinsed and fixed the negative, which is a good one. I am not boasting; I am simply pointing

The Reredos, Winchester.

out once more what I believe to be the best method with such subjects. Had the exposure been much less I should have had to wait for shadow detail, and meanwhile those little windows would have acquired impossible density and shown bad halation.

Other subjects that followed had varying exposures according to circumstances, between five and thirty seconds, but every one produced a good negative.

Perhaps you remember a bit of interior in an old mill, last week. A friend who saw the original print remarked that it was all very well, as no doubt I could fake a good print from any old negative. Complimentary in a way, but untrue. That print and the Winchester one are untouched prints from untouched negatives. There is no faking or modification whatever. And that is the best way of getting good technical results.

The doorway at Portchester Castle was taken without a tripod, but here again a very short exposure would have been inadequate. Although it is in an open courtyard the stone is old and dark. I gave a hand exposure of one-tenth of a second at $f/8$, and

The Camber, Portsmouth.

allowed full development to emphasise the light on the stonework inside the door.

This adjustment of exposure and development in accordance with the character of the subject and the result desired is of great importance. Hence the profoundly unsatisfactory procedure of letting someone else do the developing in the mass. Both of the subjects to which I have referred would have been ruined by such a method. Certainly I have advised the absolute novice to have his earliest exposures handled professionally, but later on, if he wants his work to be of the best he must learn to do it himself, and to mix his solutions with brains. There is no other way.

When it comes to such a subject as the corner of the Camber at Portsmouth matters are simpler and easier. We need no tripod; it would only hamper us. The box camera, with its fixed stop and single shutter speed comes into its own, and provided the light is reasonably good we can get more or less on the bull's-eye at every shot. This is the sort of holiday snap that requires very little said about it. The reredos at Winchester is a different proposition altogether, and demands that we shall put on our thinking-cap and walk warily.

W. L. F. W.

D. & P. from the Trade Worker's Viewpoint

By A. F. W.

MOST films are exposed over the week-end, so the beginning of the week is always a busy time for D. & P. works. When on Monday morning you hand that roll of exposures over the counter of the local chemist, please don't think that yours is the only spool he is going to send to the finishers to be processed.

In the height of the season it may be one of fifty, so you see it is not much good your asking that yours shall receive special attention. He may write all your instructions on the counterfoil, but to the film developer and printer it is just another spool, one of thousands.

When a tired and fed-up film developer (I say fed-up, because summer to him means long hours in the light of ruby lamps while you snapshooters are down on the beach enjoying the sunshine; and, as the scientists tell us, red is a colour that irritates the nerves and does not improve the temper), when, as I say, he picks up a spool that has yards of instructions wrapped around it, he reads them, snorts, maybe he swears, and slings it in the box along with hundreds more.

Perhaps he has got nearly a thousand films to put through the tanks, and these must all be developed, dried, printed and out again in time to maintain a six-hour service. If you want your spool to receive special and individual attention, take it to the shop in the latter part of the week. The factory has got over the week-end rush and has more time to spare.

Again, don't stick the end of the red paper down with stamp paper or gum; fold the point of the red backing underneath itself as per the maker's instructions. It makes the opening of the spool much easier.

Don't, as in some cases I have come across, put the film in an envelope, tie it round with string, bootlace or even copper wire. It's frightfully detrimental to fast working.

If you receive your film back with red paper stuck on the back of the negatives don't blame the finisher; remember that you dropped the camera in the sea. Cameras are not waterproof.

Don't blame him if little Willie has four legs and two heads. You exposed the negative and forgot to wind on the film.

Films are developed by the time and temperature method. A normal exposure will yield a good negative; under- or over-exposure cannot be corrected by the finisher.

The ordinary tank developer will not suit the fine grain of the miniature films such as Leica. Negatives are much too hard for good enlargements. Take all these to dealers who specialise in the processing of this material.

Don't buy cheap stale films; they turn all the colours of the rainbow in the developer.

Mark all panchromatics *very* plainly. Most up-to-date firms are installing the new safelights, but a good many still stick to the red lamps. Get the chemist to put your film in a red envelope provided for the purpose. This is a very effective warning to the finisher. When ordering reprints please label the negatives plainly. Nearly all the mistakes are on the customer's side, but she or he won't have it so.

Above all, even the most modern firm equipped with the latest plant is sometimes overwhelmed and forced to break service; so don't be annoyed if your snaps are not done in the specified time.

How I make my EXHIBITION PICTURES

No.
CCXXXVII.

Mr.
JAMES
THOMPSON

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"MANY years ago I was attracted to photography by a desire to attempt picture-making with the camera; and while I have had occasional lapses from my original enthusiasm, I always return to my original keenness for this very absorbing hobby. In my early years, a half-plate and stand was the only apparatus with which a serious-minded worker would ever think of attempting picture-making; and while the very small modern instrument has many advantages (weight and running costs), one feels that the critical selection which a half-plate and focussing screen gives is lacking in the more modern equipment.

"For a number of years I ploughed a lone furrow. In those days I really thought I produced masterpieces; but on becoming a member of the Glasgow and West of Scotland Amateur Photographic Association I had an awakening, as it was only on seeing my 'masterpieces' hung alongside the work of more experienced members that I realised the great advantages of club membership.

"How I made my Exhibition Pictures,' sounds like a conundrum; exhibition pictures seem to make themselves.

"My photography is done mostly during my annual holiday, and I invariably bring back a quantity of exposed plates.

These are all carefully developed, but a great many are born to blush unseen, and never get beyond that stage. Others, the more promising, are enlarged to whole-plate, but even some of these go no farther.

"The type of camera I now use exclusively is a quarter-plate reflex. I use three lenses, a 5½-in. fitted with a Compur shutter (I find the speeds on this type are very helpful), a 6-in. and a 10-in. These are all interchangeable in the camera panel. I was in the habit of using any sort of plate available at the time of purchase but now have dug myself in with one brand only, and that is Special Rapid Panchromatic plates (backed) with a 1½-times filter. I think it is imperative to master one make of plate or film; it is really surprising the difference a change makes.

"Development is by tank. Using 3 drams Rodinal and 20 oz. water at the ordinary tap temperature (about 56°), the time is 30 minutes. This gives me, I find, the correct type of negative. My output is not by any means considerable, as I only expose on subject matter that appeals to me at the time, and have frequently gone back to a particular place at different times of the day and year to secure what I was after. As I exercise considerable care in selection of subject matter I would say that all my work is straight untouched photography. The only control I use is during enlarging, the holding back, or the longer printing of a particular part, and the spotting of any pinholes in the negative.

"For some time now I have used Kodak Royal for all exhibition prints (developed with Rodinal). These are carefully exposed, and developed to finality, and fixed in acid hypo. I have also used chloro-bromide (the maker's developer), but find unless these prints are made from an enlarged negative the quality is not the same.

"I have no decided leaning towards any particular subject; everything with sunshine and shadow makes its appeal, and wonderful effects are possible in all our large towns. The difficulty in securing these is that they are only there during business hours, and it is impossible to combine business with pleasure."

THE STRONGHOLD.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

NOT content with having one go at the subject, Mr. C. Seldon—in "The Cloud Background," No. 3 of the prints reproduced on the opposite page—has another, his former shot being displayed on the same page in our last week's issue. The tree on the left appears to be the same, but it is seen from another angle; two other trees are included, and the sky setting varies considerably.

A Wise Precaution.

Which is to be preferred is largely a matter of taste, but, amended as suggested, most people would, on the whole, be inclined to select the former effort as the better, even though, in this instance, the sky has points of advantage over the other.

This impression is not so simple in its arrangement, and it is questionable if the additional trees are worth including, for their shape is not particularly pleasing, and they seem to crowd the bigger tree too much towards the left-hand edge. This does not therefore stand out so well, nor is its grace able to display itself so effectively; but, despite the lesser attraction of this example, it is a wise precaution to get into the habit of looking round a subject after having taken it from the point of view from which it first appealed, for, while it may not be productive in every case, it will be so on occasion, and, when that happens, the extra trouble will be well repaid.

Moreover, it instills the capacity for sizing up a subject so that, in time, the best possible viewpoint is instinctively chosen; but, even when that ability is acquired, it is often advisable to make a second exposure to provide against the possibility of any mischance arising in connection with the first.

Dappled Sunshine.

With a subject like No. 2, "Devon Cottage," by W. E. La Riviere, it would, however, be wise to make sure of the thing at the first shot, for, with the sunlight falling at so acute an angle, it would not stay for very long, and, if any time were spent looking about for a better viewpoint, there would be a strong probability that the effect would vanish altogether.

After making sure of the one impression, it would, of course, be advisable to have a look round, and, if anything better appeared, or if it seemed likely that the effect would be more pronounced a little earlier, another shot might be made then and there, or a note made to revisit the scene at the next opportunity.

As it happens, it does seem as though the effect would be more in evidence at an earlier hour; but, nevertheless, it is very pleasing as it is now rendered. The doorway is well placed for an appropriate figure, and, if such could be found and persuaded to pose, a most attractive picture could be made. Turning to No. 1, "Sidmouth Cliffs," by E. W. King, there is a figure, and, while he is perfectly suitable, he is so much off the map that he might just as well not be there.

Fortuitous Figures.

With the present arrangement of the setting, he should be placed just where the downward line of the edge of the near cliff meets the shore. There, he would be soundly placed and would make quite a different thing of the subject.

As the print stands, his occurrence seems to be more or less fortuitous, whereas, if he were placed as indicated, he would give point to the subject and give it a value that it does not now possess. Moreover, instead of a haphazard appearance, it would betray evidence of a definite pictorial intention, and, as such, rank infinitely higher.

The bicycle in No. 6, "Sunlight and Shadow," by C. R. Newing, seems to be included with a definite purpose. It does provide a needed accent just where one should occur, and, if nothing better could be found, it must be accepted for what it is and for what it does. All the same, it does strike a somewhat incongruous note, having regard to its comparative modernity and the ancient character of the setting, and, if something a little more in keeping could have been substituted, the subject would have appeared more finished and complete.

The sunlight and shadow itself is delightfully represented; and another

well-seen effect of sunshine, but of another type, is provided by No. 5, "A Devonshire Dale," by P. H. Speed.

Sunniness in Landscape.

In this case, the landscape is viewed against the light. In such circumstances there is a fair amount of shadow, and this sets forth and enhances the sunshine.

It could be wished, however, that the light on the strip of meadow on the right were more *in* the picture, for, like the figure in No. 1, it runs too near the edge to convey its full effect. Its slight adverse influence is re-deemed, to a not inconsiderable extent, by the bright note to its left which is afforded by the boulder in the stream; but, if the tone of the meadow were somewhat subdued, the composition would be much improved.

In other respects the subject is remarkably well arranged, the centre of interest lying in the clump of trees on the left, and that clump being nicely balanced on the other side by the darkish bush.

The dark of the principal clump of trees admirably shows up the atmospheric delicacy of the distant hillside behind, but, in view of the lack of distinction between the steep banks on the left and the water below, it is questionable if a sufficient allowance were made in the exposure.

Exposure and the Scene.

It may be explained that, with so high a proportion of shadow—a state of affairs which usually happens with a *contra jour* lighting—it is necessary to make a very appreciable increase in the time of exposure. If, as an example, 1/25th of a second were enough with the light coming from behind and falling full on the subject, the same scene, seen against the light, would need a full quarter second, and double that might be given.

From which it will be inferred that the proportion of darks in the subject governs the exposure required, and this is the reason for the old familiar maxim, which should still be followed in these days of ultra-rapid lenses and emulsions of surprising speed, "Expose for the shadows and let the lights take care of themselves."

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE SILENT WATCH," by Miss Nancy Huggins.

THE quality of impressiveness, as well as the beauty of a night scene in urban surroundings, are admirably conveyed in this nocturnal study. Notwithstanding its essential character, there is a fine feeling of light and atmosphere, yet, at the same time, it does not lose the innate nature of night-time, or present the similitude of a daylight subject.

Shades of Night.

It is seldom possible, in the country, to do much in pictorial work once night has fallen. There is rarely sufficient illumination, and, if this should happen, it is rarer still that a sense of light can be incorporated, for, as a rule, what tone there may be in the sky makes little, if any, impression on the plate.

In towns and cities, however, the opportunities of making pictures when the shades of night are falling are more profuse, for there is usually ample light, it is possible to choose the time when weather conditions are most promising, and it also seems to be the case that buildings and monuments lend themselves to artificial lighting better than anything that can be found in the country. If there happens to be a touch of mist or rain, it is well suggested on account of the great degree of reflection that occurs, and pitch black skies, which always seem anomalous, need never make an appearance.

The point is well demonstrated, and full advantage taken of the offered opportunities in this instance. Having regard to the nature of the subject, the tone values are well recorded, there is just about the right degree of tone in the upper portions, and the dark of the pedestal on the right does not seem excessive. It is necessary that it should be dark in order to throw up the lighter tone of the sphinx (1), which forms the centre of interest.

The Central Position.

It will be observed that the head of

this figure is practically dead on the centre line. The body runs off to the left, it is true, but the head, as the essential element, is definitely central. Yet the composition does not seem wrong, nor is there any suggestion of formality or inclination towards symmetry, which goes to show, once again, that there is no rule in composition that can always be regarded

of the picture space than it really does, it also tends to convey the impression that the head is off the centre.

So that, although in fact the head is central, there is an illusion that such is not the case, and the drawbacks usually associated with that position have been cleverly avoided. But, while this is an exceptional case, and it is said that exceptions prove the rule, it should not be taken that the rule in question can be broken with impunity. It should be strongly emphasised that the central position is one that should only be employed where there is a special reason for it and that reason is adequate to justify its adoption. The thing is to know when to use it and when to leave it alone, and, if any of the drawbacks mentioned—formality or symmetry—are inclined to assert themselves, it should not be chosen. If, on the other hand, the subject only appears to be properly disposed when the centre of interest is centrally placed, and no other placing conveys the same sense of rightness, there is no reason why it should not be employed.

A Sense of Rightness.

Discretion must be exercised when its adoption is in contemplation, but, if it seems right, the fact that a rule against it exists should not be allowed to exert an influence debarring its choice, and personal feeling is the final arbiter in each particular case.

That it was wisely chosen in this instance there seems to be no reason to doubt, for, as far as the arrangement is concerned, nothing could be taken away from either side without impairment, nor does it seem that either needs an addition. To the educated eye, the subject seems properly disposed, and if it seems right it must be right.

At all events, it has the merit of conveying a night effect with admirable clarity, and that it does so is ample justification.

"MENTOR."

as absolute, nor one that cannot be broken on occasion.

Symmetry is avoided on account of the differences in the masses on each side. The plinth on the right is heavy in tone and its mass is considerable. On the left, apart from the body of the figure, there is only the lamp standard. The first vastly outweighs the second, and the fact that the body is visible tends to create an illusion that the head to which it is attached is farther over to the left than it is in actuality.

The important mass of the plinth, too, helps the same illusion, for, by suggesting that its width fills more

SOME NEW CAMERAS

A Zeiss Ikon de Luxe Model.

The Super Ikonta camera for $2\frac{1}{2} \times 3\frac{1}{4}$ roll films, which the Zeiss Ikon firm (of 11, Mortimer Street, W.) introduced not long ago, with its range-finder automatically coupled to the focussing, has been such a success among those photographers who always choose high-class instruments that a hearty welcome is assured for its bigger brother—the model for $4\frac{1}{2} \times 2\frac{1}{2}$ films. This, with a Compur shutter and an $f/4.5$ Tessar of $4\frac{1}{2}$ -in. focal length, costs £18 15s.

It is made to take the new metal spools only—those spools taking standard and "chrome" film which are designed to enable the camera-makers to reduce the size of the spool-chambers and keep cameras as small as possible. In the Zeiss Ikon films the size is the D.M. 8; in Kodak it is the 616 size. It is designed for eight $2\frac{1}{2} \times 4\frac{1}{4}$ negatives or (by the insertion of a mask) sixteen half-size negatives ($2\frac{1}{2} \times 2\frac{1}{4}$ in.).

This camera has the range-finder which uses an arm carrying an extra lens of small diameter on the lens front. The camera is self-erecting, and it closes automatically; and altogether it is right up-to-date in its resources. Moreover, it is only an inch longer than the $2\frac{1}{2} \times 3\frac{1}{4}$ model. The direct-vision finder is an unusually plain guide to the picture on the film. Altogether a first-class instrument.

The Leica "250."

Although with the Leica, thirty-six exposures can be made with one loading, there are people like Press photographers, explorers and others, who find it a

disadvantage under certain circumstances to have to change a film. The latest addition, therefore, to the various Leica models is the Leica "250," which, as

the name implies, allows of taking up to 250 exposures with one loading.

Whilst the actual mechanism of the ordinary Leica is preserved, i.e., automatic focussing, combined winding of film and setting of shutter, etc., the two ends take the form of drums which project forward so that the back of the camera is still flat. The film is loaded in on one side and removed after exposure on the other. No rewinding is necessary. Apart from the outdoor workers there is the librarian, who will appreciate this model. The price of the Leica "250" is £43 18s. 6d. with Elmar lens, and full particulars concerning it are obtainable from Messrs. E. Leitz, 20, Mortimer Street, W.

The Certo "Double-Box" Camera.

An attractive little box camera that can be used alternatively for exposures of 6×9 cm. ($2\frac{1}{4} \times 3\frac{1}{4}$) or 4.5×6 cm. ($1\frac{3}{8} \times 2\frac{1}{4}$) on the same spool is the Certo "Double-Box," supplied by Messrs. Actina, Ltd., of 29, Red Lion Square, High Holborn.

The change can be effected while the spool is in place and without opening the camera, merely by turning a milled knob that indicates the size in use and the appropriate red observation window shows the position of the film. The camera is made from light metal, covered with finely grained leather. The boundaries of the pictures are ascertained by means of large brilliant finders; the shutter is simple, giving but one instantaneous exposure, $1/25$ th sec. T. and B. The largest aperture of the lens is $f/11$, which gives sharp focus from about 9 ft. to infinity. For "close-ups" a supplementary lens is used. It is an ideal ever-ready camera for the beginner, especially for holiday work. The price is 21s. od. only.

Almost a Pocket Ciné Camera.

A new Bell & Howell Filmo for 16-mm. film is always interesting to a large circle of cinematographers, but when it takes the form of a small camera, $5\frac{1}{4}$ in. long, $2\frac{1}{4}$ in. wide, and $3\frac{1}{2}$ in. deep, which weighs only 37 oz., and costs £22—and these are features of the new Bell-Howell Filmo 121—it is something special to think about.

The new Filmo takes 50-ft. chargers, such as are supplied by Kodak for the Simplex ciné camera, and loading

with these is simplicity itself.

The lens is a 20-mm. fixed-focus Taylor-Hobson Cooke $f/3.5$ anastigmat;

the camera has two speeds, 16 per second (normal), and a useful 24-a-second speed for slowed-down pictures, as well as a single-frame exposure device; and two finders, one at waist-level, and, of course, a good eye-level tubular finder.

With an inexpensive adapter any lens used in a Filmo 70 (the turret model Bell-Howell) can be used in the Filmo 121 interchangeably—a great asset when there is another Bell-Howell in the family or among a party of friends. Even Kodacolor is possible if the Cooke $f/1.8$ lens is used in the little camera.

A well-balanced little instrument, easy and comfortable in the hand, and as convenient at eye-level as any camera can be. The construction is good—die-cast aluminium, brown fabric leather covering, and starter-button guarded against accidental starting.

There is an exposure guide for the whole year, which is as informative as one can expect, seeing that the designer does not know what film the user will employ or the latitude in which it will be used. A leather carrying-case is included in the £22 outfit. Further particulars can be obtained from Messrs. Bell & Howell, Ltd., 320, Regent St., W.1.

OUR GIFT OFFER to Readers of "The Amateur Photographer"

AS already announced, our recent gift offer of an exposure meter has been so greatly appreciated by amateur photographers in all parts of the country that we are making another offer that will appeal to many readers.

A copy of the latest issue of the international annual *Photograms of the Year* can now be obtained under conditions similar to those that proved so popular on the previous occasion.

Many new readers of *The Amateur Photographer* who are keen pictorial workers have not yet secured a copy of this edition of *Photograms of the Year*. It is a handsome volume of pictures, including nearly one hundred fine double-tone reproductions of the best work by leaders in the photographic world, in addition to many pages of interesting reading matter. It is published at 5s. net.

We are offering new readers of the paper the opportunity of securing a copy on the following advantageous terms.

In this issue of *The Amateur Photographer*, and for three issues that follow, a coupon will be printed in the advertisement pages. The value of each coupon is 6d. Any reader who wishes to possess a copy of *Photograms of the Year* must collect six coupons from six successive issues of "The A.P.," fill in his name and address, and post them within a month of the publication of the last coupon, with a P.O. for 2s. only, to the Publisher, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1. The volume will then be sent by return, post free.

As only a limited number of copies are available for this offer, applications should be submitted promptly when all six coupons have been collected, and the orders will be dealt with in strict rotation.

The 6d. Coupon will be found on page xix of the advertisement pages.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

USING PAN. FILM.

SIR,—May I pass on a hint to users of pan. films?

When using adhesive tape provided, first stick a little paper to it, the size of the red window, so as to prevent sticking to glass or celluloid and causing damage; on some cameras the window may be pulled right out by the tape.—Yours, etc.,
H. W. COLLEY.

PHOTOGRAPHING THE MOON.

SIR,—It is comparatively easy—using super-speed material—to photograph the full moon through a small astronomical refracting telescope. The f value being about fourteen, a brief-time exposure of two seconds is ample. A $60\times$ eyepiece is most suitable. The best camera is a reflex; the lens being left in, improves rather than detracts from the definition.—Yours, etc.,
A. TROWBRIDGE.

THE PERFECT CAMERA.

SIR,—I have been very interested in the numerous letters in "The A.P." regarding the "perfect camera," and put down my ideas here.

The camera should have one lens only, as opposed to the finder and taking lenses of some cameras, to enable the use of a telephoto lens when required. Roll film or plate $4\frac{1}{2}\times 6$ or $2\frac{1}{2}\times 3\frac{1}{4}$, with a special addition such as is fitted to Exakta reflexes for an eye-level viewpoint, worked by a mirror at an angle of 45 degrees, and reflecting the original on to the ground-glass screen. A focal-plane shutter, 1 to 1/500th, self-capping. The whole in the convenient shape of the Exakta, which falls only a trifle short of my idea of the perfect camera. I am now using a Rolleicord, which has so far proved very satisfactory.—Yours, etc.,
M. V. ROBINSON.

MINIATURE CAMERAS.

SIR,—The *Amateur Photographer* of April 18th, 1934, dealt with miniature cameras, and the Buyers' Guide printed with the issue contained descriptions of some of the popular types. Many amateur photographers, however, who would like to be miniaturists, prefer the vest-pocket size of camera taking the 4.5×6 cm. roll film.

There should, I think, be a large demand for a vest-pocket camera taking the 4.5×6 cm. roll film as well as plates of this size, and film packs, if it had a range-finder coupled to the focussing, and a fast lens of, say, 7.5-cm. focal length, working at an aperture of $f/3.5$, and preferably $f/2.8$. A Compur shutter is, of course, a necessity. This should be easily removable. It should also be possible to use a telephoto lens such as the 6-in. Dallon $f/6.3$, which could be screwed on to the front of the shutter after removing the front and back components of the normal lens.

Such a camera would be small enough to carry about in the coat or vest pocket without inconvenience, and the larger size of the film would permit of respectable enlargements without fear of the grain of the film showing. In other words, cannot some manufacturer do, but at less cost, for the 4.5×6 cm. camera what Messrs. Plaubel of Frankfurt have done for the $3\frac{1}{2}\times 2\frac{1}{2}$ camera in their Makina II?

For people of defective eyesight a built-in range-finder is a blessing.—Yours, etc.,
F. A. SAMUEL.

(Lucknow.)

SIR,—There has been a lot of correspondence in these columns as to the merits and demerits of the miniature camera.

The possibilities of these "precision" instruments are unquestionable, as the examples we have seen in the various international exhibitions prove.

However, I think the manufacturer, in concentrating on the miniature size, loses sight of the requirements of those workers who prefer something larger, such as $3\frac{1}{2}\times 2\frac{1}{2}$ and $4\frac{1}{2}\times 3\frac{1}{4}$ sizes for pictorial work.

I firmly believe that there is still room for improvement in most reflex cameras of these sizes as to reduction of bulk and

weight. Also I cannot understand why the folding type of reflex does not receive more attention from the manufacturer. Here is the best means of overcoming the old bugbear as to the disadvantage of bulk.

I must take this opportunity of congratulating you on the excellence of "The A.P.", which I feel sure has been the means of bringing many a beginner to the advanced worker stage.—Yours, etc.,
JACK ARNOLD.

FOGGING ROLL FILMS IN ADAPTER.

SIR,—Some of your correspondents seem to have missed the point about the fogging of panchromatic roll films when in use in roll-film adapters for plate cameras. It is not the red window that is the prime cause of fogging, but the design, for in most cases these devices are so constructed that the film is wound on to the take-up spool inside out, and, of course, until the film is completely wound red light from the window can stray along the back of the adapter to the exposed surface of the film. The backing paper of pan. films is, I find, sufficiently opaque to resist the action of sunlight, at any rate for a reasonable time. Personally, I have never had any fogging trouble when using films like the Agfa Superpan and Kodak Supersensitive in a roll-film camera with an unshuttered red window.—Yours, etc.,
R. E. S. WHITE.

PHOTOGRAPHIC ART AND CRAFT.

SIR,—I would not arouse a sleepy argument because of my interest in discussion, but the art and craft of the pictorialist is as crooked a business as one could meet.

Straight? There is nothing straight about it! Controlled? It is control from beginning to end! What has light actually to do with the pictorialist? It comes in at the "tail end" and causes a mild disturbance. On top of that, and, incidentally, because of the necessary achievements of the mathematician (to mention him alone), it happens that the plate records more than the artist sets out to record. If this brings in another matter altogether, I deliberately bring it in to suggest something of how lightly the artist should lean upon straight photography. The artist doesn't want you to see, so to speak.—Yours, etc.,
C. S. GRANT.

THE WORK OF MR. ALFRED WATKINS.

SIR,—I was glad to see the portrait of Mr. Alfred Watkins reproduced in "The A.P." for 27th June, and also to read his very interesting article.

How many of us "enthusiasts" fully realise the importance of his ideas and inventions in photometry and methods of development?

Alfred Watkins' systems were the result of patient experiment carried out by a pioneer in the days when photography was neither simple nor as comfortable as it is to-day, and all honour is due to him.

Thousands of "snapshotters" all over the world have reason also to be grateful to him, through the "D. & P." man, and finally there is the enormous public, who, although not practising photography themselves, quite unknowingly pay homage by reason of the fact that "time and temperature" is universal in the technical side of the great film industry.

In conclusion, let me remind all your readers of the words of the late Lord Crawford, President of the Royal Photographic Society of 1910, who, when personally presenting the Progress Medal, said, "The mere fact of this Society giving the highest honour at its command to Mr. Watkins this year, stamps his methods and inventions with a significance which no other Society in the world could give to them."

I feel sure that all photographers will join with me in tendering grateful thanks to Mr. Watkins for making our photography so much easier, and also in wishing him good health and many more years of active participation in our common hobby.—Yours, etc.,
EDWARD H. AUSTIN.

Rolleicord

THE ROLL-FILM MIRROR REFLEX CAMERA FOR EVERYBODY

HERE is a camera of the Rolleiflex type, produced to satisfy the demand of those thousands of photographers who have always longed for a Rolleiflex. Embodying many Rolleiflex features, the Rolleicord is a masterpiece of fine workmanship, made possible through years of experience in the production of multiple lens cameras. Economical to use—takes 12 pictures $2\frac{1}{2} \times 2\frac{1}{2}$ on 8-exposure $2\frac{1}{2} \times 3\frac{1}{2}$ roll film. Round focussing knob and meter scale always in ready position. Alternate use of Filter, Proxars, Panorama Head Stereo Fitment, Focussing Extension Hood and Iris Stop. Supplied in a unique "instantly ready" case for £1 extra.

Yours for **24/6** and 8 more similar monthly payments.

ZEISS IKON CAMERAS and PANCHROMATIC FILMS

In response to numerous applications we would say that, with the exception of the Box Tengor, all 1934 model Zeiss Ikon roll-film cameras are safe for use with panchromatic film. We have not adopted the sliding cover over the window, as in our opinion this fitting is not entirely satisfactory. Obviously, when the sliding cover is removed for inspection it is possible that the light may damage the film. The Zeiss Ikon system makes the red observation window safe by light trapping the window itself, thus effectually preventing any extraneous light reaching the film.

Zeiss Ikon roll-film cameras of earlier series can be fitted in most cases with the light trapping mentioned at a small cost. In such cases the cameras in question should be sent in to us through your dealer.

Filming Night Scenes

By
SIGURD MOIR.

THE present is a most suitable time for the filming of night scenes. In town, decorative illuminations and neon signs are in full operation long before nightfall—which means that the lingering daylight can be made to bring out greater detail in various scenes without in any way sacrificing the familiar "atmosphere." And in the country (hardly as yet explored for possibilities of night filming) little indeed can be accomplished during the darker evenings of the year.

Weather conditions, too, are usually more suitable at this time of the year, and in both cases a good assortment of valuable shots should be readily obtainable.

In Town.

Atmosphere, in town filming, is related in the main to the evening bustle of parties bent on relaxation or pleasure-seeking. It connotes "the pictures," theatreland, early dinners, restaurant suppers, cabaret and late dancing. A complete film can be made to deal with almost any one of these aspects—but they mean so little to the average serious worker that he may be better advised to make a comprehensive film of the more familiar aspects or to confine his activities to outside filming. Here almost as many different effects are to be obtained, since crowd and weather conditions are by no means constant.

Some excellent results can be obtained in the streets after a shower of rain—when the pavements set up a brave glitter and quaintly-distorted reflections are to be recorded in abundance. To secure these scenes, it is usually best to shoot from an angle of forty-five degrees; though in any "one-way traffic" thoroughfare the camera may be erected upon an island refuge and the traffic shown fleeting by in the same direction on either side of the picture. The effect of scenes such as this has to be seen to be appreciated.

In town work, detail is not as a rule important—many picturesque scenes being formed by the bare

lighting alone. This means that quite ordinary equipment can be made to yield effective results.

Occasionally, however, it may be desired to show greater detail in the streets and in characters concerned with the piece. In such cases, the $f/1.5$ lens and super-speed film enable much detail to be rendered without any assistance from special lighting, whilst in extreme cases (i.e., in stage, theatre-vestibule and restaurant shots) recourse can frequently be had to the half-speed intermittent.

This, of course, should not be used in the filming of scenes which embrace very fast action.

Country Work.

Very little in the way of night filming has yet been performed in the country. However, some very good casual shots have already been secured with the aid of ordinary car lighting.

The car itself should be introduced at once (in order to explain the lighting) and this can be done by showing the increasing glare of approaching

lights over a crest in the highway. Then the car itself can be shown passing by to stop outside a large and well-lighted inn. From this point it is easy to link up continuity interiors with the various associated shots.

Full use should be made of bar interiors and atmospheric close-ups. Occasionally, too, the car lights can be arranged in such a way that they introduce secondary or "modelling" lighting to a shot of any character leaving through the doorway of a brightly-illuminated parlour.

Certain sign-posts and dangerous localities are also occasionally floodlit, and here again is a valuable opportunity to indulge in some effective atmospheric work. Most of the shots can be made more convincing if full use be made of the twilight period—a combination of fading sunset and floodlight being ideal for the type of work under discussion.

Although much satisfactory work can be done with ordinary equipment, it is very frequently necessary to use super-speed panchromatic film. This

The Battersea Power Station at night with clouds of illuminated smoke and passing river traffic makes a good subject for the amateur ciné worker who wishes to attempt night filming.

is normally faster all round than any other type of film, in addition to which it is infinitely faster to incandescent lighting.

Apertures like $f/1.5$ and $f/1.9$ are very much appreciated where ordinary "straight" interiors are to be recorded on the film, though it goes without saying that finest screen contrasts and sparkle are mostly in evidence where the lighting is brilliant.

When actually filming, the camera

should not be panned or swung about. And it is better to cut the shots direct in preference to fading or dissolving from one scene to another.

In any film of night associations the essay should be made by abstraction as distinct from documentary treatment. This can be effected with ease, owing to the richness of atmospheric quality in the scenes concerned.

A good length for the film is a more or less definite 200 feet. If the particular subjects embraced permit, as

much as 400 feet may be retained from the shots without introducing monotony.

Titles should be used as sparingly as possible—not that any large number should be found necessary. If possible, too, the wording should be arranged in the form of white-spot letters on a dark ground. This has some resemblance to the effect which obtains in a multi-lamp electric sign, and for this reason serves to strengthen the work.

Cleaning Your Films By "ACTINOGRAPHIST."

Brilliant lighting and a suitable screen are much appreciated by all serious projectionists. Yet it is not generally known that clarity and the definition of screen images can be satisfactorily maintained by the adoption of cleaning methods.

ALL films require careful and methodical cleaning at intervals throughout their active employment—though whether these intervals be long or short depends entirely upon the manner in which the films are handled.

Films treated with ordinary consideration should require cleaning not more than once in every hundred runs through the projector. Which is all to the good, since frequent cleaning tends to harden the base and so to destroy its flexibility. Against this, however, films may be so neglected as to require cleaning after only a short period of active use.

Cleaning Accessories.

Accessories for film cleaning are available in the form of complete cleaning outfits. Proprietary cleaning fluids are also obtainable at fairly moderate prices.

Both the above are quite satisfactory in fulfilling the purpose for which they are intended—i.e., the cleaning of small and moderate lengths of film; but special apparatus is preferable where it is desired to treat greater lengths and feature-subjects.

Illustrated below is a simple accessory which has been

specially devised for the rapid and effective treatment of full length (400-ft. reels) of 16-mm. film. The apparatus has been proved very satisfactory in continued use, cleaning the films in only a fraction of the time occupied when the operation is undertaken by the more clumsy "hand-pad and bench" method.

Practical Notes.

The cleaner consists simply of two pairs of chamois-leather pads, the first mounted upon rotating bobbins and the second forming a flat fixture only a short distance away.

Kino, the amateur ciné society formed in November last, has organised a Ciné Festival to be held at King Alfred Schools, Golders Green, London, on the 21st and 22nd of the present month. The important day from the serious amateur point of view will be Sunday the 22nd. On this day, lectures dealing with various aspects of cinematography will be given (in person) by H. P. J. Marshall, the Hon. Ivor Montagu and others.

Amongst the productions which will be included in the evening programmes are the much-discussed "Thirst," a recent film by H. P. J. Marshall and one of Eisenstein's outstanding classics.

Further information regarding the Festival can be obtained by making early application to the Hon. Organising Committee, Kino Festival, 1, The Gables, N.W.3.

In use, the first or rotating pads are more or less saturated with cleaning fluid, the film being threaded through both these and the drying-pads before it is collected upon a take-up spool. (Actually, the film is drawn through the apparatus by means of turning the take-up, tension on the pads being regulated by using fewer or additional layers of chamois.)

The take-up spool must be kept at such a distance from the drying pads that any remaining fluid has completely evaporated from the film by the time the latter reaches the spool. With the first pads saturated, too, the film must be kept well on the move; as the pads dry out, turning can be allowed to proceed more slowly. With these precautions, even action and thorough drying may be assured. On no account must the damp pads be permitted to become exhausted. As soon as dry film is observed to be coming through these, more of the cleaning spirits must be applied. The second or drying pads require frequent changing—which is due to their becoming soiled with dirt from the film surfaces.

Cleaning Fluids.

Several volatile liquids have from time to time been used for the purpose of cleaning films.

In the early days, crude mineralised methylated spirits were generally employed; but these soon gave way to the purer industrial methylated spirits (denatured), chloroform, carbon tetrachloride, wood naphtha, rectified spirits and redistilled alcohol.

A mixture which gave me entire satisfaction over a number of years consisted of small quantities of castor oil (to prevent loss of flexibility) and formalin (to prevent fungous formations on the emulsion) in rectified spirits. But it is nowadays possible to purchase "surgical spirit" (conveniently marketed at about one shilling per pound), which effectively functions in much the same way.

Wood naphtha costs about ninepence per half-pint (three times the price of industrial spirits), and may therefore be regarded as the cheapest of satisfactory cleaners which are easily obtainable.

Chloroform too readily evaporates, and is also somewhat unpleasant to use—though it is an excellent constituent of "mixed" cleaners.

Sunday, June 3rd, proved to be a landmark in the activities of the ciné section of the Golders Green and Hendon Radio Scientific Society. The section's first production unit spent some hours on Hampstead Heath shooting local colour and other things. This section of the film is to be completed before Saturday, July 17th. That evening all members will be meeting on the premises of the Regal Cinema, 765, Finchley Road, N.W.11. The society's river outing has been fixed for July 15th. A launch has been hired to take members from Richmond to Walton and back, and a film record will be made of the occasion. More members are required, and interested readers of "The A.P." especially those who are resident around Hendon, Golders Green and Hampstead, are asked to communicate with the Hon. Secretary, Mr. I. A. Shoot, 179, West End Lane, N.W.6. Telephone, Maida Vale 7902.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Exhibition of Prize Prints from "The A.P." Competitions is now open at the house of the Royal Photographic Society, 35, Russell Square, W.C., and affords a good opportunity for readers who have entered these competitions to see the prizewinners and compare the originals with the reproductions that have appeared in our pages. The special prize for the best print entered in the monthly competitions for the past twelve months is awarded to W. A. Hooker, of 32, Princes Avenue, Great Crosby, for his strikingly original picture "Decoration." A reproduction of this print will be given later.

Ilford, Ltd. have just issued a useful little booklet with the title "Photography as an aid to Scientific Work." The contents refer to Astronomy, Biological Sciences, Chemistry and Physics; Geology, Mineralogy and Petrology; Medicine and Surgery; Clinical Photography and Radiography, and Metallurgy and Metallography. In each section full information is given of the appropriate Ilford materials to employ, and the list is an illuminating commentary on the extent of the firm's products, many of which do not normally appear in the regular price lists. It is a booklet that every serious worker should possess, and copies will be sent free to any reader of "The A.P." on application to Ilford, Ltd., Ilford.

A Camera Club has been organised in Runcorn, Cheshire. A meeting-room and a dark-room have already been provided. The Hon. Secretary is W. Woodbridge, The Cottage, Higher Runcorn, and he will be pleased if all amateur photographers in the locality will apply to him for full particulars.

A change of secretaryship is announced by the Kilburn and Willesden Photographic Society, and Mr. E. E. Telfer will now occupy this position. A word of appreciation is due to the retiring secretary, Mr. H. F. James, who for a period extending over many years has filled this position in a very capable and efficient manner. He has been unanimously elected a Vice-President. The Society has been in existence nearly thirty years, and at present is fortunate in having a number of willing and capable workers. The K. & W.P.S. (locally known as "The Kiwis") is the only photographic society in N.W. London, and as such offers a very cordial welcome to all local amateur photographers. The Hon. Secretary (Mr. E. E. Telfer, 14, Robson Avenue, Willesden, N.W.10) will be pleased to send full details of syllabus, subscriptions, etc., on receipt of a postcard.

A change of Secretary in the Hammer-smith Hampshire House Photographic Society has been made. The Hon. Gen. Secretary is now C. E. Homer, The Lodge, The Avenue, W.4.

The Northern Photographic Exhibition will be held in the City Art Gallery, Manchester, from December 8th, 1934, until January 19th, 1935. The last day for entry forms will be November 7th, and last day for exhibits, November 14th. Particulars and entry forms are obtainable from the Hon. Exhibition Secretary, I. Chapman, 25, Radstock Road, Stretford, Manchester.

At a recent meeting of the Council of the Royal Photographic Society, it was reported that the sum of £450 had been received from the executors of the will of the late Dr. G. H. Rodman, being the bequest to the Society, less duty, and that in his will Dr. Rodman had made the following reference to the bequest: "To the Royal Photographic Society of Great Britain I bequeath the sum of five hundred pounds to be applied for the advancing of the work of the Society in such a way as the Council may direct, and for the providing of a special bronze medal to be known as 'The Rodman Medal,' to be awarded annually at the exhibition for outstanding work preferably of a Photomicrographic or Radiographic nature."

It is not commonly known that the Leica camera is playing an important part in museums and libraries, as it allows of keeping records of almost everything with the minimum of expense as compared with plate size cameras, and the sorting of a film containing 36 or even 250 exposures is considerably easier than the equivalent number of plates or film sheets. In libraries the Leica is used for copying valuable documents or whole books. When special reproduction outfits are provided hundreds of pages can be reproduced in a very short time.

It is not necessary to make enlargements of the negatives of pages of books. A special reading desk, i.e., an enlarger, on the baseboard of which is placed a box containing a mirror and a ground-glass screen, is provided for the convenient reading of manuscripts by way of projection, without the expense of making prints. This method is used by many a foreign historian who comes to the British Museum for the purpose of perusing ancient books which he will not be allowed to remove. The books are copied in a few hours, and the negatives are read by projection.

An exhibition of photographs, including a loan collection of infra-red and other photographs taken by *The Times* on the India and Eastern Route, are exhibited by Imperial Airways at Gieves Gallery, 21, Old Bond Street, W.1. The exhibition was opened by the Marquess of Londonderry, Secretary of State for Air, on Monday, July 9th, and remains open until July 21st.

EXHIBITIONS and COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers. —Entries, July 31. Rules in the issue of June 27. —Lucerne International Salon.—July 7-29. Secretary, International Salon of Photography, Lucerne. Derby P.S. Jubilee Exhibition.—July 21-August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15. Applications for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers, please copy.)

"All Britain" Photographic Exhibition (Organised by Scarborough Amateur Photographic Club).—Entries, July 28. Open, August 31-September 15. Further particulars from Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20-25. Entries close the last mail in July. Particulars and entry forms can be obtained from the Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Entries, August 1; open, August 24-September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Entries, August 24; open, September 24-30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan. —Last day for receiving prints in Tokyo, August 31. Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shinbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6; sending-in day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Further particulars from Salon Committee, Chicago Camera Club, 137, North Wabash Avenue, Chicago, Ill., U.S.A.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26-September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowderska 8, Poland.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; Exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935. Entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr. 69, Antwerp, Belgium.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, D. Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Glazing Matt Prints.

Is there any way of treating a matt paper to make it glossy for reproduction purposes? I get better tones on a certain matt paper than I can get on any glossy one. C. S. G. (Thundersley.)

Some matt papers assume a certain amount of gloss when squeezed down to glass, in the same way as glossy papers, but we know of no really satisfactory method of doing anything of the kind. It does not follow by any means that a glossy surface is necessary for reproduction purposes, and if you have a print on a matt paper with good tone values, that is all that is necessary for securing the best blocks that can be made.

Copyright.

I was paid a fee for reproduction of one of my photographs in a local paper; am I liable for infringement of copyright if I sell the same subject to another paper? H. R. W. (Burnham.)

If the fee you received for the print was paid merely for the right to reproduce in the local paper, you can do what you like with copies of the print elsewhere. The copyright remains with you, unless you disposed of it to the paper which reproduced the print. In all such cases it is advisable to have it clearly stated whether payment is for reproduction only, or for acquiring the copyright.

Composition.

Can you tell me of a good book—not expensive—about pictorial composition in photography? D. McD. (Swanage.)

We cannot call to mind any cheap book that deals at all adequately with pictorial composition. We know of no better means of acquiring sound ideas on this subject than the study week by week of the article we publish under the heading of "Pictorial Analysis," and even the criticisms of the beginners' prints impart a great deal of information about composition and kindred matters.

Stops and Definition.

Does stopping down actually alter focus? If I focus at full aperture, and then stop down to $f/32$, is it necessary to re-focus? J. H. H. (London.)

There are a few forms of lenses in which a very great alteration in aperture may slightly shift the focus. In the ordinary way, however, you may disregard this, and if you focus with full aperture and then stop down to $f/32$ it is hardly likely that there will be any fault to be found with the definition.

Value of Stops.

I have bought a double-extension camera. How is the focus altered when the camera is extended, or how should I calculate the f number when working at 3 ft. or so? E. E. (Belfast.)

There is no question of alteration in the focus of the lens in the case you mention. The stop values, however, are calculated for the lens when focussed on infinity, and if you focus on a very near object the f number no longer holds good. The way to find the new value of the stops is to measure the distance from the diaphragm of the lens to the focussing screen when the lens is focussed for distance. Then make a similar measurement when the lens is focussed for a near object. A simple proportion sum will then give you the new value of the stop; because, as the short extension is to the long extension so is the original f number to the new f number.

Sunrise Exposure.

Could you give me a rough idea of the exposure required for photographing the sunrise from the top of one of our mountains. I cannot go below $f/6.5$. K. H. E. (Ambleside.)

It is quite impossible to suggest a definite exposure. It would depend upon the character of the particular morning, and at actual sunrise even a few minutes of time makes a difference to the exposure required. Any pronounced redness of light, too, would also make a great

difference, especially with non-panchromatic material. Further, you do not suggest what kind of landscape, if any, is to be included. All these points make it quite impossible to give you definite information, and if we suggest about $1/25$ th of a second at $f/8$ you must realise that that may be more or less wide of the mark.

Diapositives.

I have a handbook which uses the words diapositives and di negatives. Is the "dia" before the words correct? I cannot find the words in the dictionary. W. P. (Cullercoats.)

The prefix "dia" is a Greek one meaning "through." A diapositive is therefore a transparency such as a lantern slide, and is thus distinguished from a positive image in the form of a print. The word "dianegative" is more unusual, although it is, of course, possible to have a negative image on a base that is not transparent, and therefore cannot be looked through.

Combination Print.

I have to photograph the interior of a church, but the exposure necessary for the shadow detail means there will be clogging of the window lights. Is it possible to make a print for the interior and another for the window itself, and superimpose one on the other, then making another negative? L. J. B. (Thame.)

The difficulty you describe is a very common one, but can be successfully overcome by properly adjusted exposure and development. There is no reason, however, why you should not make two negatives, the second one having a sufficiently short exposure to record the detail of the window only. A combination print could then be made and a new negative produced from it. The most likely trouble in such a case would arise from the fact that the first negative would almost certainly show a certain amount of halation around the window, and with this foggy surrounding the clear-cut detail of the window would not harmonise.

Mass Production.

I have to make two gross of quarter-plate prints, and am trying to work out a mass production method. Could I develop fifty at a time in dilute solution, and leave the lot into water when done? Is there any means of estimating the quantity of developer needed? What is a simple method of taking the curl out of the prints? J. C. (Manchester.)

We regret that we cannot see any way of advising you helpfully on the matter you raise. Anything like the mass production methods you suggest would probably result in very unsatisfactory prints. A firm doing mass production work of the kind would make the exposures on strips of bromide paper by means of electric printing machines. The strips would then be run through successive tanks, and the prints finally separated after being dried and flattened in a special machine used for the purpose.

Lettering Print.

I have a print intended for reproduction. Some lettering is to go across it. Should this be done on the photograph, or on the half-tone block? M. H. (Anerley.)

The lettering must be done on the print before the block is made.

The VOIGTLANDER **"Perkeo"**

Here's a beautifully made 3×4 cm. camera with four important improvements. You focus, before or after the camera is opened, by a milled knob on the side. The baseboard drops, and the front glides forward ready to take. An optical direct-vision finder gives you greater accuracy. And after the picture is taken the camera is closed at any focussing distance. It takes 16 exposures on a V.P. size film, and with a Voigtlander Skopar f/4.5 lens, in delayed-action 3-speed shutter, costs £7 15s. F/3.5 models £10 17s. 6d. and £12 15s. Ask your dealer, or write below, for full details.

READY IMMEDIATELY ! *A NEW BOOK*

MONEY MAKING PHOTOGRAPHY

PRACTICAL MODERN METHODS

3/6

by Wm. Alexander. 114 pp. and illustrations

(By Post 3/9.)

ENTIRELY practical and attractively written. All the methods described are followed by the author who claims that any keen photographer may, by following the advice given, find that his camera can be a really profitable instrument. Those who already make money by photography will find many new ideas in this helpful book.

CONTENTS: Part 1. Profitable Home Portraiture: Preliminary Practice; Apparatus, Focussing, etc.; Home and Garden Work; Preparing Prints, etc.

Part 2. A Modern Miniature Studio: Economical Advantages; System; Finishing Room; Advertising; Sequence Portraits; Money Matters.

Part 3. Profitable Commercial Photography: Going after Jobs; Albums; Copying Portraits; Objects d'Art; Night Snapshots; Profitable Transfer Process.

Part 4. Modern Films: Action of Light; Modern Films; Exposure; Developing; Enlarging; After-Treatment.

ALSO JUST PUBLISHED: SECOND EDITION OF—
MODERN PHOTOGRAPHY WITH (Same Author)
MODERN MINIATURE CAMERAS 3/6

FOUNTAIN PRESS, 19, Cursitor St., LONDON, E.C.4

THE London Salon of Photography 1934.

SENDING-IN DAY, Wednesday, August 29th.

THE TWENTY-FIFTH EXHIBITION promoted by the Members of the London Salon of Photography will be held at The Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1, from SATURDAY, 8th September, to 6th October, 1934.

CONDITIONS OF ENTRY (Please read carefully).

No. 1. Pictures from exhibitors in the British Isles must not be framed; but may be mounted. Each picture must bear on the back, clearly written—(a) name of artist; (b) number and title of picture; corresponding to particulars on the Entry Form.

No. 2. When mounts are employed, they should conform to the following sizes—25×20, 20×16, or 15×12, but no mount to exceed 25×20; and it is suggested that white or light-toned mounts be employed wherever possible.

No. 3. Pictures from abroad must not be mounted (or framed), but should bear full particulars as above.

No. 4. Pictures which are sent unmounted will be suitably mounted by the Salon Committee, and all accepted pictures will be shown under glass.

No. 5. All pictures should be sent by parcels post, packed flat, and properly protected with stiff cardboard and adequate wrappings, addressed to: THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY, 5A, PALL MALL EAST, LONDON, S.W.1.

No. 6. The sending-in day is Wednesday, August 29th, 1934. All pictures for the Exhibition must arrive at the above address on or before this date. Exhibits may be delivered by hand at the Gallery on this date only.

No. 7. The Entry Form, properly filled in, must be sent with the pictures, together with entry and packing fee of 5/- (this fee covers any number of pictures from one exhibitor).

No. 8. To avoid Customs complications, all entries from without the United Kingdom must be sent by post and without prices marked on the prints. Packages containing such entries should be clearly labelled: "PHOTOGRAPHS FOR EXHIBITION ONLY. NO COMMERCIAL VALUE. TO BE RETURNED TO SENDER."

No. 9. All pictures sent by post will be repacked and returned carriage paid, after the close of the Exhibition.

No. 10. In view of application being made from time to time to The London Salon of Photography for permission to reproduce pictures from the walls of the Gallery, exhibitors are asked kindly to signify on the Entry Form whether they have objection to such permission being given. The copyright, in all cases, remains the property of the authors of the prints.

No. 11. The Committee assure intending exhibitors that the utmost possible care will be taken of all work submitted, but they do not accept any responsibility for loss or damage, either during transit or at the Gallery.

The submission of pictures will be understood to imply acceptance of the above conditions.

Due notification of acceptance of pictures will be sent out as soon as possible.

All work submitted to the Selection Committee will be carefully and impartially considered, and no preference will be given to pictures by Members of the Salon.

All correspondence must be addressed to the Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.

Readers of The Amateur Photographer & Cinematographer who are preparing work for this year's Salon may use this page as an ENTRY FORM and send with their pictures.

SEE CONDITIONS.

Intending Exhibitors who are unable to secure extra Entry Forms in time may prepare their own on plain paper provided the conditions of Entry are adhered to.

FORM OF ENTRY.

TO THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY.

Sir,—I beg to submit the undermentioned Photographs for the consideration of the Selection Committee, and I enclose Postal Order of the value of 5/- to cover Entrance Fee and the cost of return postage (see conditions 7, 8, and 9).

Publishing

● **OFFICES.**—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3383 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 28 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Portland Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 160, Deansgate, Manchester, 8; 268, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withhold advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

The 'TRIPOCANE'

Think how handy! A complete Telescopic Tripod contained in a walking-stick.

The tripod of the "Tri-pocane" is 4 ft. high when extended for use. It is light, yet remarkably rigid.

The Tripod is contained in a handsomely malacca-finished cane made of compressed fibre, with horn ferrule.

In appearance the "Tri-pocane" cannot be distinguished from an ordinary malacca walking-stick. Its length is 3 feet. Supplied with removable handle, also with handle with swivel fitting, not detachable from cane.

A HOLIDAY RECORD

WITH A

Rolleicord

will give you photographs such as you've always longed for. This camera places within everybody's reach the possibility of possessing a Roll-film Mirror Reflex Camera of the Rolleiflex type. It possesses many of the patented and exclusive Rolleiflex features, such as a separate finder lens; seeing the whole of your picture on the ground-glass screen; one-lever Compur shutter for both setting and releasing; compensation for parallax; patented film guide; frame finder, etc., etc. The illustrations show the beautiful compositions possible with the Rolleicord. The Rolleicord is cheap to run, giving 12 exposures on 8-ex. $3\frac{1}{2} \times 2\frac{1}{4}$ roll film.

ASK YOUR DEALER TO DEMONSTRATE

or write for Rolleicord and Rolleiflex brochures from the

Sole Importers:

The all-British SOHO REFLEX

All who are primarily concerned in possessing a camera which may be relied upon for the finest possible work under the most exacting conditions, will find in the British-made Soho Reflex an instrument which will prove equal to every demand. Full information as to various models, and fitments, and the lenses available, will be forwarded on request.

In addition to its many other uses the Soho Reflex is invaluable in the studio for children's portraiture and similar work, where quick focussing of a difficult subject is essential.

Soho Cameras are world famous. There's a Soho Model British Camera to suit every purpose and pocket. Order from your dealer, or write for list to

SOHO LTD.

THE REAL THING.

Holiday Precautions

THE holiday period is the time when almost everyone appears with a camera, ranging from the ubiquitous box camera to the ultra-expensive modern miniature. Out they come on the beach, on the road, in the camp—in fact, everywhere where man spends his leisure days. But, alas! there will be many disappointments among those crowds, mostly for the lack of a little precaution.

Troubles with New Apparatus.

Probably the first mistake that most people make is to purchase a new camera a few days before the exodus to fresh surroundings. They find themselves with a new instrument, and are under the impression that all they have to do is to point it at the chosen subject, press the release, and a beautiful picture is sure to result.

Afterwards they realise that they forgot to set the aperture correctly; or they had the shutter set for "time" when they took the snapshot; or they forgot to focus for the close-up subject, having just taken a distant view.

These are not all beginners' mistakes; quite old hands make them under the stress of the holiday fever. Such a simple precaution to take, too—merely the purchasing of the instrument a few days before the time when it will be required, and the exposure of a film or a few plates, and these duly developed and printed.

Care of the Camera.

Warnings galore have been given about sand when taking the camera to the seaside, warnings that still pass unheeded, as any frequenter of holiday resorts can verify. There is such a great temptation to put the camera down on the sand when one is waiting for a swim, after having exposed on the bathing group. At all costs this should be avoided. The box camera will soon give evidence of this form of ill-treatment by its shutter refusing to work, while the more expensive folding camera will get sand in all sorts of inconvenient places. Even the compact miniature camera will

Some practical suggestions for the amateur photographer holiday-making at the seaside or in the country during the summer months.

be the worse for even a few particles of sand.

Cases should be used religiously, and carefully shaken out at the end of each day, in order to remove superfluous dust and sand. Also the strap from which the case is suspended should come in for attention from time to time; a most unfortunate thing it is if the strap should give out when clambering up the cliffs or during like vigorous pastimes.

The Holiday Spirit.

Care should also be taken that the camera does not receive hard knocks on these expeditions; such an occurrence may easily ruin the instrument for the rest of the holiday, and leave the owner faced with a bill for repairs at the end.

Photographs from boats are very fascinating, and many holiday-makers will certainly wish to get pictures of graceful yachts skimming over the water as they pass their own craft.

It is a very simple matter to drop a camera overboard while attempting this branch of photography, since the photographer will have his whole attention on his subject, and a lurch of the vessel upon which he is travelling may cause him to loosen his hold on the instrument.

It is a wise precaution, therefore, to have a sling of some sort round the neck or shoulders as a preventive of this distressing accident. The new ever-ready case is a very useful adjunct in this respect.

Sunshine is an excellent thing for the holiday-maker, but it does not improve cameras, especially those with wooden bodies, to be left exposed to it for long periods. The heat is liable to warp the camera body, and also to perish the leather bellows, if any. This precaution is again covered by always keeping the camera in its case when not in use.

Pictorial Work.

Some photographers go on holiday with the avowed intention of only taking "pictorial" subjects. This is a very nice ideal, but they lose a lot of fun, and often a lot of possible pictures, by being sparing with their exposures. This kind of enthusiast is so anxiously on the look-out for real "pictorialism" that he fails to take half the things which have possibilities as pictures, and at the end of his holiday has nothing to which he can turn as mementoes of his visit to the particular resort he favoured.

There is no doubt that the beauty of holiday photographs lies in their multifarious records of different things seen and done—oddities, picturesque corners, unusual humans, friends in unaccustomed costumes. None of these should be neglected, even if it seems a rather extravagant use of sensitive material.

Materials.

Holiday time is the time to be really reckless in your use of negative material, always remembering, of course, to aim at getting a decent exposure. Odd corners of these pictures may be made to grace the exhibition walls in the future, even though they seem

merely records at the time of exposure.

"Use the films or plates you always use at home" is a precaution constantly reiterated in these pages. If you are likely to be in places where these are unobtainable it is wise to take a stock with you. But the astute amateur will become accustomed to a well-known standard make at home before he goes, and thus the problem is automatically solved.

"Keep your camera always with you" is another wise precaution. It is sometimes left at home when strenuous games or climbing is the order of the day; but, as a matter of fact, those are just the times when it is most needed, so it should be strapped securely on the shoulder; and the slight extra weight carried,

especially in the case of the miniature camera, will hardly be noticed.

The packing of exposed plates or films until the return home is a much neglected business. Spools are simply put into suit-cases loose, and allowed to get thrown about with clothes. Plates are placed in plate-boxes without being firmly fastened down with adhesive tape and properly marked, and the erring photographer, when he finds his films marked or his plates fogged, blames everyone but himself for his troubles.

Thus it will be seen that a few simple precautions may save many disappointments, and the trouble taken will be amply repaid by the pleasure experienced in looking through the holiday photographs in the long winter evenings.

Avoid getting the camera wet.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Summer Skies.

During the duller months of the year I often get quite satisfactory skies in my prints, but at this time of the year I am often unsuccessful, especially when the sky is largely blue. Is it really necessary to use filters? What do you advise? I am not an "advanced worker."

E. S. T. (Norwich.)

Even if you are not an advanced worker there is no reason why you should not make every effort to secure good tones in your prints, in the sky and elsewhere. The reason why your winter skies are better is that they are so often tones of grey of varying depth; while in summer it is a case of rendering blues in appropriate tones.

The cloud effect shown in the illustration was taken towards sunset on a June evening. It was sufficiently strong in contrasts of light and shade to come out very well on ordinary orthochromatic film without a filter. In fact, similar effects were recorded years ago on ordinary plates, but the exposure was generally cut down to a minimum, with the result that the landscape, if included, was badly under-exposed.

Plates, films and filters.

Modern orthochromatic plates, and all films, do this sort of thing much better, and the exposure may safely be fuller. It is a different problem, however, when there is blue in the sky; and it must be remembered that however light the blue it must not be (mis)represented in the print by blank paper. In a black-and-white print, light blue must be represented by a light grey, and a darker blue by a darker grey. It is to cut out some of the over-active blue rays that a yellow filter is used. Even a pale one, which necessitates very little extra exposure, will help; a very deep yellow filter, and still more a red one, may make the blues come out darker than they should. This is called "over-correction," and although valuable in certain kinds of record work is not advisable for pictorial purposes.

We certainly advise you to have a light or medium filter, both if possible, available for slipping on to the lens, and to use one whenever you are including blue sky. You must also avoid over-development of the negative. An efficient lens-hood is also helpful.

Action Pictures on the Beach

By W. S. G. PROCTOR.

THOUSANDS of photographs that are taken at the seaside by holiday-makers are merely snaps of family groups stiffly posed on the shore, or of children squatting awkwardly in front of sand castles.

As mementoes of happy times spent near the sea, pictures of this type are undoubtedly interesting to members of the party who have assisted in their creation, but they generally lack that wider appeal which is the hall-mark of a good holiday photograph.

Now there is no reason why the amateur's snap album should be filled with prints that interest nobody outside the family circle. One

The Surf Boat. 1/100th sec. exposure at f/11.

of the best ways of making our beach snapshots infinitely more interesting both to ourselves and to others who chance to see them is by photographing figures actively employed. And, at this time of the year, there is no better place for taking such photographs than on the shore at our holiday resorts. The light is at its best and the assistance of suitable models is easily obtainable.

It may be argued that the photography of rapidly-moving figures is beyond the scope of the popular-priced camera, such as the majority of amateurs use during the summer vacation. This is true only in special circumstances, and as these notes are being written with a view to helping those whose equipment consists of a humble box camera, it will be shown how they may successfully cope with subjects in which there is considerable motion.

Frolics on the Beach. 1/50th sec. exposure.

Pictures of seagulls in flight and of objects moving rapidly along a line at right angles to the axis of the lens should not be attempted, for these are subjects demanding the use of a large-aperture lens and a very high shutter speed.

Fortunately, there are many other action pictures which may be secured with the modest instrument if certain instructions are faithfully followed. The gentler actions incidental to a picnic on the sands, such as the passing round of the sandwich plate or of filling the teacups, present no difficulty, but when more ambitious

The snapshot that everyone takes. 1/25th sec. at f/11.

July 18th, 1934

In this article the owner of an ordinary snapshot camera is told how to secure rapidly-moving subjects without blurred results.

subjects are attempted certain rules must be observed.

Games of leap-frog, skipping and racing require an abundance of light for their successful portrayal, and should therefore be tackled only in the middle hours of the day and when the sun is shining directly on the subject. The largest stop of the lens must be used and also the briefest shutter speed available—say 1/100th second.

Regarding the subject itself, it may be said that "blur" can only be avoided when the motion of the image on the film is at a minimum, and that this condition is best secured when the

Skipping pictures can be taken with an ordinary camera and shutter, if the right moment is chosen for the exposure; in this case 1/100th sec.

moving figure is either approaching the camera or receding from it along a line parallel with the lens axis. And the nearer this line is to the lens axis the better.

In the case of leap-frog, high jumping, etc., the exposure must be made when the figure is at its highest point above the ground, for it is then that the image on the film is almost stationary, and can therefore be recorded successfully even with a comparatively slow shutter speed.

It is advisable to use a direct-vision view-finder. The figure must, of course, be in focus when the shutter is released, a condition easily fulfilled if the exposure is made when the moving object is just over a previously selected spot on the ground, and if the scale is set for the necessary distance.

That failures will attend some of our efforts is certain, but a few really successful pictures should be the result of a day's work on the sands. Besides, the photography of figures in action is a much more exciting pastime than the haphazard snapping of inert family groups.

Leap-frog.

The Medicine Ball.

Action subjects of this type can be taken without a high-speed shutter, if the highest point of arrested movement is watched for.

Deck games.

A FEW years ago the idea of a cruising holiday conjured up visions of wealth and unlimited leisure, but to-day anyone with a modest purse and a fortnight's holiday can enjoy the amenities of a liner, and the wonderful sights when touching at foreign ports.

How jolly life is on board ship. Our new-found friends indulge in the numerous and pleasant deck games. Deck tennis, shuffle-board, peg-ring and bathing provide opportunities to carry off the tournament prizes as souvenirs of a happy voyage. Dancing on deck in the moonlight is the general occupation of

Unloading. Las Palmas.

Photography on a CRUISE

By F. A. SHUTT.

the evenings, with a fancy dress ball as the star attraction. For those who prefer a good game, there is the mock race meeting held in the ship's lounge.

How charming these voyages are. All around are the sights and sounds of warm lands, the tang of the sea and the endless sunshine. The fun on board is worth the voyage, but cannot be compared to the first thrill of sighting foreign lands.

On most cruises trips to the various places of interest are organised at each port of call, and at these points the photographer should be ready for eventualities with plenty of "ammunition." It is impossible to foresee what subjects will crop up, and this is part of the fun.

A Popular Cruise.

A trip to Portugal and the Canary Islands provides an abundance of opportunity for those who are interested in either people or scenery, and when one is not basking in the sunshine there are some most fascinating places to visit.

As the ship approaches Lisbon the scenic beauty is so remarkably fresh that one's finger itches to release the camera shutter. The wise man bides his time, and selects suitable opportunities. Here and there the ruins of a Moorish Fort can be seen, and farther back on the hillside the golden dome of the Pena Palace at Cintra glints in the early morning sunshine. Lisbon, as viewed from the sea, is an entrancing sight, and looks almost like Torquay, except that the houses are white or blue, with roofs of a glowing red.

Madeira can be described as a jewel surrounded by the clearest sea it is possible to imagine, in which can be seen the flickering fish in the depths below. The sea provides the native boys with an opportunity to display their diving capabilities.

In Las Palmas, the chief industry appears to be the selling of shawls, embroidered table linen and other oddments. A trip to "Monte," the favourite summer resort of the residents, is imperative, and Atalaya, the home of the cave-dwellers, offers fine possibilities to the owner of a camera.

After taking endless snapshots we say good-bye to these wonderful and enchanting islands, their flowers and sunshine, their blue waters and their smiling brown people; the ship swings round, and our course is set for home. The last happy hours are spent in lazing in the sunshine or taking part in the numerous tournaments, and so the cruise ends; but we have still our photographic album to revive the happy

The Bos'n.

memories of an interesting and unique experience.

Apart from the opportunity that a cruise offers for securing pictorial photographs of foreign places that might not otherwise be visited, the snapshots of a more personal character taken on the ship itself will probably provide as much interest at a later period as the pictures taken on shore. They are subjects also that can be successfully undertaken with practically any type of hand camera from the cheapest to the most expensive. On most of the cruising ships supplies of materials and a dark-room are always available.

By NORMAN CRAWSHAW.

Camera & Canoe

By T. D. TROUNCER.

ANYONE who has spent his holiday touring in a canoe will never want to try any other way of doing so again. The vogue has spread from Germany, where it has been very popular for some time, and many people in England have now taken it up. The keen photographer will find that it is ideal.

There are certain practical considerations, however, which it is essential to bear in mind if the holiday is to be a success from the photographic point of view.

First, the choice of apparatus and materials. The less these weigh and the less space they take up the better. The modern miniature camera is the ideal instrument for the purpose.

It is advisable also to take the following accessories: leather case, exposure meter, lens hood and filter. The leather case is essential to protect the camera from being splashed by water and from the rough usage it is likely to have.

The film used should be of the orthochromatic or panchromatic variety. It is often forgotten that a filter is of no use unless one of these types of film is used in conjunction with it. Panchromatic film is probably best, as its sensitiveness to the reds as well as the greens enables it to record the beautiful sunset effects seen by the riverside.

It is better to buy sufficient film for the whole holiday before starting on it, as there is nothing more annoying than being caught short of film and having to chase around to find the type of film that

you are used to. Those miniature cameras which take thirty-six pictures on a single spool are very useful in this respect.

Finally comes the choice of subject,

canoe there should always be some foreground interest, or the resulting photograph will show a vast expanse of water and little else.

If camping by the side of the river, a splendid series of pictures can be taken. The best results will be obtained if the other members of the party are shown busied about their appointed tasks. The best time of day to choose is the early morning or the evening, when the shadows are longer and the light softer. In the summer there is

At Sutton Courtenay.

Over the Falls.

Lunch time.

plenty of light at these times.

Exposure should present no difficulties, especially if a meter is taken. It will be found that it is approximately the same by the water using a filter as elsewhere without one. But beware of the beautiful, cool, shady places by the bank where shelter is taken from the storm or a halt made for a meal. A short time exposure may

and this is where the delights of canoe touring for the keen photographer become apparent, as the scene is constantly changing while he paddles downstream from place to place. His only difficulty is the selection of the best from a mass of rich material. When photographing from the

well be necessary for these, and if a tripod has not been taken, the difficulty can probably be surmounted by resting the camera against a tree or on some temporary support. The greater difficulty of taking such pictures will enhance their value if successful.

Finally, remember that all the trouble taken will be of no avail if the exposed films are not carefully preserved until development. They will suffer constant packing and unpacking, and nothing can be more maddening than to spoil the record of a perfect holiday for want of a little attention.

Snapshots on the

By H. F. TAYLOR.

As the boats come in. 1/100th sec., f/8, Panatomic film.

THE seaside photographer, having exhausted somewhat the possibilities of the swimming-pool and the beach, will find some refreshing photography on the fish quay, if there is one in the neighbourhood of the resort chosen for the holidays. Many of the well-known centres for holiday-making around our coast will provide this subject in one form or another, and it is an ideal one for the camera.

Most of the work involves early rising, but what is that to the keen amateur? It may also involve a corresponding difficulty with exposures at an early hour, but in turn offers unique possibilities to the picture-maker, with the sun low and the rather unusual lighting.

In some of the smaller ports, the state of the tide determines when the catch shall be brought in, and if you are lucky you may find the market in full activity in mid-morning.

The type of vessel varies with the locality, but they will all make pictures, the big iron trawlers of the east coast, the small brown-sailed luggers of Devon, and the still smaller motor-driven smacks of Cornwall.

The fish are spread out on the quay, graded according to species and size, and the auctioneers and buyers move from place to place. It is somewhat difficult to compose pictures with so many figures in movement, and it is here that the miniature camera scores, both

Crab buyers. 1/10 th sec., f/5.6.

Landing the fish. 1/100th sec., f/5.6.

aperture with the short-focus miniature camera lens was sufficiently small to give good depth of focus.

Depth of focus is not always required, and in cases better pictures might be obtained by using a larger aperture and making the figures stand out by differential focussing. I may mention that I used Panatomic film, fast to yellow light and of remarkably fine grain, permitting of a high degree of enlargement.

After the sale of the fish come the cutting up and packing. With a hook in the

FISH QUAY

left hand and a knife in the right, the cutters move along the rows. The fish is lifted by the hook, and with a couple of deft blows the edible portions of the skate or ray are severed. The figure is comparatively still, but the arm moves quickly, and if the action is to be arrested the shutter speed must be at least $1/100$ th of a second.

"Don't forget the gulls" is rather unnecessary advice; it is almost impossible to avoid them. They

Cutting. $1/100$ th sec., $f/8$.

A poor catch at Looe. $1/25$ th sec., $f/4.5$, dull day.

scream and flutter around in hundreds, awaiting any little titbit of offal that may be thrown aside. In some places they are so impudent as to be almost a nuisance to the workers. Use the highest shutter speed possible for the birds, and make lots of exposures, for movement is so rapid that until development of the negative one hardly knows whether the picture will be a success or not.

While all this activity is going on, the fishermen,

having done their bit, may be sitting about their boats or doing odd jobs, and a general view of the boats on the quayside may make a good subject. A little patience here may be rewarded; small boats are continually moving about, and by waiting a few minutes one may just come into position so as to turn a mediocre picture into a nice composition.

As an alternative to the usual seaside work, this subject will be productive of many attractive pictures. No special apparatus is needed—the camera that the amateur is used to for other snapshots will serve equally well for the fish quay.

The whole business of disposing of the day's catch is finished in an incredibly short time, and with a parting shot at the net repairers, the photographer may go home to breakfast.

Resting after labour. $1/100$ th sec., $f/8$.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

SNAPSHOTS AFLOAT.

MOST of us who use a camera find ourselves, at times, "aboard the lugger," and there is always a certain novelty and excitement about photographing in such circumstances. In many ways it is different from snapshotting ashore.

The "lugger" may be anything from a row-boat to a liner. I have taken many photographs from a sea-going tug, in the lower reaches of the Thames and out into the North Sea; and even from ferry-boats plying across the Thames, the Mersey, and elsewhere. In a small boat there are special difficulties; the viewpoint is too low for many subjects; the nearer water included is too near; and in anything like a sea the movement of the boat is so excessive that it is difficult to stand steadily and safely, and horizon lines come out with impossible slopes. The lower or the upper deck of a passenger steamer is better; the upper deck for preference, as there are less likely to be awkward obstructions.

A river trip often provides a good harvest. I could show, for example, a series of shots giving, in the mass, a capital panoramic rendering of the banks of the Rhine

from Bonn to Mayence; the Moselle is, I think, even better; and the Seine, from its mouth to Rouen, yields much of interest and beauty. Even some of our own smaller streams, like the Dart and the Fal, are full of charm.

In wide estuaries, and out at sea, possible subjects present themselves at longer intervals. Here much depends on sky effects. A cloudless sky, when we are on the water, is a misfortune from the photographic point of view. We have to depend a good deal on sheer luck for the chance of coming within shooting distance of interesting craft—fishing-boats, yachts, liners, fine Thames barges, and the all too rare joy of a "windjammer." It is not only a question of distance, but of lighting and viewpoint.

On the water, distances are deceptive. We are very liable to under-estimate distance, and to exaggerate size. The view-finder would help us if we allowed it to have its own way, but we mentally disbelieve it; and we find afterwards that the passing vessel, which we know to be so large, and which the finder insisted was so small, appears in the negative more insignificant than we were prepared to believe. We have to resort to abnormal enlargement to make anything of it at all. Very often, though, it is wise to rely on this subsequent enlargement rather than miss a good thing.

Instead of drawing on a miscellaneous collection of "afloat" subjects I have chosen half a dozen simple ones from about three times the number taken on a single trip from Portsmouth to Southampton and back. They are all the sort of thing that the beginner can pick up with the simplest of cameras.

At the very start I got the submarine shown in Fig. 1. Nothing much, but effective as a record lantern slide, or as an item in a series of illustrations of types of craft. Later on I

ENSGN SELFIX "20"

Lift the foot to unlock—pull the base down—snap it into place, and the camera is ready for work. That is the story of the Ensign Selfix "20"—the smallest camera taking standard size $2\frac{1}{4} \times 3\frac{1}{4}$ films.

Features:

Compact carrying handle. Improved self-erector system. Bellows specially designed to stand up to the rapid erector action. Reflex view-finders on all models, with additional direct-vision view-finder and film registering device on the f/6.3 and f/4.5 models. For easy loading the back is hinged so that it opens like a book. Trichro shutter giving speeds of 1/25, 1/50, 1/100 second, Time and Bulb.

DALLMEYER LENSES AND ACCESSORIES

ADON adjustable type Telephoto Lens. A variable-focus lens, complete in itself, for use on all size cameras employing a focussing screen. Ideal for architecture, landscapes, natural history work, etc. Price, in micro-focussing mount, £7 0 0

WIDE-ANGLE ANASTIGMAT, f/6.5 for focussing, f/11 for taking. Angle approx. 100°. The field is exceptionally flat, and definition critical to the corners. Made in focal lengths from 2½ in. to 9 in. Prices from £5 5 0.

ENLARGING ANASTIGMATS. Two series are made, with apertures of f/4 and f/4.5. Designed for use with horizontal and vertical enlargers, employing half-watt lighting. The f/4 series are provided with orange cap and patent clicking iris. Made in focal lengths from 3 in. to 8½ in. Prices from £3 0 0.

DALLMEYER COLOUR FILTERS. Made in 3 densities, ×2, ×3, and ×4, of optical glass of good quality as regards homogeneity. Surfaces optically polished and mounted in screw-in cells. Diameters from ¾ in. to 5½ in. Prices from 10/-.

got two or three shots, under a cloudy sky, of a race between *Endeavour* and *Velsheda*. These and several others are very good, but do not lend themselves to reproduction on a small scale. This applies particularly to the best shot of the day—a picture of a graceful yacht almost becalmed, and only to be rendered as a delicate high-key subject.

The yacht under slight sail, shown twice in Fig. 1, I took three times—once when overhauling it, as in the upright print; once when abreast of the bows; and again after passing it. The version showing the bows also includes a distant view of Netley Hospital, very clear and sharp in the original.

On an art page is a sort of holiday record of part of the crowd in the bows of the steamer, admiring *Astra* as she passed leisurely by—a thing of beauty to which no monochrome rendering can do full justice.

Fig. 2 shows a couple of liners. The upper one is the *Arundel Castle*, in mauve and white, with tugs standing by ready to haul her out. The lower one is the *Berengaria*, with her long black hull, only faintly suggesting her 52,000 tons, and beginning to look old-fashioned. I also got a record of the snowy majesty of the *Mauretania* and the *Empress of Britain*—not a bad bag for a single afternoon.

All these photographs, and all the others I took on the same short holiday—including some Winchester interiors—were made with a $3\frac{1}{2} \times 2\frac{1}{2}$ folding camera, with a Zeiss f/4.5 lens, and on Verichrome film packs. For many exposures I used a yellow filter, or I could not have done much with white sails against a blue sky, and still less with the light clouds that appear quite naturally in some of the prints.

The light is so strong in such circumstances that it is quite safe to use a filter which about doubles the exposure time. It makes a great difference even on ordinary film. Still more difference would be made by a deeper filter with ultra-rapid panchromatic film, but I doubt if the beginner would be wise in going as far as this unless he has gained experience by previous experiments.

As to shutter speed I would suggest one-hundredth

Fig. 2.

of a second if it can possibly be given. Movement may be very rapid, especially when vessels are passing in opposite directions at close quarters. There is also the vibration from the engines, and the difficulty of standing quite steady when making an exposure. Many shots, too, have to be literally of the "snap" kind, and very often the most rapid action is necessary if a subject is not to be lost altogether. W. L. F. W.

How I make my EXHIBITION PICTURES

No.
CCXXXVIII

Mr. G.
CROSBY.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"I PHOTOGRAPH everything that looks worth trying. This means, of course, that a good many attempts turn out failures, while some of them (where circumstances permit) have to be retaken two or three times before the result is worth looking at; but I consider it always worth while having a shot at what seems to offer possibilities. When in doubt, I take it!

"If I tend to specialise it is in night photography, mountains with cloud, and close-up (table-top) work, treated where possible in what is designated the 'Modernist'

personal there is little justification for it at all. My photographs are, of course, produced primarily to please myself; if, however, they please other people (including exhibition selectors and competition editors) so much the better. All the pictures, at any rate, are intended to conform more or less to the accepted basic standards of design and composition.

"I do not attempt consciously to achieve results that are 'beautiful,' whereas ornamentation and prettiness I most definitely avoid—in all things. What I aim at is strength in design, and a certain definite interest (human or 'inhuman'; concrete or abstract).

"The camera is a quarter-plate 'Speed Cameo,' with Ross f/4.5, double extension, and direct-vision wire finder, the outdoor exposures being made nearly always from eye-level. The subjects are roughly 'squared-up' in the frame, allowing where possible a margin for safety, and the final composition adjusted when enlarging. Quick unfixed contact prints are a great help in deciding what's wanted and what's not.

"For indoor work I prefer Soft-gradation pan-chromatic plates; outdoors I use (for convenience) orthochromatic pack film, usually with sky filter pushed well down. Development is by inspection for ortho; by time and temperature for pan-chromatic; the time being varied according to the nature of the subject. 'Plucky' negatives are preferred.

"Enlargements are vertically projected upon Kodak Royal, cream base, amidol developed. Dry-mounting always—with flat-iron.

"I am no 'purist': I put as much auxiliary and after-work into the prints as I find necessary (or possible), spotting and toning-down here and there with oil pigment (always); shading and spot-lighting while printing (usually); combination printing of clouds, etc. (frequently). Occasionally,

in cases where a good deal of hand-work appears to be necessary, I make a 12 by 10 in. paper negative and have a thoroughly good time.

"'Man looks into Space' is, I regret to say, a combination print, the clouds being on a separate negative. The 'regret' is quite genuine; I would far rather have got the whole thing in one go, but you can't keep a mountaineering party waiting until the right clouds roll up into the right position—particularly if the party doesn't know it is being photographed. The clouds, however, were taken soon afterwards, and specifically for the picture (although this does not necessarily mean that they won't be used elsewhere later on)."

SENTINEL.

G. Crosby.

style, i.e., with strong lighting, acute perspective, plenty of three-dimensional depth, and ruthless trimming of non-essentials. Pastoral subjects do not appeal to me, nor do delicate or high-key effects. Straight lines I find more interesting than curves; stone and metal more attractive (photographically) than vegetation.

"All my enlargements go up on the South Essex Club screen for criticism (which they most certainly get), and the comments received are decidedly helpful, as are also the study and attempted 'pulling to pieces' of other members' prints. Nevertheless, I try not to be unduly influenced by the suggestions made regarding my choice of subject and treatment, as unless one's work is truly

Summer Landscapes

THE above illustration is intended as a hint that this is a first-rate time of year for getting pictures of the countryside. It was not taken under ideal conditions, being in fact a snapshot from the top of a motor-bus just pulling up at this particular spot. Its main attraction lies in the sky—typical of the sort of thing often seen towards the end of a showery or stormy day.

At the Royal Photographic Society's rooms there is on view during the present month a collection of prints by an early worker at photography—Roger Fenton. These prints are made on albumen paper from 15 × 12 in. wet-plate negatives. All the upper corners are rounded to hide the dark patches where the lens did not cover the plate, and there is not a single good sky in the whole collection. Most of the skies are blank paper.

To-day we can photograph a landscape with the simplest of cameras, and the negative will be covered

perfectly, even at apertures that were unknown to the early workers; and if there are strongly marked clouds they will appear more or less satisfactorily in the print if we choose a paper to suit the negative.

But we can improve on this. We can render the sky much better by using a filter on the lens, and we can get truer colour values everywhere, especially if we resort to panchromatic plates or films.

We do not work, in the ordinary way, from moving vehicles. We want time to examine our subject, and to make the best arrangement of it; and then we shall probably have to wait till the sky is at its best before we actually expose. The best course is to expose fully enough for the landscape itself, and then to be on our guard when developing, so as to stop as soon as the landscape detail is out. This will avoid getting the sky too dense. The above print is a perfectly straight one on normal bromide paper.

L. F.

A Japanese umbrella is a useful accessory for silhouette snapshots.

HERE is a subject that every amateur photographer can attempt at the seaside. It is the only one in which under-exposure counts as a virtue, and can be turned to good account. In all other phases of snapshot work, the problem for the beginner,

in particular, is to secure correct exposure.

To obtain good silhouettes in the brilliant sunlight at the seaside, the shutter of the camera must be driven at its fastest, and generally the smallest stop can be used. Under-exposure is essential if clean-cut black silhouettes are wanted. Any clouds that are about will also be secured. Films are better than plates.

Endless subjects are available, and, as the illustrations on this page indicate, they should be chosen for their attractive outlines. Unless the shutter

works
attempt
jumpin
where t
the ran
a nove

SEASIDE SILH

If the right moment is watched for, when the ball is at its highest point, this subject can be taken with an exposure of 1/100th sec.

Horses make good silhouettes, as these two snapshots indicate.

For sunset silhouettes such as the picture below, a longer exposure should be given, or a larger stop used.

at high speed, it is of course useless to rapidly-moving objects, similar to the figures shown herewith; but for others, where there is little or no movement, they are within the range of even the cheapest camera, and provide a range from the usual snapshots.

OUETTES

A novel viewpoint.

THE amateur photographer who spends his—or her—holiday awheel is assured of a host of opportunities for picture-making. The leisurely speed of the cyclist enables him to secure with his camera many gems that the ordinary tourist would pass unnoticed, and he can reach and photograph remote beauty-spots that would be inaccessible to other wheeled traffic. Travel costs him practically nothing.

The sunlit village street.

Holidays Awheel with a Camera

Picture - making by the Cyclist - Photographer.

By N. B. DENMAN.

The photographer has three ways of spending a cycling holiday: by daily rides from home, by daily rides from a distant centre, or by a tour.

The first plan will appeal to him if he has only recently combined photography and cycling, and therefore has not exhausted the pictorial possibilities of his own district. The dark-room and all his apparatus are near at hand; developing and printing can be carried out immediately if desired; and

Evening light.

subjects can be revisited in event of failure, or to obtain better lighting or other conditions.

Similar advantages fall to the camera cyclist who selects a promising district and explores it from one centre; for the photographer who specialises this is the ideal holiday.

But variety is sought by most of us, and in this case a cycle tour should be selected, for constant travel introduces a wider range of subjects than any other type of holiday. Furthermore, the cyclist is not then restricted as to destination, being left free to regulate his daily mileage.

The type of camera to use and how to carry it when cycling will have been settled from week-end experience, and previous advice in *The Amateur Photographer*. Films are much more convenient for touring than plates.

In addition to the usual holiday subjects the cyclist-photographer should endeavour to record the many interesting and often humorous incidents that arise, aiming at photographs with a definite *motif* rather than those in which cyclists are introduced merely to provide human interest.

PICTURES of the WEEK

Some Critical Comments

on the Beginners' prints reproduced on the opposite page.

ALTHOUGH a very nice degree of judgment seems to have been exercised in arranging for the boat to be included without any cutting off—despite the small margin available—the drawbacks associated with a viewpoint that is too near are patent in No. 1 of the prints reproduced on the opposite page, "The Ferry," by W. M. Kerr.

Subject and Setting.

With the subject taking up so much of the space, the setting seems inadequate, and the picture conveys the impression of being overcrowded. Actually it is not so much overcrowded as including its subject on too large a scale, for the material, except for the number of figures in the boat, could scarcely be reduced. The only practical way in which the defect could be corrected is the choice of a more distant viewpoint, and, while it is realised that chance is a predominating factor where moving objects are concerned, the period of waiting for the boat to come into position might have been employed in the selection of a standpoint sufficiently distant to give a greater proportion to the setting.

Presumably, such a procedure would not involve any undesirable inclusions in view of the fact that the setting consists solely of water, but, if it would, the suggested rearrangement would scarcely be practicable, and there would, apparently, be no alternative to the existing lay-out.

There is no doubt, however, despite the good features now exhibited, that the revision would afford a not inconsiderable improvement, and, as the subject—or something of very similar character—is likely to be encountered by many of us during the forthcoming holiday season, the point regarding the relative proportions of subject and setting is emphasised and should be kept in mind.

Relative Proportions.

With No. 5, "Cornish Fishing Village," by L. A. G. Friend, there is something of a similar suggestion, though not by any means so pronounced, arising from the scale in which the fishing boats are shown.

The angle at which they are seen

and their relation to the setting is excellent, but their scale makes them seem just a bit over-emphatic, and, if it were possible for a viewpoint a little farther off to be adopted, it would be as well if it were chosen.

It is the foreground, more particularly, that should be lengthened, and if three-eighths of an inch were added to it, the whole thing would make up better. The addition of a quarter of an inch to the right-hand side would also aid matters appreciably, and, while by no means essential, a somewhat slighter extension on the opposite side would do no harm. On the other hand, it may be that the negative already includes these extra elements, and, if so, they might be included in another print; but, however obtained, the additional proportion allocated to the setting would afford a better composition and would also give a greater prominence to the reflections.

These latter are a feature that can be exploited almost without limit, and in the harbour in question—the place is Polperro—they often attain a brilliance and variety that few other places can excel, particularly at the turn of high tide.

Sunlight and Reflections.

To some extent this may be attributable to the fact that the harbour is almost surrounded by cottages and buildings of very different tones and textures and presenting all sorts of angles to the line of sight. That it is also well protected from the wind and is almost totally enclosed are also factors which play their part, and, given sunshine, the possibilities for picture-making are well-nigh limitless.

Another small seaport, in which opportunities are not inconsiderable, is Staithes, which is not far from Whitby on the Yorkshire coast. An illustration of the kind of thing that can be obtained is to be seen in No. 3, "Staithes," by John Taylor, which, if it has not quite the same attraction as No. 5, yet has its points, and, at any rate, does not exhibit the same tendency towards over-emphasis.

The latter scores, mainly, on account of its exclusion of the sky, which, in the former, is baldheaded and blank. The water, consequently, cannot show

the same variety, for it can only reflect what is actually there. With a suitable degree of tone in the sky, the rendering of the subject would be improved, but, from the standpoint adopted, it would be scarcely possible to secure reflections of equal interest.

Seasonable Scenes.

The arrangement of the composition, as far as line and mass are concerned, conveys a favourable impression, and these subjects give some idea of what may be attempted and obtained during the present summer holiday season.

No. 2, "Barge Comin'," by L. H. Oakley, illustrates the sort of thing that can be treated in the neighbourhood of a canal or stream, but, here again, the sky proved rather a drawback, to say nothing of the obvious departure from truth of the vertical lines. The same fault is to be seen in No. 4, "Summer Afternoon," by S. Baker, and the nature of the subject, broken up as it is into so many small masses, causes the arrangement to seem incomplete and chaotic.

It is doubtful if anything could be done to pull it together, that is, without a vital revision of lighting, viewpoint, and subject material, and this would mean making a different thing altogether. The figure, nevertheless, is appropriate enough and stands out quite well, having regard to the character of the setting, but, while he has been well caught, this in itself is scarcely sufficient to make a picture.

Vital Interest.

In a different setting, such a figure might provide just that touch of vital interest that gives a real pictorial feeling; and, in a somewhat similar way, No. 6, "Flowing Tide," by H. Bailes, appears to fail in its intention, primarily because the breaking wave does not seem to be shown just at that moment when its force is at its greatest, but when it is almost spent.

If it did happen to display the wave at the moment of breaking, and when the splash of its foam were at its highest, the impression would be entirely different, but, unfortunately, the chance has been missed, and the picture does not succeed in reaching the standard of achievement it might.

"MENTOR."

OUR ILLUSTRATIONS

Some Notes on the Pictures reproduced in this issue.

THIS study in "BLACK AND WHITE," by the Swedish artist, JAN DE MEYERE, occasioned considerable favourable comment at last year's London Salon of Photography, partly on account of its strong

contrast of tone, and partly because of its delicacy of key, the welding together of the two almost incompatible elements producing an unusual effect and one that was most intriguing.

The key, on the whole, is high, and except for the very strong notes of dark tone, scarcely goes deeper than the merest hint. The darks in question, therefore, tell with extraordinary force, and give an impression of vigour and strength that has seldom been hitherto attained.

Key and Contrast.

In the usual run of work in a high key, the deepest tone is but a medium grey, and it is very rare indeed to see a real dark included. The restriction of the tone values to the upper part of the scale is obtained, in the first place, by arranging for the subject to consist only of light tones and to be illuminated by a flat or frontal lighting, and, in the second, by cutting down the development time of the negative so that its contrasts are reduced to the desired degree.

Here, the same sort of lighting is employed, but there is the difference

that tones of considerable depth, if limited in area, are allowed in the subject material. Moreover, it would seem that development of the negative, instead of being curtailed, is permitted to proceed for the normal time, or, possibly, somewhat farther, the negative in question being printed upon a paper of a considerably long range. By this means, the subtle distinctions of the lighter tones would be retained and the darks would keep their strength without loss of gradation or quality. On the other hand, it is possible that a similar effect might be produced by developing the negative to less than normal contrast and the choice of a printing paper of a vigorous character or of a short range, though the former procedure seems to be the more probable.

At all events, the effect is particularly striking, and, while the contrasts are indubitably forceful, there is no suggestion of harshness, but, on the contrary, the impression the picture conveys is one of harmonious strength.

Turning to "A DRAMATIC MOMENT," by NORMAN CRAWSHAW, a very different arrangement of the chiaroscuro is presented. In place of strong contrast, the tones of the picture, viewed generally, are soft and more or less even, while they are, at the same time, appreciably deeper in the average than those in the picture previously discussed. Yet there is no tone quite so dark as the isolated elements of deep tone in the other, and the only light, which approaches anywhere near the former's key, is that on the child in the foreground towards the centre (1).

The subject tones, nevertheless, present an equal suggestion of harmony, but the strength is lacking. It would, however, be somewhat inappropriate in view of the character of the subject, and any greater vigour would impair the existing feeling of harmony. There is a strong probability, also, that were the range at all extended there would not be the same distinction between the figure in light and those which form her setting, for the lighter tones therein would inevitably be brought nearer her key.

Isolation and Unity.

At present, she remains the only light item in an area of half-tone, but, if the lighter tones in the half-tone background were at all brighter, a

sense of competition would be introduced and her isolation imperilled.

It is her isolation that enables the dominance necessary for her position as chief item to be established. It is aided by her brilliance of tone and by her position in the picture space, which, as it falls across one of an intersection of thirds, is strong and forceful. With that dominance established, the unity of the whole follows as a corollary, particularly as the half-tone elsewhere prevents the introduction of any note of competition.

It might, perhaps, not be wise to inquire too closely into the methods by which the figure in question has been brought into such prominence, but it may be mentioned that it could scarcely be carried farther without inviting a suspicion of unnaturalness; but, in other respects, the work is sound and interesting. With so many figures, it is remarkable how few exhibit a knowledge of the presence of the camera, and, as far as the bulk are concerned, they are

shown intent upon the performance, a state of affairs that indicates an excellent judgment for the time of exposure and a not inconsiderable achievement.

These difficulties, to a large extent, are eliminated when a single figure comes to be dealt with, such as is shown in "THE SHRIMP," by W. A. APPLETON, but, in consequence, a higher standard is expected. That it is attained, as far as camera consciousness is concerned, is apparent from a

July 18th, 1934

glance, and the figure, as may be seen, is exceptionally well caught.

The pose is very graceful, and, with the exception of just one feature, is well displayed against the setting. That feature is the hat. It is quite a minor detail, yet it could be wished that its brightness, just at the brim, came against a tone a shade or so darker, whereas what has actually happened is that the tones of background and brim are practically the same.

An Intractable Setting.

It is rather apparent that the setting is somewhat too forceful for the figure it is supposed to display. Its tones are too diverse and there should not be quite so much contrast. But that is how it was, and, as the pose of the figure is the most important thing, the amenability of the setting must, of necessity, take a secondary place. It either had to be taken as it happened or left entirely, for, if any attempt were made to show the figure against a different background, the probability is that her attention would be attracted and the subject spoil by camera consciousness.

Though the dark of the rocks in the distance is also too assertive, the

same objection does not lie, for it helps to show off the top of the hat;

but, if the tone of the rocks were lighter and the sands on the near side darker, the effect, as a whole, would be preferable. The top of the hat would still be noticeably the lighter, but the brim below would come against a tone a shade or so deeper, and would not be so entirely lost.

In the lower portion, the arrangement and tone of the background is about right, the figure being lost and found against it to an acceptable degree. The upper part might be improved by judicious after-treatment, the tone of the rocks being lightened by the application of one of the appropriate dyes to the negative, and the tone of the nearer shore being darkened by oil reinforcement.

The work would have to be carefully done so that it did not become apparent, but the improvement that would accrue would justify the trouble. The subject is very promising and worth the effort, and, moreover, provides another instance of the type of subject that may be essayed during the present holiday and summer season. "MENTOR."

"NOT SO SURE ABOUT IT."

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

A Film of Yachting By SIGURD MOIR.

Visitors to seaside and other resorts are now well catered for in the matter of picturesque yachting fixtures. The following article shows how the subject can form the basis for a pleasing film—individually treated and complete in itself.

DURING the coming months, yacht racing and regatta events will be scheduled with fair regularity in the tables of "Action Subjects for the Amateur Cinematographer." Happily, the season for these events coincides with the annual exodus to seaside places—so that it should be no difficult matter for the practical enthusiast to select a convenient local fixture and to return with sufficient material to assemble into at least one film of this particularly colourful subject.

Yachting is indeed an ideal subject for the action-loving cinematographer. To begin with, its highly-charged action is of a kind most easily understood by non-appreciative audiences. Then the subject is pictorial in the extreme; and this pictorialism can be incorporated with great success as an aid to cinematic composition.

Treatment.

Full satisfaction is hardly to be achieved through casually filming a number of attractive shots without any preparatory treatment or *planning*. Best results can be obtained only by properly ordering the scenes and sequences first on paper. The matter is not nearly so difficult as it may perhaps appear; and, in any case, it represents the only way in which a comprehensive, thoughtful plan can be prepared.

If no previous knowledge of the subject be possessed, it is recommended that some few days be devoted to studying the manner in which the craft are handled and the somewhat arbitrary technique of racing. For the competitors themselves are not concerned with the fact that you are making a film. They are concerned only with taking advantage of every favourable sign that the elements hold out to them. Wind and tide may offer different though attractive advantages to the yachtsmen; and the art of "tacking" can be filmed without setting up confusion only if the cine-

matographer take extreme care to make his work expressive.

Of course, it has to be decided whether the film will be assembled as a documentary of the various types of racing craft or as a more ambitious abstract. Treatment of the former kind will probably attract the majority of serious amateurs, though—owing to the rich presence of chance shots about which the worker may have no actual foreknowledge—an exceedingly good abstract may be prepared around the subject by any cinematographer possessed of vision and imagination.

Shooting.

Actually, the orthodox arrangement of shots and sequences can be adhered to in any type of yachting film. Thus, the long shots of a given scene should come first (this by way

of introduction and to consolidate locational relationships); these should be followed by the medium shots; and, finally, the close-ups should be inserted to emphasise the "high spots" in greater detail.

Where the camera is fitted with a full or partial rewind, it is by no means a bad plan to soften the "cutting" by dissolving these introductory shots one into the other. The effect of this will be to create a calm, tranquil atmosphere—which is necessary to establish contrast with the later action sequences; however, this device must not be overworked, lest an opposite effect tends to nullify its force.

It is consistent with this plan of shooting to introduce the smaller craft into the earlier scenes and gradually to approach a climax centred about the larger, more impressive

When filming racing craft the inclusion of a yacht in the foreground adds variety to the subject and gives a greater sense of stereoscopic effect and action.

vessels. Motor (canvas-less) craft are not at all spectacular unless filmed with great skill. Here especially should the question of viewpoints be carefully considered—though it is understood that only a few alternatives will be available during the actual racing.

Care should also be taken to hold the camera dead level. In a beautiful cinematic essay recently shown in London, fine cutting and assembly were accompanied by some wretchedly tilted horizons. This sort of thing

is sufficient to spoil any film—for which reason young readers should pay careful heed to the plumb-line or spirit-level.

Other Notes.

Telephoto lenses are emphatically needed in the filming of those events restricted to the larger and more picturesque craft. These draw much more water than the tiny yachts, and there is a consequent necessity for them to race farther off the land. Occasionally, however, craft of quite

moderate size find it of some advantage to come close in to the shore, and in such cases very large images can be secured with ordinary lens equipment.

Films of holiday life on small pleasure-yachts require, of course, a special technique somewhat different from that adopted in dealing with the subject under discussion. However, quite pleasing results can be obtained in connection with such films; though the problem of securing them is matter for another story.

“Close-up” Technique

By
“ACTINOGRAPHER.”

THE advantages of the “close-up” are probably too well known to warrant any further explanation. They are obvious to the beginner immediately he has examined his first deliberate essay into their use. And the seasoned expert makes use of them because he knows that in no other way can he create certain particular atmospheres, and in no other way can he introduce those intimate glimpses which make all the difference between stage-play technique and the methods of cinematography.

It is possible, too, to displace the unsatisfactory long-shot with a number of special close-ups. Chaplin, who is an accomplished director as well as a polished comedian, once built up a cinema picture of a sleeping apartment by showing first a hot-water jug and shoes on the landing, then a half-open drawer containing a gentleman's collars—followed by the corner of a bedstead, a window (with a vista of chimney-pots

beyond), part of a sleeping-suit, and, finally, the equipment of a dressing-table. Since all these objects figured prominently in the subsequent actions, there is no doubt that this substitution of close-ups for a single long-shot was a master-stroke of direction.

Varieties of the Close-up.

The close-up can be further subdivided into three distinct types of shot. First there is the large close-up (sometimes called the great close-up or “large head”). Then there is the normal close-up, an example of which is shown in the accompanying illustration. The third variation of this shot is very frequently encountered, and is known universally as the semi-close-up.

All these shots vary only a little in the distance at which the subject is arranged from the lens; and any one of them can, of course, be secured at a number of different distances according to the focal lengths of the lenses in use.

Technically, however, the term “large close-up” implies that the subject is required to be rendered in greater detail than is possible with the normal close-up.

Ordinary Close-ups.

Ordinary close-ups are encountered most frequently of all. They form, in fact, the real “intimate” technique of cinematography. It was this shot, incidentally, which enabled the cinema to justify its existence as a means of expression apart from the theatre.

In the ordinary close-up, no part of the featured subject is cut off by the framing. It is, therefore, in this shot that most scope exists for pictorial composition. The fact that action is at a minimum in such cases ensures that good composition, once arranged, will not suffer immediate destruction through appreciable movement.

The semi-close-up is best described as a rather large type of medium shot. Occasionally, it is referred to as the “bust” shot, and this is probably more expressive of its nature than any other description would be.

Occurrence.

Close-ups may occur when it is desired to lay stress upon any particular object or objects in production sequence. They may also be used to introduce new characters and other features.

In the former case, where it is desired to stress any object, the object in question must first be introduced by means of a longer shot—say, a long-shot or a medium-shot (or both), the screen size of the object increasing with each different shot until the emphasising close-up is reached.

When introducing characters, however, it is permissible to commence with the close-up, provided the change to a medium or action shot is made by a continuity device (such as tracking the camera backwards). This is usually a difficult shot, because it involves simultaneously changing the distance-setting and aperture of the lens, filming the action and operating the tracking trolley or other moving base.

An alternative plan is to arrange for the character to turn and walk away from the camera.

A Beach “close-up.”

TOURING WITH CAR and CAMERA

By "FLEETWING."

THE motorist-photographer is in the fortunate position to relive his motoring holiday and bring back to his own home the happy memories of the countryside, quaint old villages, etc., when he looks through his album of photographs taken during the tour. During the next few months the highways and byways will be explored by thousands of motorists, and a motoring holiday without a camera to capture the joys of the open road, is like a fish without water. Cameras of all descriptions, from the humble but efficient box type to the elaborate instruments with lenses like saucers, are all capable of producing a record of your annual holiday.

It is unwise to take a new camera on tour, as operating an instrument with which you are unfamiliar will often lead to unsuccessful results. Likewise use your usual brand of films or plates and take enough to cover the whole of the tour. This prevents the annoying situation of running out of sensitive material at some small village where supplies are unobtainable.

Care of the camera during the tour is of the utmost importance. How often this delicate piece of mechanism is thrown into the car at the last minute and forgotten until some attractive scene presents itself, with the resulting negatives leaving much to be desired through neglect.

The car floor and pockets are not suitable places to carry the camera, and should be avoided. Small particles of dust or dirt have a nasty habit of entering the instrument and making their presence apparent on the negative by scratches and spots. Dust on the film rollers in the folding cameras cause the "tramline" effect often seen. The ideal place to carry the camera is in a small box made large enough to take the camera and case and lined with sorbo rubber sponges, which may be purchased cheaply at any of the sixpenny stores.

Carrying the Camera.

Modern cars, being well sprung, cause little vibration, but when touring the byways and rough side-roads, a certain amount of vibration is unavoidable, and the above method of carrying the apparatus can be relied upon. The writer has travelled 30,000 miles with a camera stored in the car as described above without having one single negative spoilt by dust caused by vibration.

Roof nets are also good places to avoid vibration, but attention must be given to the weight of the camera in relation to the strength of the net. It will repay the holiday-maker to carry the following in his kit: a strong tripod, exposure meter and a flashlight outfit. It is surprising how useful the latter will be found when

photographing in old buildings, etc.

Naturally, on the first day of the tour everybody is in high spirits, and very often one is tempted to expose an undue amount of film or plates. This should be avoided, remembering that there is plenty of time and subjects ahead.

Plate-Changing.

In the case of plate-users, hotel bedrooms can be easily converted into dark-rooms for the purpose of plate-changing. After dark, the slides can be emptied and refilled under the bedclothes, with the aid of an electric torch fitted with a ruby glass. These are obtainable at any good photographic dealer advertising in this paper.

Those motorist-photographers who prefer the open air and camp out may use their saloon car as a dark-room for plate-changing by hanging rugs and coats, etc., over the windscreen and windows and waiting until it is dark. By working on the floor in the rear of the car, and using the body as an additional shield, no harm will result and the plates can be changed in safety. Panchromatic material must, of course, be handled carefully. One word of warning. Do not leave your camera and films, etc., in the car when garaging, so that mischievous or inquisitive persons have access and ruin your films by opening the camera.

Subjects.

When on tour avoid hackneyed subjects, try to find new viewpoints, and, above all, avoid continuously taking groups of the party and so wasting film which would be of use in the future. The car itself can often be attractively placed in a scene and make a good picture. When visiting the seaside, beware of putting the camera on the sand. Sand will play havoc with the shutter and get into the most unsuspected places.

At the conclusion of the tour, the motorist-photographer who does his own developing and printing has still a few more happy hours finishing the results of his efforts. Only those who have experienced it can appreciate the thrill of seeing one's negatives coming up in the dish, and rushing out of the dark-room announcing a successful conclusion to the greatest of all holidays, touring with a car and camera.

In the Lake District.

SELOchrome the Extra Fast Roll Film
for Tone and Texture

ILFORD

LIMITED

ILFORD

LONDON

Photograph by Capt. A.E. Middleton, F.R.G.S., F.Z.S.

You take pictures on "PANATOMIC"

Look for the Blue and Black saw-tooth border on the familiar Kodak yellow carton.

So far as sheer beauty and brilliance of tone distinguish 'pictures' from 'snapshots,' "Panatomic" gives you a *picture* every time. Fine detail, subtle gradation, pearly high-lights, soft shadows — those characteristics that collectively make up 'quality' — are present in every "Panatomic" negative.

The name reminds you of the reason. "Panatomic" is a fully *Panchromatic* film of almost *Atomic*-fine grain (that makes it superb for enlargements). And it is fast: double-coated; anti-halation backed.

"Panatomic" has all the virtues. Use it for your finest work.

"PANATOMIC" FILM

A Kodak Product

Made in the popular roll-film sizes

KODAK LIMITED . KODAK HOUSE . KINGSWAY . LONDON . W.C.2

*Summer Roses.*

SOMEONE has said that "God gave us memory that we might have roses in December." The photographer who busies himself in the summer, whilst the gardens, fields and hedges are at their best, will also have flowers in the winter-time.

The picturing of gardens and flowers is a most attractive branch of amateur photography, and he who pursues it will rarely lack for a subject. To take really good photographs of gardens, however, certain points must be remembered, else the results will scarcely be what were visualised. All too easily a flower-bed may present a meaningless muddle of foliage!

As colour is lacking in a photograph, something else—light, shade, and arrangement—must replace it, and the early morning or the late afternoon offers the best light. Do not attempt too much. Unless the garden is laid out in a geometrical or very bold pattern, a general view rarely will be so convincing as the picture of a pretty or interesting detail. A border against a house, a doorway, seat or sundial, all lend themselves and add strength and purpose to the flowers surrounding them. And beware of the path! It has a nasty tendency to appear up the centre or horizontally across the picture, a tendency which must be curbed. By moving a little to the right or left a better arrangement can usually be found.

It is wise always to use a tripod or other firm rest for the camera, for an exposure of perhaps a tenth of a second or longer will be necessary to allow for stopping down the lens to obtain the necessary depth of focus.

The GARDEN in Summer-time

By A. CHAUNCEY.

In a flower-bed we obtain a very wide range of colour, and it must not be forgotten that unless panchromatic material is used, reds and yellows, despite their brightness to the eye, will photograph nearly black. I always use Kodak Panatomic film, and find it excellent for the subject, especially when developed in fine-grain developer. A green filter will further assure complete colour correction.

Wild flowers should not be neglected, for they make as lovely pictures as the aristocrats of the garden. But beware of the snare of colour when choosing your subjects! A tangled mass of red campion, brilliant as it may look in the hedge, will probably not appear so in your picture. The same rules apply: select a group of plants, or some special arrangement of them, lie down and photograph them against the sky, catch them standing on a wall or at the base of a gateway, and you will not be disappointed.

*Window Decoration.**Foxgloves.*

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

USING A TRIPOD.

SIR,—I was pleased to read (in "The A.P." of July 4th, 1934) Mr. Wastell's advocacy of the tripod. In these days of hand cameras and button-pressing it is very seldom that one comes across an amateur using any kind of stand.

Mr. Wastell's article referred, of course, to still photography, but its appearance coincided with a time at which I had viewed a number of amateur ciné films on the screen, and wondered whether the undoubted conveniences of clockwork-driven ciné cameras were all to the good. In the early days of amateur cinematography, when cameras were hand-turned, a tripod was a *sine qua non*, and, provided it was a reasonably good tripod, rock-steady pictures were the rule. To-day, probably ninety per cent of amateur ciné pictures betray the fact that the camera was held "in the hand."

Probably few amateurs, in the excitement of seeing a well-exposed moving picture of their own making, realise the great improvement brought about by a picture being rock-steady. Quite often it is the only difference between the amateur's efforts and the quality seen at public cinemas. (I write, of course, of the *projection* quality, and not necessarily of the subject matter.)

On page 14 of my book, "Motion Pictures with the Baby Ciné," I have made a plea for the use of a tripod *whenever possible*. Really perfect motion pictures are hardly possible without some sort of camera stand, and if the amateur finds the ordinary tripod too much trouble, then, at any rate, there can be no excuse for failing to use a unipod, which may be extended to reach the ground or, in its telescoped condition, may be inserted into a sling hung from the neck. I have recently adopted a Roth Unipod, and find that I get perfectly steady pictures with rather more freedom than a tripod affords.

Coming back to the question of still photography, a unipod cannot, of course, be used for all the purposes mentioned by Mr. Wastell, but it does enable some of the longer automatic shutter speeds to be used which would be hopeless if the camera were held in the hand.—Yours, etc., HAROLD B. ABBOTT.

UNEVEN ILLUMINATION.

SIR,—In reference to the reply to E. L. in the last issue of "The A.P.," *re* uneven illumination with a condenserless enlarger, I have found the following a satisfactory way of overcoming the difficulty.

Take a piece of clear glass of suitable size and put a blob of white oil paint in the centre; this will occupy only a small piece of the glass in the centre, but it must not be allowed to dry with a hard-line round the edge. It should be given a sort of vignette effect by means of a brush.

If this is placed near the source of light, the direct rays from the light to the middle of the negative will be considerably reduced, while the rays to the sides of the negative will be untouched, and illumination will be evened up.

The piece of glass on which the white paint is put must stretch from side to side of the lamp-house, as otherwise the edge of the glass will show, and it must be supported (on wire in my own case) near the source of light.—Yours, etc.,

H. WARWICK NEVILL.

CAMERA PRICES.

SIR,—I am renewing my discarded hobby of photography after a lapse of some eighteen years, and have been studying "The A.P." for the past four weeks with a view to buying an up-to-date outfit.

I have in mind a certain Continental reflex of the twin-lens type as being the most suitable camera for my requirements, but *not* at its price of £22 10s.

I notice several of this type advertised (all Continental), and I am wondering where are the British efforts in this direction?

Deduct the import duties, freight, etc., and the importers' commission, and it appears to me that a home manufacturer could produce such a camera to sell at £12 15s., and still show a good profit.

I, for one, am going to hold on with a modest £3 10s. model until I can obtain value for the price charged and (if possible) buy a British product.—Yours, etc., H. S. HENLEY.

DISPENSING WITH THE NUMBER WINDOW.

SIR,—In connection with the complaints at present appearing in your columns regarding the use of panchromatic film in roll-film adapters, I also have been troubled with fog through this cause. Last July I had a movable cover fitted, but this was only a partial cure. Next I tried green material in place of red in the window, when (as I might have expected) the figures failed to show at all against the red film-backing paper. Ultimately I removed this and fitted darker red material for the window, but this necessitates holding it so that the sun can shine in to read the figures, so that it defeats its own object and fog is still found. When on holiday last year, I was driven to guessing the amount wound, overwinding for safety, with considerable waste of film.

Personally, I see no reason why, with the collaboration of film manufacturers, the red windows should not be dispensed with altogether. Would it not be possible for the makers to punch a small hole in the film at the end of each picture-space, to engage in some mechanism in camera or roll-holder that would produce an audible sound when enough had been wound? Some device with a spring could surely be arranged so that the hole would engage a projection of some sort. This could draw along a rod carrying a coil spring, and at a pre-arranged point a cam arrangement could push the projection out of the hole again. In flying back to the original position with the pull of the spring, a click would result, or a bell could be rung, to indicate that sufficient film had been wound along.

My camera is a T.-P. $3\frac{1}{2} \times 2\frac{1}{2}$ reflex—this being for the information of any manufacturer who puts such a roll-holder on the market and wishes to present me with one in exchange for the idea.—Yours, etc., "OPTIMIST."

"SECRET MEDIUM."

SIR,—In answering the query under the above heading in "The A.P." of July 4th, I think that you will find that most of the pencils used for colouring prints are of a waxy nature, and the medium consists of a wax solvent and a fixative.

While special medium is sold for the purpose by Messrs. A. W. Faber, an excellent medium consists of one part artists' linseed oil, and one part petrol or benzol.—Yours, etc.,

H. H. GOODCHILD.

A STUDIO FOR FILMING.

SIR,—I was rather interested in an article, "Finding a Suitable Studio for Filming," by Patrick Le Roi, in your issue for 4th inst. I am sure he would be interested in our studio at the Brondesbury Ciné Society, 100, Chamberlayne Road, Kensal Rise, N.W.10.

We have two large rooms, about 33 ft. by 23 ft., two social rooms, a make-up room and central heating. One room we use for a projecting theatre, seating about seventy people comfortably. We have an entrance in the main road, and another at the back where large scenery up to 10 feet high can be brought in. Buses Nos. 6, 46, 52 and 231 stop outside the door, and the North London Railway Station, Kensal Rise, is adjoining, and parking place for cars is provided.

In our studio we have a glass roof which gives us an opportunity of shooting indoors in daylight at *f*/2.5; our lighting consists of five 500 incandescent, 16 Nitraphots, two 30-amp. arc lights, a bank of about twenty-five 100-watts, one 500 c.p. spotlight, and one 2 k.w. spotlight incandescent. The lighting was installed by Soho, Ltd., and Kandem Electrical, Ltd.

You will see from this description that the studio conforms with Mr. Le Roi's requirements. It is available for amateurs any evening save Tuesday and Friday, and, being an enthusiast myself, I should like to get into touch with people who are really keen.—Yours, etc., B. LUDIN.

July 18th, 1934

THE AMATEUR PHOTOGRAPHER
& CINEMATOGRAPHER

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Readers of *The Amateur Photographer* have not been slow in taking advantage of our Gift Offer of *Photograms of the Year*. The limited number of copies of this annual which were available were exhausted almost as soon as the seventh coupon appeared, and in cases where it has not been possible to send a copy the money is being returned. No further coupons will appear.

Readers who wish to be certain of securing a copy of the next edition of *Photograms of the Year*, at the published price, which will be issued in December next, are advised to place their orders either direct with the publishers of *The Amateur Photographer*, bookseller or dealer at the earliest possible date, in order to avoid disappointment.

In addition to the Exhibition of Prize Prints from *The Amateur Photographer* Competitions, now open at the house of the Royal Photographic Society, 35, Russell Square, W.C.1, a smaller but extremely interesting exhibition is also to be seen in Room 1, on the ground floor. This consists of a series of old prints by the late Roger Fenton, who was the Society's first secretary, a post he relinquished in order to proceed to the Crimea in 1854. The prints are in excellent preservation and are of considerable historical interest. Admission to the exhibition is free.

The outing of the Midlands Counties Photographic Federation was held on the 23rd June to the Brand and Woodhouse Eaves district. The societies represented were Birmingham, Walsall, Coventry, Rugby, Hinckley, Derby, Leicester, Nottingham and Loughborough. About seventy members attended and the outing was a great success. The arrangements were in the hands of Mr. J. O. Wilkes and Mr. T. H. Simpson, of the Loughborough Society.

Negotiations have been entered into for the exhibition of all South African prints exhibited in the South African Salon of Photography to be shown at South Africa House, London, after exhibition at Johannesburg. The South African Salon is being organised by the Johannesburg Photographic Society, and will be held at the City Hall, Johannesburg, from August 20th to 25th.

Gevaert, Ltd., of 115, Walmer Road, North Kensington, London, W.10, have just issued a new general catalogue of the well-known Gevaert specialties. Fifteen varieties of plates, nine varieties of films and nine varieties of papers (including the beautiful Gevaluxe Velours) are listed, with descriptions and prices. Particulars of ciné film and processing are also given. A copy of the booklet will be sent free on request to above address.

The Surrey Garden Village Trust, Ltd., are holding a Surrey Handicrafts Exhibition from October 16th to 20th, at Croydon. A photographic competition is being organised in connection with this exhibition and cash prizes will be awarded. Further particulars can be obtained from the Exhibition Office, Eldon House, Wellesley Road, Croydon.

The closing date for the Photographic Section of the Regent Exhibition has been extended to August 31st. The Exhibition, which will be held at Bush House, Aldwych, October 6th to 13th, is to illustrate "Advertising of to-day and to-morrow," and the photographs are to be representative of "Happiness." Prizes of ten guineas, five guineas, and five of one guinea are offered. Many "A.P." readers will be interested in this competition and exhibition, and should apply for booklet and full particulars to Mr. Philip Matthews, The Regent Advertising Club, 19, Buckingham Street, Adelphi, W.C.2.

A new book, entitled "Modern Miniature Cameras," by Robert M. Fanstone, has been published by Blackie & Son, Ltd., 50, Old Bailey, E.C.4. Mr. Fanstone is a frequent contributor to "The A.P.," and his book tells in simple, straightforward language what the photographer wants to know about modern miniature camera work—the various types, films, exposure, processing, enlarging, etc. It is a useful volume for the amateur to possess. The price is 3s. 6d.

The July "232" and "Sandom" Photographic Competition, the last of the series, closes at the end of the month, and readers who have not already entered should do so without delay. Substantial prizes are offered in Beginners' and Advanced Workers' Sections. There are no entry fees. Full particulars and Entry Forms are supplied free on application to "232" Photographic Competition, 38, Wood Street, London, E.C.2.

As from July 9th, the Camera Co. will be the name of the business hitherto trading as the Camera & Gramophone Co. The change of name is necessitated by the cessation of all gramophone business, and concentration solely upon photographic and ciné trade. The address of the Camera Co. will continue to be 320, Vauxhall Bridge Road, Victoria, S.W.1.

The Amateur Ciné Service ask us to announce that they have removed to larger premises at 52, Widmore Road, Bromley, Kent, to which all future communications should be addressed. They have, in their new showrooms, one of the largest dealer displays of ciné apparatus in the country.

EXHIBITIONS and COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, July 31. Rules in the issue of June 27. Lucerne International Salon.—July 7-29. Secretary, International Salon of Photography, Lucerne.

Derby P.S. Jubilee Exhibition.—July 21-August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15. Applications for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers, please copy.)

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Entries, July 28. Open, August 31-September 15. Further particulars from Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20-25. Entries close the last mail in July. Particulars and entry forms can be obtained from the Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Entries, August 1; open, August 24-September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Entries, August 24; open, September 24-30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan.—Last day for receiving prints in Tokyo, August 31. Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6; sending-in day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Cligny, Paris (9e).

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26-September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowderska 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; Exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; Entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr, 69, Antwerp, Belgium.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Stereoscopic Work.

Can you give me the name of a cheap book (about 2s. 6d.) dealing with stereoscopic photography? Most modern cameras are for 45×107 mm. plates; is it advisable to enlarge to standard size? Is it necessary to move the lenses for close-up subjects. G. M. G. (Bristol.)

We know of no handbook on stereoscopic photography now in print at anything like the price you name. A standard book on the subject is that by A. W. Judge, published at 15s. The fashion for 45×107 mm. plates has considerably died down, and there is a certain revival of the old standard-size stereoscopic plate. Whatever size picture is used, however, there is no need for enlargement, as the size of the images does not affect the realism in any way. It is strongly advisable, even if not absolutely necessary, to have variable distances between the lenses, which should be nearer together for close-up objects, and farther apart for very distant ones.

Drying Negatives.

What is the quickest way to dry plates and films? T. H. A. (Liverpool.)

There are various ways of hastening the drying of plates, one of which is to immerse them in successive baths of methylated spirit. This method, however, is not suitable for films. Another plan is to harden the negatives with formalin and then to dry them in a current of hot air. It is advisable to allow negatives to dry naturally except in cases of urgency.

Contrast and Detail.

Can you tell me the formula of the developer which most D. & P. services use? They usually produce very contrasty negatives with a great deal of detail. J. D. F. P. (Stowe.)

All sorts of developers are used by professional firms, although probably the most usual is some form of metol-hydroquinone. The question of contrast is not one dependent upon any particular

developer, but on the time of development. Detail is largely a matter of correct exposure. You should dismiss from your mind any idea that you can only get contrast and detail with some particular type of developer.

Reversing Negatives.

I have some negatives that I would like to put in a lantern and throw on a screen. How can I reverse these negatives so as to make them positive? L. A. (Leeds.)

Once a negative has been fixed there is no possible means by which the image can be converted into a positive. It is evident that the silver that would have been required to form a positive image has all been removed in the fixing bath. Your only course is to make lantern slides from the negatives—a comparatively simple process.

Speed Numbers.

Can you tell me the speed numbers of the under-mentioned films? E. W. N. (Steyning.)

We have frequently pointed out that we have no reliable information as to the speed numbers of the various films. With few exceptions these are not supplied by the makers, although we have never been able to understand the reason for this curious reticence.

Making Camera.

I wish to make a simple box camera for aerial work. Could I get a shutter working at 1/500th of a second combined with a lens at f/3.5? What focal length should be used for 3½×2½ plates? Is the socket into which the dark slide fits obtainable as a separate part? W. B. S. (Ipswich.)

If you want a shutter to work at the speed you name we should say that one of the focal-plane type would be the only suitable form. There are plenty of lenses available at the apertures you give, but there is considerable latitude as regards focal length. With any given series of lenses the size of the plate covered is always stated. What you call

the socket into which the dark slide fits is naturally part of the back of the camera itself, and you could not expect to obtain this single part separately to fit a home-made camera. If you can make the camera you can surely make the grooves for the slides to run in.

Reversal.

What has happened to the enclosed negative, and why? It was developed in a tank, and was on panchromatic film. K. J. S. (Newport.)

Your negative is partially reversed into a positive. The most likely cause is that the light used was not safe for panchromatic material. This would not matter as long as the film was fixed as well as developed in the tank, but if the film were taken out for fixing the trouble might easily arise. As you give no particulars on this point we cannot say whether this is the cause or not.

Miniature Reflex.

What, if any, are the advantages of a miniature reflex camera as against the ordinary direct-vision finder pattern? Does the speed at which the shutter is set affect the view on the ground glass? A. V. P. (Worthing.)

The advantage of the reflex camera is that you see the actual image of the subject as it will be projected on to the film or plate. This gives you an opportunity to study definition, which the direct-vision finder does not help with at all. We are quite at a loss to understand what you mean by the speed of the shutter affecting the view on the ground glass. This view is projected by the finder lens and not the working lens, and the shutter has nothing whatever to do with it.

While-you-Wait Photographs.

I am interested in that type of camera which takes and develops at short notice, and gives the finished photograph on what seems to me a tin plate. If the subject is not too trivial could you give me some information? T. L. (Glasgow.)

No photographic matter is too trivial for us to deal with, but the question of producing what are sometimes called "while-you-wait" photographs is hardly connected with amateur photography. A firm which specialises in apparatus and material for this kind of work is Messrs. Jonathan Fallowfield, Ltd., 61-62, Newman Street, Oxford Street, London, W.1.

Yellow Stain.

What is the cause of the yellow stain on the enclosed negative? It was developed in a Kodak tank with the powder developer supplied for the purpose? E. W. R. (Tunbridge Wells.)

There is nothing to complain about in the negative you send. The developer is a pyro one, and does not give clean black negatives, especially when the developing powders or the solution made therefrom are not fresh and new. We doubt whether you use an acid hypo bath for fixing, but if not we should recommend you to do so. If you make a print or enlargement from the negative we do not think you will have anything but praise for the result. A negative is not to look at, but to print from, and a "pretty" negative is often a disappointment when it comes to the real test.

GAYVERT ROLL FILM

SPEED

Gevaert Films give you just the extra margin that makes you **sure**—plus latitude which means that a little over-exposure makes little difference.

GAYVERT (Regular), 19° Scheiner : for all ordinary summer snapshot work.

SUPERCHROM (Express), 26° Scheiner : for speed subjects, difficult lighting, dull weather, and interior work.

Both varieties in all regular sizes, also spools for Mini-Fex Camera.

GEVAERT LIMITED
WALMER ROAD, LONDON, W. 10

The London Salon of Photography 1934.

SENDING-IN DAY, Wednesday, August 29th

THE TWENTY-FIFTH EXHIBITION
promoted by the Members of the London
Salon of Photography will be held at The
Galleries of the Royal Society of Painters in
Water Colours, 5a, Pall Mall East, London,
S.W.1, from SATURDAY, 8th September,
to 6th October, 1934.

CONDITIONS OF ENTRY.

No. 1. Pictures from exhibitors in the British Isles must not be framed; but may be mounted. Each picture must bear on the back, clearly written, (a) name of artist; (b) number and title of picture; corresponding to particulars on the Entry Form.

No. 2. When mounts are employed, they should conform to the following sizes—25×20, 20×16, or 15×12, but no mount to exceed 25×20; and it is suggested that white or light-toned mounts be employed wherever possible.

No. 3. Pictures from abroad must not be mounted (or framed), but should bear full particulars as above.

No. 4. Pictures which are sent unmounted will be suitably mounted by the Salon Committee, and all accepted pictures will be shown under glass.

No. 5. All pictures should be sent by parcels post, packed flat, and properly protected with stiff cardboard and adequate wrappings, addressed to: THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY, 5A, PALL MALL EAST, LONDON, S.W.1.

No. 6. The sending-in day is Wednesday, August 29th, 1934. All pictures for the Exhibition must arrive at the above address on or before this date. Exhibits may be delivered by hand at the Gallery on this date only.

No. 7. The Entry Form, properly filled in, must be sent with the pictures, together with entry and packing fee of 5/- (this fee covers any number of pictures from one exhibitor).

No. 8. To avoid Customs complications, all entries from without the United Kingdom must be sent by post and without prices marked on the prints. Packages containing such entries should be clearly labelled: "Photographs for Exhibition Only. No Commercial Value. To be Returned to Sender."

No. 9. All pictures sent by post will be repacked and returned, carriage paid, after the close of the Exhibition.

No. 10. In view of application being made from time to time to The London Salon of Photography for permission to reproduce pictures from the walls of the Gallery, exhibitors are asked kindly to signify on the Entry Form whether they have objection to such permission being given. The copyright, in all cases, remains the property of the authors of the prints.

No. 11. The Committee assure intending exhibitors that the utmost possible care will be taken of all work submitted, but they do not accept any responsibility for loss or damage, either during transit or at the Gallery.

The submission of pictures will be understood to imply acceptance of the above conditions.

Due notification of acceptance of pictures will be sent out as soon as possible.

All work submitted to the Selection Committee will be carefully and impartially considered, and no preference will be given to pictures by Members of the Salon.

Entry forms and further particulars from the Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.

Business Notices Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Rertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

Is He Pleased?

WELL—READ WHAT HE SAYS—

The NEW NORFOLK

THIS CUSTOMER SAYS:—

"I must tell you how delighted I am with the instrument, and think the value is really outstanding. I did not send for this camera until after trying and seeing other makes and until various lists, etc., when your advert. came out on Wednesday in 'The A.P.' I decided to send for one, and can assure you I am not disappointed."

R. D. H. (Yorks.)

From an actual photograph. Manufactured specially for the Sheffield Photo Co., Ltd., by Gebrüder Wign, Weisbaden.

3 1/2 x 2 1/4 Plate & Film Pack Camera
F/3.5 ZERANOR Anastigmat Lens (4 1/2-in. focus),
COMPUR delayed-action SHUTTER.

This is a precision instrument constructed of a light alloy, strong, out of very superior metal. Rising and cross front, both actuated by micrometer movements. Clear and direct-vision view-finders.

The Zeranor lens gives very critical definition and is equal to most lenses at double the price. Price £6:15:0

(Nine equal payments of 15/9), including 3 Slides. Film Pack Adapter 0/9. Extra Slides 1/9. Best Leather Case 15/-. Also fitted with Meyer Trioplan f/2.9 lens.

Best Allowance for your present apparatus in Part Exchange.

ENSIGN DAYLIGHT ENLARGERS

As easy as making prints!

No more difficult to handle than an ordinary printing frame, and the results are incomparably more attractive. There is no focussing. Just put the negative at one end and the bromide paper at the other. Made of seasoned wood, leatherette covered. Holders for negative and bromide paper. Achromatic lens and metal shutter.

No. 2. Square. For post card enlargements from negatives $2\frac{1}{2} \times 3\frac{1}{2}$ in. ... 17/6

No. 2M. Square. Enlarges Ensign-Midget negatives to $2\frac{1}{2} \times 3\frac{1}{2}$ in. size ... 17/6

No. 3. Conical. For $\frac{1}{2}$ -plate enlargements from negatives $2\frac{1}{2} \times 3\frac{1}{2}$ in. ... 27/6

ENSIGN, LIMITED, HIGH HOLBORN, LONDON, W.C.1

'DREM' EXPOSURE METERS

Correct exposure is necessary to obtain really excellent negatives, and this is ensured only by means of a good exposure meter. Over 350,000 DREM EXPOSURE METERS are now in use. When buying an exposure meter see that it is a DREM.

"JUSTODREM" For Holiday Snapshots. 15/-

"DREMOSCOP" For the serious amateur. 30/-

INCLUDED

post free 2/2.

The VITASCOPE

A scientific patented attachment easily clipped on any lens rim. A comparison between photographs of the same subject with and without the VITASCOPE at once show greater realism—in fact a semi-RELIEF effect. Modelling of nearby objects is more perfect. It includes the added advantage of a lens shade, which keeps unwanted sun rays from the lens.

Orders must be accompanied by a remittance (2/2), and enquiries with stamped and addressed envelope.

External Diameter of Lens Rim Measurement Essential.

LENS SHADE

Reg. No. 778562

There are many striking effects and compositions only possible against the light. Why not equip your camera to take them? Besides, bright light can often strike direct into the lens, especially when reflected by sea or other water. Prevent this—fit a C.E.W. Lens Shade. Instantly detachable.

PRICES: 2/- each up to $1\frac{1}{2}$ in., over $1\frac{1}{2}$ in. **2/6 each**

When ordering state size of front of lens mount.

VOL. LXXVIII. No. 2385.

WE know that many readers are glad to hear at the earliest moment that the index for the half-yearly volume is complete and available. We therefore have the pleasure of announcing that the index for Vol. LXXVII, January to June, 1934, is now ready at the usual price of 3d. (by post, 4d.), and can be obtained from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1. Also available from the same source are the lettered binding covers, which cost 4s. 1d. by post. The bound volumes make really handsome and useful additions to the photographer's library, while those who keep their weekly copies loose will find the index of immense value in tracing any and every item of the contents—letterpress, illustrations, or names of contributors.

The Wedding Group—New Style.

The other day we attended a modern wedding. So did the photographer. In the old days—of which there are still relics in some professional photographers' windows—the photographer attended by appointment, arranged a frightfully self-conscious group in the garden, and afterwards mounted copies were distributed to certain friends of the family, who promptly buried them in the attic. Nothing like that on this occasion. When the couple emerged from the ceremony—registry office, of course—they were halted on the steps by the brazen lens of a camera, which also included in its stare other members of the party. These free-lances then, having kept a wary eye on the restaurant where the bride and bridegroom had adjourned to entertain a few friends, presently appeared

TOPICS of the Week

HUMAN SWALLOWS.

An article on "Bathing-Pool Photography" appears on another page in this issue.

there with two specimen prints, half a crown each unmounted, or four shillings the pair. Under the eyes of the happy couple—not to speak of the mothers of the parties, who also appeared in one of the pictures—what could any wedding guest do but summon up a smile of sickly eagerness, put down his name on the order and four shillings beside it? Brigandage is not limited to China and such-like places.

Cruising and the Camera.

Those who have not been on ocean cruises this summer are now the prey of those who have, and who bring out their photographs to show you what a lovely time they had on deck, and incidentally—quite incidentally—seeing the world. When it comes to colour photographs taken on an ocean cruise at eighteen-pence a time we are in for a regular feast of it, not only at the places of call in the Mediterranean, which do not seem to matter so much, but on the boat, on the games deck, and in the swimming-pool, where you can make a perfect study of flesh tones. Such garments, as are worn on these cruises are in the brightest of hues, so that altogether it is a carnival for the colour picture maker. One photographer confessed to us that the cruise had the unfortunate effect of separating himself and his wife. "What, didn't she go?" we said. "Oh, yes, she went," he replied, "but, you see, the boat rolled so much that she was only comfortable so long as she sat quite still, and I was only comfortable so long as I was walking about." The legend of Jack Sprat brought up to date! There are disadvantages, too, in these flying visits, one of which

was amusingly illustrated by the same photographer. His boat stopped at a Spanish port, and on shore he went. There approached him a bright urchin to whom he held up one peseta. This boy thereupon signalled four other similar youths, who lined across the road, and made a very effective group. To each of them a peseta, which he thought the equivalent of a penny. On returning to the boat he found that he had distributed amongst them something like five shillings!

A Question of Terminology.

Being purists on the subject of photographic terms, we were glad to hear a speaker in a recent discussion at the Institution of Electrical Engineers stand up for the right use of the word "photomicrograph." Even in scientific periodicals one constantly sees the word "microphotograph" when obviously "photomicrograph" was meant. This speaker said that on a previous

occasion when he had protested against the words being regarded as interchangeable he had been referred to a standard dictionary in which both terms were given as though they meant the same thing. The "microphotograph" will always stand to the microscopist as meaning a photograph so small that it cannot be made out except with optical aids, while the "photomicrograph" will mean an enlargement of what is seen under the microscope. A similar confusion occurs with the word "telephotography," which is sometimes used to signify wireless transmission of photographs, instead of "long-focus" photography.

Going by Rail.

The Astors, who chose to spend their honeymoon in a railway train, were not as unenterprising as some people might suppose. Apart altogether from trans-continental journeys, it is astonishing what this little country of ours—the pioneer

railway travelling country in the world—has to show to the traveller on the iron road. The other day we had occasion to go by rail through the Buxton and Matlock district of Derbyshire, and marvelled again at this beautiful heart of England as seen from the carriage window. If something in the nature of the American observation car were attached to our trains it would do a good deal to popularise railway travel. For seeing the country the railway is excellent; for seeing the towns, much less so. You get no adequate impression of any large town on passing through its station; but some of our great cathedrals, especially Ely, rising from the flats, Lincoln on its hill, Durham, Peterborough, and Boston "stump," are best seen from the railway, and their mediæval builders might very well have foreseen a day when the eye of a traveller, by a means of locomotion then undreamed of, might be refreshed by the sight of them.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Mirror Focussing.

In photographing a reflection in a mirror, if the camera is 5 ft. from the mirror, and the object 50 ft. from it, should the lens be focussed at 5 ft. or 50 ft.? D. G. R. (Nr. Machynlleth.)

As we informed you by letter, neither of the suggestions made is correct, and we gave you the right answer. We then promised to go more fully into the matter for the information of other readers as well as yourself.

We have made a diagram which, although different from your own, embodies the same idea. With this diagram your question would read, should the lens be focussed on the distance from L.1 to M, or the distance from X.1 to M. As we informed you, the distance to be focussed for is neither of these, but the sum of the two.

It amounts to the same thing as if the object X.1 were at the position X.2, with no mirror intervening; that is, with the object as far behind the mirror as it is now in front of it. To put it another way, suppose the camera were moved from C.1 to C.2, and the mirror replaced by plain glass, or removed altogether. It is evident that the distance to be focussed for would be L.2 to X.1.

You will sometimes find the information given that a person photographing a mirror reflection of himself and camera must focus for a distance *double* that from the lens to the mirror. This is quite correct, because in this case the lens-to-mirror distance and the object-to-mirror distance are the same; so that double the distance is actually their sum.

The whole matter becomes of some importance when, as is sometimes the case, a mirror is used in awkward and confined spaces in interiors. A small "black" mirror, close to the lens, may be successfully used in photographing clouds.

Strange Marks on Negatives.

I enclose some negatives which I developed myself. I found afterwards that the shutter was faulty, but it has been put right, and I have had no further trouble. You can imagine my surprise at the results, especially as the negatives were developed in complete darkness. Can you explain the black lines, like string, with curves and twists? I can understand the general dullness, but how the string? The camera had nothing in it.

L. W. T. (Horsham.)

The explanation of the marks on your films is really a very simple one. It is evident that the shutter was open the whole time, and the camera must have been moved about with the lens pointing towards a bright light, which left a trace on the negative corresponding to the movements. If you care to make the experiment of opening your shutter, pointing it at a bright light, and moving the camera about in an irregular manner, you will be able to repeat the effect exactly.

July 25th, 1934

PICTURE-MAKING *on* HOLIDAYS

The casual snapshot and the well-considered pictorial photograph are both occupying the attention of innumerable amateurs on holiday at the present time. The following notes contain some good advice for those whose photographs usually belong to the former class but who are anxious to do better work.

THOSE who take cameras with them on their annual holiday to a new location can be divided into two classes. The first, and larger class, carry the camera frankly for snapshots of the entirely personal type. Family groups sitting on the sands, picnic or bathing parties, with an occasional portrait snap, are the subjects that generally occupy the attention of these camera owners. They are all unconsidered, and are taken with a blissful belief in the mysterious capacity of the camera, without any knowledge of how the photograph "happens."

It speaks volumes for the genius of those who are responsible for the average cheap camera and modern film that satisfactory results are obtained in this manner in such large quantities, and with no merit on the part of the camera user.

The second class includes those who are real amateur photographers with a knowledge of the craft. The camera in their case is regarded as more than a small piece of luggage to be taken on the holiday; it is, in many cases, definitely the first consideration of the trip.

Preliminaries.

Much has already been written in these pages regarding the preparations for a photographic holiday; the overhaul of apparatus, choice of material, etc., and need not be repeated here. The real adventure begins when the place selected for holiday is reached.

The enthusiast may rush off and start making exposures at once; others may have family considerations to restrain their ardour. The wiser and more experienced worker will first stroll round at leisure, and perhaps spend the first day or even longer in spying out the land and investigating its possibilities before attempting to use the camera at all.

In either of these cases one fact will remain constant: the best pictures will not be taken until the holiday is nearing its end.

The reason for this is twofold: first, various aspects of the scenery will be better appreciated by that time, and secondly, the novelty of the place will have worn off; the obvious things will no longer appeal, and the pictorial effects and viewpoints that have to be sought and recorded with individuality will have been discovered and digested.

This procedure is inevitable with the real pictorial worker—the amateur who takes his picture-making seriously with a view to producing results that will count in the exhibitions and competitions.

Points of View.

This statement must not be taken in any sense as a discouragement, but on the contrary. In fact, every good worker will recognise it as true in his own case, and it remains, therefore, for him to apply the process to the best advantage. Do not, for instance, neglect to seek out the possibilities of the new district soon after arrival; do not, however, fail to take even the obvious things at first. They all teach their lesson, and the desire to do something better, to find different and improved viewpoints for the same subject will grow.

This particularly applies to the locality that boasts of many attractive and pictorial features. Visits to the same spot at different hours of the day will produce many alternative results, and, finally, the masterpiece. The same view seen from different angles, some higher, some lower, from east, west, north or south, all give a variation of the same story; but one of them will be the best. In rare instances, the best may happen to be the first shot; but this does not occur often.

Some views, particularly at the

coast, depend for a successful rendering, the kind that will lift them from the commonplace, upon some adventurous detail. The presence of a boat, or white sail, or figure in just the right place at the right moment when the lighting and other factors are correct, will happen sooner or later. Only a feeling of what is necessary to make that subject perfect arising from careful study of the setting by repeated visits and observation will make an appreciation of the right moment a certainty.

Comparing Results.

Frequently two photographers will take the same subject; one will be an ordinary snapshot, a mere record with no character; the other, a picture that will claim immediate attention and score every time. The question will be asked: Why are these two photographs of the same thing so different? The answer is that the first has been unconsidered; the view may have appealed for its attractiveness and has been snapped forthwith and finished with. The other has been more carefully considered on the lines mentioned above, and may possibly be the third or fourth attempt, each getting nearer the ideal, until the right lighting and the right viewpoint have been arrived at.

It will pay every holiday photographer, therefore, who wishes to turn his annual vacation to good account in making pictures to take this advice to heart. Do not be satisfied with the first sight of any holiday view, no matter how good it may look. Do not despise the picture postcards seen in the local shops; they will indicate what to look for and what to avoid. Above all, do not be afraid of doing the same subject over and over again.

The final achievement will be a greater success and more nearly approach a work of art.

Summer Photography in Town

SUNLIT ALLEYS FOR PICTURE-MAKING

By W. S. G. PROCTOR.

TO most photographers the beauty of the countryside is, naturally, more alluring than the drabness of the town alley. Not only is

beneath the mantle of light and shade which nature throws over them.

The presence of shadows is a primary condition of success in alley photography, for it is largely on the use he can make of shadows that the artist has to depend when composing his picture.

Unlike photographs of landscapes, those taken in alleys generally gain pictorially when the sky is excluded from the composition. Usually the

Over the garden wall.

a rural environment in itself more congenial than the byways of our towns, but rustic bridges, thatched cottages and tree-flanked streams seem to offer to the photographer more scope for practising his art than cobbled streets and brick buildings.

Nevertheless, the narrow streets and courts in the older parts of our towns are, to the observant photographer, far from being a barren hunting-ground. On the contrary, they offer innumerable subjects for camera studies when conditions are favourable. Viewed under a grey sky, these usually squalid localities cannot be termed charming, but a ray of sunlight falling on gable or pavement can make, temporarily, a vast difference in their aspect.

Seen under direct sunlight, the surfaces of sombre brickwork and masonry, patterned, as they often are, with the shadows cast upon them by neighbouring architectural features, seem to hide their inherent ugliness

Left in charge.

effect of its presence is to produce a marginal high-light which competes with the principal object for our attention.

The main centre of interest should be somewhere in the alley itself, and may consist of a human figure, a horse and cart, or even a dustbin. But, whatever it be, it should, of course, harmonise with its surroundings. An old man in tattered garments would be in keeping with the age-worn buildings, while a gentleman in plus fours would mar the whole scene. A home-made handcart might tend to preserve harmony, while a motor car would certainly destroy it.

Sweeping-up.

But the decision as to what form the principal centre of interest shall take and what position in the picture it shall occupy must be left to the photographer's conception of the æsthetic. The same may be said with regard to the suitability or otherwise of the prevailing distribution of sunlight and shadow over the scene, and of the lens aperture necessary to secure the most pleasing depth of focus.

Going shopping.

SANDS HUNTER & Co., LTD.

37, BEDFORD STREET, STRAND, LONDON, W.C.2

July 25th, 1934

As a rule, the alley photographer finds, in practice, that he is compelled to make a panel-shaped picture with the longer sides vertical. The cramped space in which he works often forces him to include, near the vertical margins of his plate, the images of objects which play no part in his composition. These features he excludes from his print, a practice which accounts for the obligation mentioned.

Foremost amongst the technical problems which confront the alley photographer is that relating to exposure. It should be realised at the outset that transparency in the shadows of the finished print is essential to success and that, to secure this end, ample exposure of the plate is necessary. The time-honoured rule of exposing for detail in the shadows is a safe one to follow and the

An evening chat.

photographer is strongly advised to use an exposure meter.

The development of the plate requires more than ordinary care. If this is unduly prolonged the contrasty character of the subject will be greatly exaggerated in the print. Brief development helps one to retain the relative values of the tones.

But a little practical experience in alley photography will soon convince the recruit to this branch of our art that, as an exercise in technique alone, it is worth his attention. And in its pictorial aspect he will find ample scope for developing his æsthetic taste, his search for pictorial material amidst normally ugly surroundings gradually opening his eyes to the transient beauty with which sunlight often adorns them.

SUBJECTS *Holiday-makers Often Miss*

By P. R. S.

MANY must be the interesting photographable subjects a camera user may fail to see when holiday-making, or even when on a photographic society's outing, should the ground not be very well known to those visiting it.

It has often been said that gala days in towns and villages are bad times for the really serious photographer. On such days camera users are prone to take advantage of cheap fares to such places, but on arrival they are often disappointed to find the principal streets unphotographable because of a display of flags and bunting.

Postcard Views.

Such decorations, however, are frequently a blessing in disguise, as they make the taking of orthodox "postcardy" views difficult, if not impossible, and drive the photographer into the byways where the most picturesque and least-photographed bits are far more likely to be found.

Many tourist photographers make a point of examining the postcard views exposed for sale in shop windows in order to see what subjects the district offers, and having seen them proceed to make exposures upon them, feeling sure that the expert postcard operators have discovered the best views.

That the commercial or professional men have discovered the best selling subjects no one will dispute, but

the picture-loving amateur would in most cases do well to ignore hackneyed subjects, and carefully seek views the postcard men pass over as unsaleable, not worth making an exposure upon, or, what is more likely, do not see.

The Point of View.

The fact that holiday-making amateurs often miss the best and most pictorial subjects is proved by a recent article appearing in these pages, entitled, "Sunny Days."

The contributor, it may be remembered, gave a picture of a Domesday mill, a subject photographed each year by many amateurs; the latter, however, invariably picture the side of the mill facing the public road, a point of view which includes many disfiguring advertisements.

Very few photographers find their way to the back of the old mill as "W. L. F. W." did, a none too easy task, as a fence and pigsty have to be negotiated, a most uninviting task for photographers clad in holiday attire, while a fear of trespassing may have deterred some from exploring the rural beauties of the old millpond and stream.

A few days after the publication of the note and picture referred to, Mr. Bernard Falk, writing in the *Daily Mail*, told of many interesting things uninitiated trippers are likely to miss, and although the article was not penned specially for camera-men, photographers who read it will no

doubt make a point of making exposures upon some of the subjects the writer named.

Typical Subjects.

Among the many subjects that may be said to escape a holiday-maker's attention, and deserve to be recorded by the camera are the following: the peculiar quartered stone ball on Clare College Bridge, Cambridge; the stone at Hastings on which, according to tradition, William the Conqueror had his first meal on landing in England; the field at Bridgefoot Farm, beside the Royston-Newmarket road, in which Cromwell held his council of war; also the 200-year-old milestone opposite the field; carved wooden effigies (the faces of which vary when regarded from different angles) in the Priory Church, at Christchurch, near Bournemouth; the peculiar spyhole, or "bull's-eye," over the steps leading to Mitre Court, in the Temple, London; the old village cross at Meriden, near Coventry, which is reputed to mark the centre of England; the grave and tombstone of Mr. Andrews, the original "Old Moore," in Royston (Herts) churchyard, and a corbel of Chester Cathedral bearing grotesque portraits of Beaconsfield and Gladstone. These are but a few of the little-known subjects a holiday-maker may find, and are merely offered as suggestions for the sort of thing he should look for.

Under the Chute. 1/50th sec., f/8, 'chrome film.

THE men, women and children of England are taking to the joys of the open-air bathing-pools now being built in all parts of the country, as quickly as the proverbial ducks take to water!

Aquatic sports are shortly going to play a larger part amongst us than has hitherto been the case, and consequently the amateur photographer will do well to prepare himself to make successful photographs, especially when the gala performances and inter-pool competitions which are being contemplated on a large scale take place.

A Modern Bathing-Pool de Luxe, 1/50th sec., f/11, 'chrome film.

Bathing-Pool

The Junior Chute, 1/250th sec., f/5.6, pan. film.

Already bathing-pools are popular at Blackpool, Hastings, Southport and Scarborough; and Clacton, Skegness, Margate and Yarmouth do not lag behind. In addition there are the large bathing-pools attached to road houses in all parts of the kingdom, particularly in the neighbourhood of London.

On a sunny day the swimming-pool presents a most animated scene, and here the photographer can enjoy himself in lazy fashion whilst securing a number of lively pictures. From a deck-chair upon one of the

Sun-bathing, 1/50th sec., f/11.

Photography

By CAROL TOWNLEY.

terraces reserved for non-bathers an excellent view of the pond and the bathers is obtained, and it is usually only a matter of deciding upon the right focus and stop (which in most cases should be a small one), and then waiting for attractive groups to come into range, for successful "snaps" to be secured.

The variety of photographs to be obtained is naturally considerable. The lady being taught to swim whilst her anxious instructor shouts directions to her from the side of the pool makes an amusing picture, surpassed, however, in interest by that of the more proficient or expert diver. As regards the latter, it is only safe to attempt photographing him in the action of diving if the shutter works at not less than $1/250$ th of a second, and it may be necessary to increase the pace to $1/300$ th if possible. This shutter speed naturally demands the use of a larger aperture or under-exposure may result.

If the diver can be photographed against the sky, or anyway be caught outlined against some plain, light-

During the Heat Wave. $1/100$ th sec., $f/8$, 'chrome film.

coloured background, it is helpful, for when, as is often the case, it is not easy to approach near him he is liable to be somewhat lost sight of in the general surroundings, especially when the scale of the photograph is necessarily small. If, however, the ideal position from which to make the exposure cannot be reached, drawbacks as regards surroundings, etc., may be overcome by making an enlargement from a small portion of the negative only.

During the bright summer months practically any type of camera can be used for these pictures. Even the cheap snapshot instrument with small-aperture lens will give a good account of itself. The exception is with subjects which include diving or rapid movement on the water chute. For these, a shutter giving speeds up to $1/250$ th of a second (focal-plane or Compur) is necessary. For most of the other bathing-pool subjects, slower speeds will secure sharp results; even with diving pictures, if the diver is taken coming towards the camera. The faster shutter speeds are only necessary for broadside-on rapidly moving objects.

High Diving. $1/250$ th sec., $f/5.6$, fast pan. film.

Low Diving. $1/250$ th sec., $f/4.5$, fast pan. film.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

DEVELOPING PACK FILMS.

I AM always pleased when readers of these notes write and ask questions, or suggest some matter on which I might write. One now wishes to know just how I develop pack films, with which he apparently finds trouble; another is uncertain about the effect of a rising front. For this week I will run over the developing part, although there is nothing I have not described before.

NOTES & NOTIONS for the LESS ADVANCED WORKER

In a back volume of this paper I came across a letter in which the writer expressed surprise that any photographer should use pyro as a developer, and proceeded to enumerate a string of its demerits. Another correspondent said that the reason why pyro was still used was that it possessed not a single one of the faults attributed to it. I agree. For negative-making I know of nothing better, if as good.

The Developer.

My stock pyro takes but a few minutes to prepare, so I make it up only in small quantities. In about 6 oz. of water I dissolve 100 grs. of crushed potassium metabisulphite, then 1 oz. of pyro, and make the volume up to 8 oz. This is kept in a small bottle with a rubber "cork."

When I am about to develop a few negatives I take 1 oz. of this pyro and 9 oz. of water. This we may call solution A. Then in about 6 oz. of water I dissolve $\frac{1}{2}$ oz. anhydrous sodium sulphite and 160 grs. of anhydrous sodium carbonate, and make up to 10 oz. This is solution B. If I think that bromide is desirable I add a few drops from a 10 per cent solution, but more often than not I leave it out. For plates I take one part each of A, B and water. For

Birthplace of Charles Dickens.

In the earlier days of film packs I had plenty of trouble with them. We all did. The "accidents" were of many kinds, often unforeseen and unavoidable, and particularly maddening. As far as I know, these troubles have all vanished. I use considerable numbers of packs now, and have only one complaint about them—the staggering price. I cannot understand why they should cost five times as much as the finest plates used to cost over a long period.

I very rarely open a pack to remove exposed films until I get to the end of it. This can be done, however, with many packs quite easily and safely. I prefer, when I want to take a subject and develop at once, to use plates, and for that reason I have slides for such cameras as take packs.

Norman Font, Portchester.

pack films I use equal parts of A and B, without further dilution.

Many photographers put a whole batch of flat films in water, and transfer them to the developer, keeping them moving till they are all nice and black both sides. This is quick, and apparently effective. I prefer to do them two at a time, in a half-plate dish, which is large enough even for quarter-plates.

Developing Procedure.

In this dish I start with about five ounces of developer. On top of the dish I put a stiff card. On this I place an empty 5×4 plate box, into which I put the twelve films from the pack. Two of the films I lay face down on the card, and put the remainder aside in the box. I tear off the paper from the first film, catch hold of one edge with a small pair of pliers, and drag it backwards and forwards once or twice through the solution. It soon lies limp at the bottom of the dish, which is rocked once or twice. Meanwhile I have been holding the card, and the other film face downwards on it. This film is now treated similarly. In less time than it has taken me to write this description, the two films are lying quietly side by side. I cover the dish with the card, and rock the dish gently at intervals, first longways and then crossways, taking care not to disturb the films.

At the end of a couple of minutes it is easy to identify the subject on each film. I like to be able to do this, as it is quite likely that one may require less development than the other. This, as I have pointed out several times, is useful in cases of contrasty subjects, for which full exposure and shorter development are best. If the subject is likely to be flat and dull, I give fuller development to increase the contrasts. I am guided a good deal by the appearance of the back of the film.

When I do take the negative out of the developer I give it a quick rinse in a large dish of clean water. I keep my fingers under the negative while I do this, letting it float

about in the water over my hand rather than hold it even by the edges. It then goes into the fixing dish.

The Fixing Bath.

The solution in this has been prepared by dissolving 1 lb. of hypo in 2 pints of hot water, to which has been added, when cool, another pint of water in which 1 oz. of potassium metabisulphite has been dissolved. The negatives have 10 to 15 minutes in this fresh bath (I never use one twice) before going into a dish of clean water.

After each pair of negatives is developed I throw away one ounce of the developer, and add one ounce of fresh mixed A and B solutions. This results in keeping the developer sufficiently active.

These film negatives I do not wash by the two-dish method. It is done in the one dish. I empty out the water slowly, and let fresh water run in a steady stream on to one sloping side of the dish, setting the films swirling round and round. This is repeated about a dozen times in an hour, when the films are surface dried with damp chamois leather, and pinned up along the edge of a shelf to dry. I always afterwards snip off the corner where the pin has left a burr, as this will scratch badly.

The Illustrations.

Except that the illustrations are both from 3½×2½ films made in this way they have no particular bearing on the subject. The Dickens house I had often passed, but never had a chance to photograph till recently. It is a useful addition to a small collection of Dickens subjects picked up here and there at various times.

When I took the Norman font I had no tripod with me, as I did not anticipate any subjects of this kind. The camera was stood on a convenient table, which was, however, too high for such a low subject. I should have been floored except for the fact that the camera fortunately has a fall, as well as a rise, to the front, and this just did the trick.

W. L. F. W.

"The A.P." Monthly Competitions

PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers. **FIRST PRIZE.**—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the next competition is Tuesday, July 31st, and for the August competition, Friday, August 31st.

How I make my EXHIBITION PICTURES

No.
CCXXXIX.

—
Mr.
R. C. L.
HERDSON.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"NO hunter enjoys seeking for shots more than I do, yet there is this great difference: the hunter shoots (with a gun) to destroy; while I shoot (with a camera) to create. Every phase of photography appeals to me, whether rambling in town or country, or shut up in a dark-room. I make pictures for the very joy of doing so, and tackle any kind of subject that may at the time appeal to me.

"For many years I was an enthusiastic snapshotter, in the

true sense of the word, and, like so many others, I shot indiscriminately, hoped for the best, and sent the spool to the D. & P. man to do the rest. It was not until I became a member of a photographic society that I discovered the possibilities of camera work. Then, like all enthusiasts, once having seen the true beauty of the art, further knowledge was most eagerly sought for. The value of photographic clubs cannot be over-stressed, nor the work they do too highly complimented. Being a member of the Camberwell C.C., I was fortunate in having so able a coach as Mr. J. H. Clark. With his valued assistance, backed by 'The A.P.' and the Club's monthly competitions, I felt I was steadily progressing along the right lines.

"Every reader of these lines who is at present in the 'snapshot' stage is seriously advised to follow the same course. Join the nearest photographic society; read 'The A.P.' every week, and give up relying on the D. & P. establishment for making negatives and prints. It is only by learning to do one's own D. & P. that progress in photography can be made possible and enable an understanding of its possibilities to be appreciated.

"I do not believe in submitting one or two 'stock' prints to an unlimited number of exhibitions, and seldom send out a print more than three or four times; thus I have to be continually making fresh pictures. My favourite camera is a $2\frac{1}{4} \times 3\frac{1}{4}$ roll-film, although I often carry a Sanderson $\frac{1}{4}$ -pl. field outfit. The compactness and lightness of the former, however, make this my more constant companion. With this I usually use Selochrome or Selo S.S. pan. roll film, while for the field outfit I use Ilford Soft-gradation pans. (backed). These I expose upon a meter reading.

"The majority of my plates and films are developed by the time and temperature method, using a pyrosoda developer, the time of development being about twenty per cent less than that advised by the manufacturer.

"Kodak Royal Tinted is my favourite paper, but when I think another make would better serve my purpose I never hesitate to change. Amidol is the developer that I find best to work with on the Kodak paper. I seldom make contacts. Usually I make whole-plate enlargements, which I trim, and when satisfied that I have secured the best composition I enlarge to 15×12 in.

"Spotting and oiling are done after the print is mounted. Usually I do not have to do much in the way of after-work on my prints, preferring to spend more time while making the exposure to secure as far as possible what I want upon the negative. Where after-work is necessary I think it should be done. After all, it is the finished picture that is intended for public exhibition, and so long as the so-called faking is not conspicuous then I consider the artist has the licence to employ any method he might choose to secure an effect."

HUMBLE SPLENDOUR.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

THE two woodland subjects reproduced on the opposite page, Nos. 1 and 3, are good examples, in their class, of this sort of thing; but, in the former, "Sunlight in a Wood," by J. H. Godfrey, it would undoubtedly have been wiser to have arranged for the inclusion of the base of the tree on the right, and, in the latter, "Summer Afternoon," by S. P. Mandeville, the value of the sunlight is appreciably diminished by competition with the bits of sky filtering through the foliage.

Promising Essays.

Both, it may be said, are promising essays in a kind of work that is not so often seen nowadays, and, as such, are worthy of encouragement. If it were possible for the good features of each to be combined, however, the result would afford an indication of what to aim for, and would possess an appeal that at present is scarcely attained by either.

In each there is an effect of sunshine. It is better expressed in No. 1, principally for the reason that the competition of the sky is avoided, and it is emphasised by the darks of the two foreground trees. The foreground is inadequate, and, besides the drawback occasioned by the absence of the base of the right-hand tree, a feeling of instability arises in consequence.

The case is different with No. 3, for the foreground is ample and well diversified. The trees, while no less characteristic, assume a greater grace of form, but they are of another type, and it could not be expected that the pines of No. 1 could vie with the less formal shapes of No. 3. If there were an equal depth of foreground in the first, the disposition of the subject material could be viewed as affording a quite acceptable composition in either example, but "Sunlight in a Wood" could do with a foreground such as "Summer Afternoon" includes, and the latter would be immeasurably enhanced if the sunlight were so well expressed as in the former.

Countering Competition.

Where the subject is found in the depth of a wood, as in No. 1, it is easier to avoid or counter the competition arising from patches of sky

showing through, but when a position near the edge or a clearing of any size is chosen, it is quite another matter.

The control processes, such as bromoil and its derivatives, or gum, enable a competent worker to correct any deficiency in this direction; but it demands not only a technical mastery of the process, but also a considerable knowledge of the way trees grow, and their formation, as well as a reasonable capacity in draughtsmanship. Otherwise, any attempt at correction is likely to prove worse than the defect itself. Panchromatic plates, in connection with an orange or deep yellow filter, may, by cutting out the blue, offer some advantage in certain cases, but the correction in colour rendering that might be expected could not altogether overcome any difference in light intensities.

Control and Selection.

Control, whether purely photographic, as when panchromatic materials are employed, or by after-treatment, as in the case of the pigment processes, necessarily requires a good deal of experience before it can become of any service.

That it eventually repays the trouble taken to acquire it is undeniable, but it is wiser for the novice to seek to avoid any necessity for it by exercising the greatest possible care in selection of the subject material in the first place. If such a course be adopted, much of the need for control will be obviated, and the eye will be enabled to choose a subject instinctively in such a way that it more or less arranges itself in satisfactory form.

Moreover, it will be obvious that the less control is needed the easier it is to introduce it without detection, and, by the time that a reasonable power of selection has developed, the ability to utilise methods of control will come with it.

It is possible that control, in the photographic sense, is responsible for the tone of the sky in No. 2, "Autumn," by R. S. Patel. It would seem that an emulsion of the colour-sensitive variety was used accompanied by a light filter of appreciable depth. On the other hand, it may have been obtained by a certain amount of shading during the exposure.

A Touch of Exaggeration.

Whether such a depth of tone would ever appear in fact or not is open to question. It is true that the scene comes from India, and it is possible that, under certain conditions, the sky does attain such a depth; but, whether natural or emphasised, it conveys a feeling of exaggeration.

Nevertheless, it is something to have reached the stage which knows that the sky is not satisfactorily rendered by a blank stretch of whiteness; but, at the same time, it is as well to appreciate that an excess of emphasis is quite as distasteful as none.

"Morning" (4), by V. S. Barne, is likewise exaggerated in the depth to which the tone of parts of the sky has been carried. Here the defect seems to be attributable to a measure of under-exposure, accompanied by a marked degree of over-development of the negative in relation to the paper on which it was designed to be printed. The consequence is that the contrasts of the negative are too great for the printing paper to cope with, and the remedy is either to reduce the time of development of the former or to utilise a printing paper of softer characteristics.

Contrast in Excess.

The dense black of the clouds in the upper portion is very much heavier than it would appear to the eye, and the contrast with the light below is excessive.

Similar remarks are applicable also to No. 5, "Day's Finale," by A. J. Potter, and, if anything, the degree of under-exposure appears to be greater; but, in No. 6, "The Weald," by J. D. Hastings, a much nearer approach to correctitude of tone values, both in sky and landscape, is to be seen.

The sky and middle distance are very nicely rendered indeed, and, except for the fact that the clouds are somewhat bitty and detached in character, the print provides an object lesson to the others. On the other hand, the foreground, if about the right depth of tone, is scarcely sufficiently relieved by the two hedges, and a little more variety would be advantageous. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"DECORATION," by W. A. Hooker.

HAVING regard to the nature of the subject and the angle from which it was viewed—on account of which it attains a marked degree of originality—it is probable that the more conservative would be inclined to consider a representation of this type as something in the nature of a stunt or an intentional expression of eccentricity.

Novelty and Eccentricity.

To some extent, a point of this kind must be a matter of opinion, but, before so dismissing the picture, it is necessary to draw a distinction between a work that has been deliberately perpetrated as an outrage upon artistic susceptibilities or with the idea of producing something so much out of the ordinary as to create a suggestion of exaggerated novelty, and one in which the intention is sincere, but which acquires originality from an individualistic point of view.

Primarily, it seems to be a matter of intention. If that be genuine, it would not be altogether fair to regard its expression as a stunt, however unusual it might be; but, if the unusual is employed simply to attract the attention and any æsthetic quality is more or less fortuitous, most people would agree that the epithet is deserved.

In the general run of such works, there is something that seems to give an indication of the intention, and most people of any practical competence in photography are able to distinguish the one class from the other. The line of demarcation, however, is not always easy to determine, and some efforts on the border line might be ascribed by some to the stunt category and by others to the result of an individualistic turn of mind; but, examined with these considerations in view, it is scarcely possible, in this particular instance, to doubt the sincerity of the original intention.

Decoration and the Stunt.

It is true that many efforts of the stunt class have been camouflaged under the same title, but that is no reason for either damning it or impeaching the original motive; nor, except for the fact that the line of sight is directed upward instead of being on the level, is there much departure from the normal point of view.

for the dark of the dado along the base serves the same purpose.

In other respects, the representation hardly exhibits any extraordinary feature, for a painter at work is more or less commonplace as a subject, and the usual conventions of composition and placing have been followed. The figure itself (1) is placed upon one of an intersection of thirds, and, as the most important item and centre of interest, is thereby made to assume the necessary dominance.

No criticism lies against the work on this latter ground, but, arising from the angle of view from which the figure is seen in relation to the design upon which he is at work, there is a feature which is decidedly out of the ordinary. That is the sweeping curve which the two figures make in conjunction with each other. There may also be something unusual, perhaps, in the inclusion of the secondary figure (2), for it is seldom possible to find a painter engaged upon work of this description, and rarer still for it to be feasible for the work to be employed as an essential element in the design.

Justification in Design.

The curve in question imparts a sense of pattern, and not only justifies the title but also makes the intention apparent. It compels the inference that, on viewing the subject, the author of the picture was impressed by the decorative pattern formed by the real and the pictured figures in conjunction with each other and impelled to take it.

That the subject shows a man at work and the work upon which he is engaged, which is a thing that photography can do exceedingly well, provides yet another justification, if any be needed, and the picture, so far from warranting the appellation of a stunt, should be regarded as an expression of an original outlook and an individualistic point of view.

"MENTOR."

The disturbing factors usually associated with such a viewpoint have been avoided, and there are no converging vertical lines of any significance to create a sense of distortion. That being so, the viewpoint may be regarded as acceptable in that it does not, in itself, invite any suggestion of eccentricity. It does, however, involve the absence of a real foreground, or that portion of a picture which indicates a similar level to that from which the subject was seen, but there is no lack of stability in consequence,

July 25th, 1934

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

SKY FILTERS.

SIR,—Anyone who takes the trouble to draw the paths of the rays through a sky filter can easily see its effect. If the filter were behind the lens it would be true to its name, or if it worked right on the subject. But the distance from sky to lens is so large compared with that from filter to lens, that it works as a complete filter of half the density the yellow half holds. The writer of last week's letter is therefore right when he says pinholes would have no effect beyond lowering the density of the filter.—Yours, etc., J. H. BARNETT.

THE PERFECT CAMERA.

SIR,—May I make a contribution to the discussion on "The Perfect Camera"?

Having used an "Exakta" for nearly a year, I quite agree with several correspondents in their opinion that this is the nearest approach to the ideal, but I find the camera a trifle bulky.

If a camera of this type were produced taking ten pictures 5×4 cm. on the standard V.P. spool, instead of the usual eight pictures 6.5×4 cm., the dimensions could be reduced considerably, and the results would be a "pocketable" miniature reflex taking pictures of a very convenient size.—Yours, C. HARMAN.

MINIATURE AND IDEAL CAMERAS.

SIR,—Innumerable letters have appeared in your columns advancing various theories as to what is the ideal camera and the theoretical advantages of the miniature instrument.

The study of the types of cameras used by the men who do things (viz., contributors to your excellent series, "How I make my Exhibition Pictures") is therefore interesting. Going through the back numbers of "The A.P." for the last eighteen months or so, of fifty contributors who state the type of camera they prefer, six use various sizes between 9×12 cm. and $\frac{1}{2}$ -plate, thirty-one use $\frac{1}{4}$ -plates, twelve favour $3\frac{1}{2} \times 2\frac{1}{2}$, whilst only one uses a smaller size. As regards the size of the image, the C.D.V. owners usually employ a 5-in. focal length, whilst the $\frac{1}{4}$ -plate owners seem to prefer $6\frac{1}{2}$ or 7 in., and the majority in both classes use 10, 12 and even 17 in. telephotos for a great part of their work.

Again, the miniaturist "fan" claims his tiny versatile camera to be ideal for Press work, but I have yet to see the professional Pressman using one of the microscopic marvels, much less abandon his old 5×4 and depend entirely on the miniature for his living.

Theoretically the new miniatures are ideal instruments (for people with ideal incomes), but unfortunately this world of ours is severely practical.—Yours, etc., C. P. VAUGHAN.

WOODBURYTYPE.

SIR,—I was much interested in your note about Woodbury type in your issue of July 4th, and thought it might be of interest to call your attention to the use of that process in the Ceramic Industry, in which I was employed for some twenty years before and after the war.

In the early days of the war, my firm produced a number of photographs on tiles, of the celebrities of those days. These were pressed in clay dust—as the great bulk of glazed wall tiles are made—from a metal top die, which was itself made from an original on bichromated gelatine, which gave a kind of bas-relief. From the bas-relief, a plaster mould was made, and from that the metal die was cast.

I have probably got the details of the process wrong. It was a long time ago, and I had nothing to do with it personally. But it is evidently an adaptation of the Woodbury type. Of course, in the case of a glazed tile, the glaze varies in density of tone according to the varying amount of relief, and so a very effective result is obtained. I have in my possession a very striking portrait of a gentleman who was once active in the tile industry, done in this way by a firm of tile manufacturers in the Midlands. It is a really beautiful piece of work.

I don't know whether the process is still used in the tile industry, but I have not seen examples of it for some time. I seem to remember that the making of the gelatine relief was rather a tricky business, and of course portraits on tiles have little practical utility, which doubtless accounts for the process not being more used.—Yours, etc., BM/PXEZ.

MAKING THE MOST OF "THE A.P."

SIR,—I feel sure that there are many readers who do not get full value from *The Amateur Photographer and Cinematographer*. When they have finished reading the copy they buy every week they throw it away, which is a sheer waste of valuable and practical material.

The wise photographer—the beginner in particular—once he has read an issue, runs through it again, and cuts out all the articles which are of special interest to him. These cuttings he files away for future reference in large envelopes—one envelope for each branch of photography. In a few weeks he has the nucleus of a reference library, which will prove invaluable whenever he is in need of reliable information.

Many photographers cut out the monthly "A.P." exposure tables. After a week in one's pocket the tables are apt to become creased and torn. A much better plan is to paste the tables on strong cards. They will then stand wear and tear much better.

If you want the tables to fit inside your wallet you can always cut away the columns that do not apply to you. If you use ultra-rapid films only, all you need paste on your card is the subject column and the exposures for ultra-rapid films. Then on the back of the card add a brief summary of the notes on exposure.—Yours, etc., JOHN L. MARSDEN.

"The A.P." Monthly Competitions

AWARDS FOR JUNE.

ONCE more a remarkably fine batch of prints has been submitted in the monthly competitions, the Advanced Workers' Section in particular includes a number of first-class photographs that are well up to exhibition standard. The general quality of the entries in this section of the competition seems to be getting better and better, while the Intermediate Section now contains work that a few years ago would certainly have ranked high in the Advanced Section. From the large number of entries in the Beginners' Section there is no doubt we have a great number of enthusiastic amateurs coming along, who will be heard of in exhibitions and competitions at a later period. The awards are as follows:—

ADVANCED WORKERS' SECTION.
First Prize.—"To-morrow will be Friday," by W. G. Kennings-Kilbourn, Kenlyn, Abbey Road, Chertsey, Surrey.

Second Prize.—"The Land," by Edwin Broomer, Glendower, Falkland Road, Torquay.

Third Prize.—"Jacqueline," by E. Roper Yerbury, 48, Comiston Road, Edinburg.

Mounting Prize.—"The Pool of London," by

A. R. Turpin, 51, Colindale Lane, London, N.W.9.
Certificates of Merit.—"Corner at Bennington," by J. H. Clark, 304, Camberwell New Road, London, S.E.5; "Untamed," by John Muller, 53, E. 182nd Street, N.Y.C., N.Y.; "Solid Strength," by C. D. Notley, 34, York Mansions, London, S.W.11.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2, and Class 3, respectively.

Those awarded Honourable Mention are as follows: J. H. Clark (London, S.E.); William Clarke (Danfermline); G. Crosby (London, E.); A. G. Gardner (Bristol); William Jackson (Hull); H. G. Jenkins, (Southampton); Sorab J. Kharegat (Bombay); H. W. Lambert (Liverpool); George Norton (Accrington); Max Pethick (Leicester); W. B. Pollard, Jun. (London, N.W.); Auguste C. Raes (Brussels); Donald G. Sheldon (Hull); A. Gordon Smith (Kidderminster); Miss Margaret Stephenson (Aberdeen); E. Roper Yerbury (Edinburgh).

INTERMEDIATE SECTION.

First Prize.—"The Wheel," by P. H. Cook, 23,

Moffatt Lane, Brookmans Park, Hatfield, Herts.

Second Prize.—"Toilers of the Deep," by the Rev. John T. Webb, Wesley Villa, Luddenden, Yorks.

Certificates of Merit.—"Glass Bowl," by G. W. Rott, 407, Yardley Road, South Yardley, Birmingham; "The Sale," by Mortimer Friedman, 994, College Avenue, New York; "Evening Shadows," by A. V. Hubner, 241, Warwick Road, Carlisle; "Water-Lilies," by Charles Mottram, Valetta, Tenby, Pem.; "The Young Architect," by R. Townsend, White Hart Hotel, Newton Abbot, Devon.

BEGINNERS' SECTION.

First Prize.—"An Early Start," by Edgar Honnor, 3, Preston Avenue, Prescott, Lancs.

Second Prize.—"The Leisured Class," by T. G. Corkill, Box 4603, Johannesburg, South Africa.

Certificates of Merit.—"Allegro Furioso," by J. K. Deane, The Vicarage, Malmesbury, Wilts.; "Great Expectations," by Dr. W. H. Du Pre, Tisbury, Wilts.; "Homeward Bound," by R. S. Hardy, Imperial Hotel, Regent Road, Morecambe, Lancs.; "The Speed Boat," by L. F. Thomas, 27, Roberts Road, Anfield, Liverpool.

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOPHILERS USING AMATEUR CINÉ APPARATUS.

Amateur Cinematography

Filming at the Seaside By P. H. BRAITHWAITE.

THE annual holiday by the sea gives the cinematographer ample opportunity of obtaining pictorial records of many happy days which will be fully appreciated when the dark evenings return. It is hard to plot out any definite shots beforehand, as so many interesting subjects are liable to present themselves.

One thing must be remembered before the journey is undertaken. Obtain ample supplies of film beforehand; sufficient to cover the holiday, especially if the place visited is not too large, as difficulty may be experienced in getting supplies locally. Even in larger seaside resorts, dealers may have temporarily run out of stocks; in any case unnecessary time may be wasted in locating the shop.

Subjects and Exposure.

Once at our destination, it should be remembered that the seaside produces the best possible results as regards conditions of light. Sea and clouds act as excellent sun reflectors, and there is a notable absence of smoky haze prevalent in large towns. On this account, exposure will have to be considered, as actinic quality of light will be greater. An exposure meter will be found indispensable to avoid over-exposure.

The bulk of the film will, no doubt, be used on subjects actually on or close by the sea. Children are difficult to film in their natural easy poses. Patience is required, as a child's attention is never concentrated for long on a single subject. Producing the ciné camera provokes a stolid stare, which, of course, ruins the shot. Refrain from shooting for a while until they have resumed their bathing or their building of sand castles.

Caution can be exercised in approaching them at their games, and, by keeping the camera out of sight until the subjects have again settled down, the camera can be produced quietly and the shot undertaken.

Keep the camera as low down as possible, as the subjects are small, and aerial views are unsatisfactory.

If the children are in the water, care must be taken that the reflection of the sun on the water does not

shine directly upwards into the camera lens.

Backgrounds, too, must be taken into consideration. See that the horizon does not cut across the heads of the subjects being filmed. For preference, film below the horizon line.

Waves rolling their pattern on the sand may yield a simple but effective shot. The waves should be carefully watched beforehand so that one in which the pattern is given is what is desired.

Probably a slightly elevated standpoint may be turned to advantage, or, if high rocks are available, a climb to the top of one will enable a long shot of the whole beach and shore below being filmed, giving an unusual viewpoint. Cliff scenery, though enticing, should be avoided for filming purposes, unless there is actual movement above or below it.

The choice of subjects will be very wide: speedboats in action, crowds on the pier, or even the unsuspecting

angler caught hopefully hauling up his line, revealing a tiny fish.

A shot of the ever-popular slot machines doing business, or a short length of film exposed on the talented open-air concert party in action can be included. The arrival or departure of the excursion steamer, or, better still, a trip undertaken on it, will provide excellent original material.

A shot of the pier gradually disappearing as the boat leaves, the crowds on deck, and any passing craft give opportunities that should not be missed.

Numerous animated studies can be obtained in the harbour. By hiring a boat, excellent viewpoints can be obtained of fishing vessels by exposing a length of film whilst the boat threads its way in between them. Good views of the front can be got in this way.

Finally, always cap the lens and replace the camera in its case after filming, away from the heat and glare of the powerful summer sun.

The typical seaside action subject with a personal appeal that every ciné-amateur will record.

WANTED! SECOND-HAND CAMERAS

Owing to the colossal demand for our second-hand camera bargains we are urgently requiring fresh stocks. We can definitely offer you the highest allowance on your present apparatus in part exchange for a new instrument. A wonderful range of all the best cameras is always in stock for your selection—and remember, Gamage's are noted for the most convenient of easy payments.

EXCHANGE YOUR CAMERA NOW

The CORONET CINÉ CAMERA

A brand new guaranteed cine camera to take the popular 9.5-mm. Pathe film at a price lower than that of a good still camera. These cameras have all-metal body, built-in view-finder, powerful, smooth-running motor, film footage indicator, and fine quality f/3.5 anastigmat lens.

List price 65/-

GAMAGES PRICE

37/6

HIDE CASE, to hold camera and 2 chargers, 7/6 extra.

'BALDA' CAMERAS with Prima F/4.5 Anastigmat Lens

BRAND NEW.— $2\frac{1}{2} \times 3\frac{1}{2}$ Roll Film. Self-erecting, Vario shutter, 1/25th, 1/50th, 1/100th sec., T. and B. Hinged back, film flattening device. Reversible brilliant and direct-vision view-finders, front lens focussing. Two tripod bushes. Beautifully made throughout.

GAMAGES PRICE

55/-

ZEISS IKON'S LATEST MARVEL! Range-finder 530

Inspect this wonderful camera at your leisure at Gamage's. No obligation to buy. It is the famous 530 model Ikonta, 16 on $2\frac{1}{2} \times 3\frac{1}{2}$, and is now supplied with coupled range-finder—for dead accurate focussing on every occasion. F/3.5 Tessar and D.A. Compur, of course.

PRICE

£16:12:6

THE ROLLEICORD

Made by the world-famous makers of the Rolleiflex, Messrs. Francke and Heidecke. Features include:

- ★ F/4.5 Zeiss Triotar "taking lens" and brilliant Heideoskop anastigmat "viewing lens."
- ★ Special one-lever Compur shutter for setting and releasing in one movement. Speeds to 1/300th second.
- ★ Compensation of parallax. What is shown on the ground-glass screen appears exactly on the film.

★ The Price is low considering the Rolleicord has features found on cameras costing £20 and upwards. Gamage's offer the easiest of easy payment terms, too.

Cash price

For Amateurs Going Abroad

By
SIGURD MOIR.

It is well worth while to spend some little time in planning the production programme before commencing an overseas holiday. The following article will be found helpful in overcoming the more familiar difficulties and in ensuring satisfaction from the very outset.

I HAVE recently been corresponding with three readers of this journal on the subject of cinema holidays abroad. Briefly, information was required as to the most satisfactory type of film to make, the manner of satisfying Customs requirements, obtaining local assistance in certain phases of the work, and a number of less important matters.

All were agreed that they had no desire to waste good film on the meaningless travel "snapshot"; and this is heartening news, since the public screening of earlier "button-pressing" escapades of this type—despite excellent photographic quality in the images—has done nothing to indicate that in amateur circles there is any such thing as the film mind.

Casual Shots.

I do not say that all casual shots are valueless. What all cinematographers should remember is that many exotic scenes owe much of their attraction to such qualities as colour, vivid relief, sounds and sweet odours—most of which it may be impossible to render in the film. (The still photographer has long since felt the force of all this.)

One of these correspondents was opposed to spending his holiday on imitating what he called the "silly amateur playfilm." Well, one must candidly admit that playfilms are not everything; but, apart from this, it would be no easy task to film a photoplay during a three weeks' stay in Tangier (Morocco).

This narrows our field down to

documentary, continuity-travelogue and abstract treatments. Continuity-travelogue differs from the rather pointless "ciné-snapshotting," in that the film does not depend for its unity (!) on a number of explanatory titles which are decided upon after the shots have been taken. Here the titles—together with the rest of the essay—are planned before even an inch of film has been run off. Which is the only satisfactory way of making a good film.

Customs.

When he goes abroad, the cinematographer should have no difficulty whatever in taking away any equipment or materials that he may have in his possession. But he may require a covering document to facilitate the duty-free entry of such possessions on his return home. Apparatus and film made in Great Britain or Northern Ireland are, of course, regarded as being exempt from this requirement.

The necessary form, which has to be completed in duplicate, may be obtained from the Officer of Customs and Excise at the home port of embarkation and at certain airplane stations.

Readers who may have omitted to take out this form would probably be allowed to enter with their apparatus, etc., provided such were accompanied by a detailed invoice or receipt from the stores at which the goods were purchased.

Local Assistance.

Local assistance can be of tremendous value when working in entirely

unfamiliar surroundings. Unfortunately, such assistance is not always easy to obtain; though, in this as in most other matters, much may depend upon associations which the cinematographer is able to build up for himself. The world-wide amateur Cinema League, for example, has accredited representatives in many of the frequented parts of the globe.

Some organisations, like the C.S. Ciné S., have resident members in different parts of the Empire. And, of course, it goes without saying that the utmost help and assistance will always be forthcoming whenever cinematographers meet in outlandish parts.

On the subject of kits, there is no need to give a free advertisement to any of the excellent firms of suppliers who are able to advise on things that are worn and carried in the different holiday zones. But it is important for the cinematographer to take out as much film as he conveniently can when he goes abroad. In some places, 16-mm. stock is either unobtainable or obtainable only at some days' notice, whilst in other cases the worker may be asked to make use of out-of-date stock which has already spent no little time under tropical conditions.

Other information which may help in the planning of films as well as in the making of arrangements can be gleaned from the pages of a current guide. Travel and other books dealing with the location in question may also prove of much practical assistance; and these should be read in conjunction with the guide.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Readers are reminded that the latest day for sending in entries for The Royal Photographic Society's Annual Exhibition is Friday, August 10th. Entry forms and full particulars are obtainable on application to the Secretary, R.P.S., 35, Russell Square, London, W.C.1.

The Leicester and Leicestershire Photographic Society was founded in 1885, and will, in 1935, reach its Jubilee year. To commemorate this event in worthy fashion, special efforts are to be made with the Society's Annual Exhibition. This will again be run on international lines, and every effort is to be made to get together a representative collection of pictorial photography by the world's leading workers. Mr. W. N. Plant, of 30, Harrow Road, Leicester, is the Hon. Organising Secretary.

Secretaries of photographic societies and camera clubs are advised that Messrs. Johnson & Sons, of Hendon Way, Hendon, London, N.W.4, are again preparing to send out material and data for the following practical demonstrations: "Correct Development by the Azol Method," "Flashlight Photography," "After-treatment of the Negative," "Toning of Gaslight and Bromide Prints," "How to do your own Developing and Printing." Applications for these demonstrations should be made to the address given, with alternative dates.

A slow-speed attachment for the Leica camera has just been introduced by Messrs. Leitz. This little gadget screws on the release button of the camera and allows an exposure of a second, half second, quarter and eighth second to be made with any Leica Model II or Standard. It is easily attached and costs £2 16s.

The "hiking" photographer is now provided with a specially designed light tripod. This is called the "Hikepod," and is obtainable from Oskar Schiff, of 30, Fairfax Road, N.W.6. It is a well-made and useful article, resembling, when closed, a stout malacca walking-stick with crook handle, and as such it can be used when "hiking." For photographic purposes, the handle unscrews, and the malacca outer shell slides off, leaving a neat but substantial two-section telescopic metal tripod. This extends to 45 inches, and is strong enough to hold any medium-weight camera without vibration. As a two-purpose accessory the "Hikepod" should be very popular. Its price is 21s.

A change of Hon. Secretary is announced for the Ealing Photographic Society. Mr. E. S. Allwright, 3, Kerrison Lodge, 59, Warwick Road, Ealing, W.5, has been elected to that position.

The Exhibition of the Professional Photographers' Association will be held this year from September 5th to 29th. It will again be divided into two consecutive sections. The first will be of Industrial Photography, and will be open from September 5th to 15th. The second will be of Portraiture only, and will be opened on September 18th by the Lord Mayor of London. The last day for entries for both exhibitions is August 18th. Entry forms are now ready, and can be obtained with full particulars from the Secretary, P.P.A., Sundial House, 357, Euston Road, N.W.1.

We are asked by Messrs. Schering, Ltd., to draw attention to an error in their advertisement of the Voigtlander "Superb" Camera in our issue of 18th July. The model at £21 is fitted with Heliar f/3.5 anastigmat, and not f/4.5, as erroneously announced.

Roll film with the remarkable speed of 4,400 H. & D. (28° Scheiner) has now been put on the market by Agfa, Ltd. The high quality of the Agfa products are well known, and this firm has already been responsible for film of outstanding quality and speed. The latest Agfa fast Isochrom retains all the good features of the earlier Isochrom film: fine grain, good orthochromatic character, freedom from halation, and clean developing quality. The great speed of the new film is amply borne out by tests on difficult subjects, and it can be highly recommended for all phases of photography in dull or poor light. It is fast enough for snapshots indoors, and the highest speed work can be successfully undertaken with it out of doors. It is obtainable in all sizes in roll films and film packs.

An exhibition of Commercial Art, including that in which photography plays a part, has been organised by Messrs. Percy Lund, Humphries & Co., at 12, Bedford Square, W.C.1. Admission is free.

At the Watling Centre, Orange Hill Road, Burnt Oak, a new camera club has been formed under the name of the Watling Association Camera Club. The club meets every Thursday, and possesses facilities for a practical dark-room and lecture-room. The Hon. Secretary is Mr. A. J. Wainwright, of 234, Blundell Road, Edgware, Middlesex, and he will be glad to hear from anyone interested, particularly beginners.

An "A.P." reader, Mr. R. H. Bryant, of 83, South Side, Clapham Common, S.W.4, has had his camera, a Foth-Flex (lens No. 10738), stolen. Will anyone to whom this camera is offered inform the police immediately.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, July 31. Rules in this issue.
—Lucerne International Salon.—July 7–29. Secretary, International Salon of Photography, Lucerne.
Derby P.S. Jubilee Exhibition.—July 21–August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18–September 15. Application for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers, please copy.)

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Entries, July 28. Open, August 31–September 15. Further particulars from Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20–25. Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Open, August 24–September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Open, September 24–30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8–October 6; sending-in day, August 20; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6; sending-in day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26–September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowodarska 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotograafische Kring "Iris," Ballaerstr, 69, Antwerp, Belgium.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Fixing-Hardening Bath.

Will you give me a formula for a good acid fixing and hardening bath? J. A. W. (Mosmau.)

You should make up two solutions:

| | |
|-----------------------------|--------|
| A. Hypo | 5 oz. |
| Water to | 20 oz. |
| B. Sodium sulphite | 4 oz. |
| Glacial acetic acid | 3 oz. |
| Alum | 2 oz. |
| Water to | 20 oz. |

To make the working bath add 2 oz. of B to the A solution. In making up B you should dissolve the alum in part of the water and the sulphite in another part. Add the acid to the sulphite when dissolved, and then add the alum solution.

Photographing Birds.

What type of camera would be suitable for photographing birds in flight at 6 ft. and upwards? A reflex would not be suitable as there is no time for focussing. Size of photograph is not important, but a bulky camera is undesirable. Roll film is probably simpler than plates or film pack. G. H. L. N. (Wendover.)

You are setting yourself a very difficult task in attempting to photograph birds in flight at a distance of 6 feet or even considerably more. Owing to the limitations you impose we should say that your best chance would be with a camera of the so-called Press type, with a direct-vision finder, a large-aperture lens and a focal-plane shutter. A large-aperture lens would certainly be necessary for such brief exposures as would be required, and this imposes the necessity of very accurate focussing, as the nearer the object and the larger the aperture the less is the depth of definition. With the type of camera suggested it is more usual to use single dark slides and plates, especially as you have more choice of variety with plates than with films. We have not heard of any outfit that would make such work easy and certain.

Intensification.

Is it possible for the enclosed negatives to be intensified? H. C. R. (Tottenham.)

Intensification will only strengthen an existing image, and cannot possibly create one from nothing. The films you send are not negatives in the ordinary sense at all, and they are absolutely useless. We know nothing about the exposures given, but these were obviously totally inadequate. We imagine that you gave "snapshot" exposures in an impossible light. Why not use an exposure meter to save you from such errors?

Grain in Enlargement.

I enclose an enlargement from a negative on Verichrome film. Can you explain the mottled effect? A. J. M. (Hale.)

The Verichrome film has a matt surface like finely-ground glass, and the grain of this will show when the negative has a considerable degree of enlargement through a condenser with undiffused light. It is necessary in these cases to have the light properly diffused. We make many enlargements from Verichrome negatives, and find them quite satisfactory in every way.

Competition Prints.

I am told that prints for your competitions must be printed only on vigorous glossy black and white, and not on cream-tinted paper. Is this so? K. G. (Leatherhead.)

Whoever gave you the information about the competition prints certainly had no authority for making any such statement. A print for competition purposes should be made on the paper that does it most justice, and we have prints by practically every printing process known. Certainly a print which showed falsified tones owing to the use of too vigorous a paper would stand no chance of an award.

Stained Film.

Is there any rapid method of removing the pink stain on the enclosed film? H. R. (St. Helens.)

All such stains as that to which you refer generally disappear in the fixing bath, provided this is of the acid type. They may be unaffected by plain hypo. Any slight coloration which does not disappear in the fixing and subsequent washing may safely be ignored.

Aerial Photographs.

I wish to make some aerial photographs of the type enclosed. Is a miniature camera suitable? If not, what do you suggest? I want a camera for general work as well. Should panchromatic films be used, with a green filter? Should I use full aperture, or should I stop down? Are there any other special points to be considered? F. A. B. (Chelmsford.)

The subject of aerial photography is not one that can be dealt with in the form of answers to questions. Such photographs as the one you send are the work of experts, who use the most suitable apparatus for their purposes, and do not expect their cameras to be equally suitable for general work. As a rule panchromatic material is used, but not always with the same type of filter. The stop you use depends upon all sorts of circumstances, which cannot be entered into in a brief manner. If you communicate with Messrs. Sands Hunter, Ltd., of 37, Bedford Street, Strand, London, W.C.2, they will send you a catalogue of books, in which you will find one or two on aerial photography. The fact that two of them cost 25s. each should be sufficient indication that the matter is not one to be dealt with by question and answer.

Making up M.Q.

In the following M.Q. formula in what order should the ingredients be dissolved? C. R. (Richmond.)

It is usual in quoting formulæ to name the ingredients in the order in which they should be dissolved, which is not the case in the one you give. We advise metol, sodium sulphite, hydroquinone, potassium bromide, sodium carbonate.

Fixing-Hardening.

Can you give me a formula, not including alum, for a bath that will fix and harden negatives and prints? P. J. (Worthington.)

The following is recommended:

| | |
|----------------------------------|-------------------|
| Hypo | 4 oz. |
| Water | 20 oz. |
| Potassium metabisulphite | $\frac{1}{2}$ oz. |
| Formalin | $\frac{1}{2}$ oz. |

Stop Markings.

I have an old Goerz lens on which the diaphragm numbers are 4, 6, 12, 24, 48, and 96. Are these f/ numbers? R. E. (Bideford.)

No. You may regard them as representing the f/ numbers 6.3, 7.7, 11, 16, 22 and 32.

Ownership of Negative.

If I pay a professional to take my portrait, and buy the prints in the usual way, am I entitled to the negative as well? B. F. J. (Bow.)

No. The negative remains the property of the professional, although he may not use it for making further prints without your consent.

The Amateur's Emporium

Prepaid Advertisements.

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less 1/
1d. for every additional word.

PROFESSIONAL AND TRADE—

12 words or less 2/6
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed**

Notes being untraceable if lost in transit should not be sent as remittances.

CAMERAS AND LENSES

MIROFLEX 9×12 cm., 12 single slides, F.P.A., yellow filter, sun guard, f/4.5 lens, velvet-lined leather case; new condition; cost £51/10; price £26.—Hussey, Crossways, Kingwood, Oxon. [2838]

GRAFLEX 4-pl., Kodak f/4.5, 1/10th to 1/1,000th sec., 2 slides, roll-film adapter, £4, will exchange.—Carpenter, 37, Southend Rd., Beckenham, Kent. [2892]

DAMS 3½×2½ Minex Reflex, Zeiss lens f/4.5, leather case, F.P.A.—Below. [2892]

41×3½ Manufoc Tenax, f/4.5 Goerz lens, 6 slides, F.P.A., and case; as new; what offers?—Chilcott, Paxton Terrace, Swansea. [2897]

GRAFLEX 3½×2½, f/4.5, double slide, R.F. holder, F.P.A., case, £8/10; wanted, Miniature camera.—Case, 571, Gloucester Rd., Bristol. [2945]

£26 Sanderson's 5×4 Hand-Stand; Adverts £7, mine £3/3.—475, Southwark Park Rd., Rotherhithe. [2946]

2-15/16×1½ Ermanox, f/1.8 Ernstar, 3 slides, F.P.A., case, new and unused, £14.—Below. [2946]

31×2½ Tropical Nettel Deckrullo, 12-cm. f/4.5

32 Tessar, 3 double slides, F.P.A., case; excellent condition, £10.—Below. [2946]

6×13 Ica Polyscope, stereo and panoram, 9-cm. f/4.5 Tessars, changing-box, F.P.A., printing frame, 2 cases, as new, £12; Justophot Meter, new, instructions, case, 10/-; deposit system.—Bowyer-Lowe, 24, Sussex Square, Brighton. [2947]

IMPORTANT NOTICE

Owing to the August Bank Holiday, the issue of "THE AMATEUR PHOTOGRAPHER AND CINEMATOPHGRAPHER" for August 8th must be closed for press earlier than usual.

MISCELLANEOUS ADVERTISEMENTS for insertion in that issue can be accepted up to **FIRST POST, THURSDAY, AUG. 2nd.**

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

GOERZ Tenax Folding Pocket Camera, 3½×2½, double extension, fitted Goerz Dogmar f/3.5, Compur shutter, 6 slides, F.P.A., cable release, hood, leather case; excellent condition, £6.—Harrison, Reculver Drive, Beltinge, Herne Bay. [2948]

1-PLATE Goerz Anschütz, latest model, f/3.5 4 Tessar, 6 double slides, leather case, £16; 1-pl. New Ideal Sibyl, f/4.5, complete outfit, £7/10; two Proxars, 1 filter for f/3.8 Automatic Rolleiflex, 25/-.—White, 219, Carnwaddie Rd., Thornliebank, Glasgow. [2950]

ROLLEIFLEX, f/3.8 Tessar, with case and lens hood, pre-automatic model; most carefully used; in really excellent condition, £12.—W. Oliver, Cafe Victoria, Market Place, Ripon. [2951]

ROLLEICORD, with ever-ready case, Zeiss Protar lens, filters, lens hood, iris focus, and exposure meter, Correx tank; cost £16/10; as new, £12.—Borthwick, 75, Mayfield Rd., Edinburgh. [2952]

1-PLATE Lancaster Field, patent Rectigraph lens, 4 also Ross Symmetrical 4-in. W.A., tripod, canvas case, 22/-; 1-pl. Coronet Electric Enlarger, complete with Petzval lens, 39/-; 3½×6½ Stereo Reflex, pair f/6.3 Homocentric 5-in. lenses, Mackenzie daylight slide, 12 envelopes, requires adjusting, 38/-; deposit system.—T. Noblet, Blackmore Farm, Ashburton. [2954]

31×2½ Zodel, f/4.5, Compur, double extension, rising, cross front, slides, F.P.A., leather case, self-timer, £4/10; 1-pl. Klimax Tank, 7/6.—Stockton, 25, Barlow's Lane, Hazel Grove, Stockport. [2955]

VERY PLEASED
INDEED—Is This Customer

SEE WHAT HE WRITES:—

"I have tried the new 'Norfolk' out under varying conditions, and am completely satisfied with it. The definition of the lens is really excellent, and the whole camera is most beautifully constructed, all movements being smooth and accurate." R. W. (Chesterfield.)

The NEW
NORFOLK

From an actual photograph. Manufactured specially for the Sheffield Photo Co., Ltd., by Gebrüder Wirgin, Weisbaden.

3½ × 2½ Plate & Film Pack Camera

F/3.5 ZERANAR Anastigmat Lens (4½-in. focus), **COMPUR** delayed-action SHUTTER.

This is a precision instrument constructed of a light alloy, strong, but of very superior finish. Rising and cross front, both actuated by micrometer movements. Clear and direct vision view-finders.

The Zeranar lens gives very critical definition and is equal to most lenses at double the price. Price only **£6:15:0**

(Nine equal payments of 15/9), including 3 Slides. Film Pack Adapter 6/9. Extra Slides 1/9. Best Leather Case 15/-.

Fitted with Meyer Trioplan f/2.9, £11 5s.

Best Allowance for your present apparatus in Part Exchange.

You take pictures on

"PANATOMIC"

SO FAR as sheer beauty and brilliance of tone distinguish 'pictures' from 'snapshots,' "Panatomic" gives you

a *picture* every time. Fine detail, subtle gradation, pearly high-lights, soft shadows—those characteristics that collectively make up 'quality'—are present in every negative on "Panatomic" Film.

The new emulsion makes the difference. "Panatomic" is a fully *Panchromatic* film of almost *Atomic*-fine grain (that makes it superb for enlargements). And it is fast; double-coated; anti-halation backed.

"Panatomic" has all the virtues. Use it for your finest work.

"PANATOMIC"

VOL. LXXVIII. VOL. 2386.

READERS whose holidays are yet to come should not overlook the arrangement made with the Holiday Club which we announced in a recent issue. The Holiday Club will supply information and advice on accommodation and beauty-spots and interesting objects. The membership fee to the Club has been waived in the case of "A.P." readers, who will be made Honorary Members and receive the information on request. Application should be made in the first instance through "The A.P." The information supplied by the Holiday Club has recently been revised, and brought up to date with the help of the authorities of the districts concerned. The Holiday Club is also promoting a photographic competition in which it is possible to earn a fortnight's holiday for two, not only without cost but with a £5 note for expenses. "A.P." readers will be eligible for this also.

Sheer Luck.

A lady on her recent holiday in Switzerland used her camera with a recklessness which we have never seen equalled. She did not appear to pay any attention to light, pose, composition, or anything else, but snapped away at random without care or compunction. On her return she sent us some of the results in which we had a personal interest, having ourselves been in the line of her erratic fire. She did not send us all of them, for some she had had to destroy, and we were left to speculate on what the destroyed ones were like after endeavouring to make out whether some of the others meant anything at all. Nearly all were lamentable, offending the most elementary canons. But among the rest there was one, taken on a boat on a Swiss

TOPICS of the Week

SEASIDE JOYS.

A typical seaside holiday action subject within the range of any type of snapshot camera—if taken at this angle.

lake, against which the most fastidious critic could urge no complaint. It was just perfect in its way. The exposure must have been right, the lighting as it should be, and in the placing of the figures and in the atmosphere and emphasis a master hand could have done no better. It was indubitably her own, and she had taken no more care over it than over the others. It seems as if, in photography as in other things, there is a divinity that shapes our ends, rough-hew them how we will. Though it is not well to rely on divinity too often to do our work for us. Heaven (usually) helps those who help themselves, but sometimes it helps those who do not.

Immobility in Bird Photography.

One of the cleverest photographers of birds and animals to-day is Miss Frances Pitt, whose weekly illustrated articles on natural history have for a long time been featured by one of the leading London evening newspapers. Miss Pitt has just published a book ("The Naturalist on the Prowl") in which she gives much valuable advice on observing and photographing birds and animals. In the early days of bird photography it was often thought advisable to disguise oneself as a cow or a tree when taking close-up pictures of birds and certain nervous animals. While such aids are not to be despised it is pointed out that experience has shown that not camouflage, but immobility, is the essential condition for success. Most bird-lovers know that when a person stands perfectly still birds seem to take no notice, and will often perch and feed in easy reach of a cautious observer. The aim of the photographer of birds, therefore, should

be to make an exposure without any visible movement of self or camera. Another point worthy of note is that when a "hide" is used, a friend should be with the photographer to leave it ostentatiously so as to deceive the bird. Presumably birds cannot count; they may see two persons enter a "hide," but when one leaves it they seem to lose their nervousness.

Pictures Without a Camera.

We are sometimes told by writers of books on photography to be always composing pictures as we walk abroad, even though we have no camera with us. We wonder whether this is really feasible advice.

It is sometimes said that the sportsman sees his best quarry when he is out without a gun, and, on that analogy, a photographer should discover his best pictures when he has no means of recording them. And yet, somehow, we doubt it. We are inclined to think that in some curious psychological way the carrying of a camera leads to the discovery of subjects which otherwise the eye would never see. It is having the instrument to hand which just gives the necessary mental or emotional—or should it be perceptual?—click. Commonly we do not think enough of the psychological help our instruments give us when taking our walks abroad.

Events Abroad.

An American magazine, published in New York, and appealing entirely to Americans, publishes monthly the forthcoming events in old Europe which would be likely to interest American sightseers. Among those listed for England we catch Widdecombe Fair, the celebration of Dr. Johnson's birthday, the Ram and Cheese Fair at Northampton, the old custom of clipping the church at Painswick, near Stroud, the Highland games at Oban, the Rood Fair at Dumfries, the Goose Fair at Tavistock, and the Mop Fair at Stratford-on-Avon. How many of these have you seen? The visitor often sees more than the native.

"The Amateur Photographer" EXPOSURE TABLE—August

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m. double these exposures. From 6 to 8 a.m. or from 4 to 6 p.m., treble them. From 5 to 6 a.m. or 6 to 8 p.m., about four times these exposures will be required.

N.B.—The times given above are by "sun time." The exposures, therefore, which are laid down as suitable for 2 to 4 p.m., for instance, will be those to be given between 3 and 5 p.m. by the clock, during "summer time."

| SUBJECT. | Ordinary. | Medium. | Rapid. | Extra Rapid. | Ultra Rapid. |
|---|-----------|-----------|-----------|--------------|--------------|
| Open seascapes and cloud studies | 1/30 sec. | 1/45 sec. | 1/90 sec. | 1/120 sec. | 1/150 sec. |
| Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes .. | 1/18 " | 1/30 " | 1/50 " | 1/70 " | 1/90 " |
| Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes | 1/10 " | 1/15 " | 1/30 " | 1/40 " | 1/50 " |
| Landscapes in fog or mist, or with strong foreground, well-lighted street scenes .. | 1/8 " | 1/12 " | 1/25 " | 1/30 " | 1/40 " |

| Portraits in well-lighted room, light surroundings, big window, white reflector .. | 4 secs. | 3 secs. | 1 1/2 " | 1 " | 3/4 " |

As a further guide we append a list of some of the best known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

| Ultra Rapid. | | Rapid. | |
|--------------------------------|-------------------------------|--------------------------------------|--------------------------|
| AGFA, Special Portrait. | ILFORD, Golden Iso-Zenith. | BARNET, S.R. Pan. | BARNET, S.R. |

The Exhibition Print

The following article offers suggestions to those photographers who are intending to submit prints to the selecting committees of the R.P.S. and The London Salon of Photography.

IT is the ambition of most serious photographers to have their work accepted at one or other of the leading exhibitions of pictorial work. There can be no better test of the photographer's ability and progress than regular acceptance of his work by the selecting committees of either The London Salon of Photography or the pictorial section of the Royal Photographic Society.

The time for the submission of entries to these important shows is now drawing near, and the photographer who wishes to send in his best prints for consideration has no time to lose. Hurried work is fatal to success, and there is the further disadvantage that the photographer has not the same opportunity of judging the final result that he would have if the work were done in good time, and any suggested modifications put into effect.

The Subject.

In order to be successful in any high-class exhibition the photograph must display originality. It may be that the photographer finds an original subject that has not been treated before, or he may be able to express an old theme in a fresh manner. The personal factor counts for a very great deal in these days, when the selection committees have a large number of entries submitted of a very high standard. Hackneyed subjects, even if well done, are seldom certain of acceptance in the leading shows.

There are two courses open to the photographer who wishes to produce an exhibition picture. He can examine his stock of negatives and select the best, or he may go to the trouble of finding new subjects specially for the purpose. Either course has advantages, but the latter is productive of the better results, in that the photographer is all the time working towards a predetermined end.

Technique.

It need hardly be said that perfect technique is of the very first importance. Although the selecting committees are in the main concerned with the artistic rather than the technical side, they have so much good work to select from that any which fails on this score will be rejected. Further, only by perfect technique will the photographer be able to express the ideal.

If bromide papers are used the photographer will be well advised to use only papers of the very first grade, and of a base and surface that will assist the subject and enhance the effect to be conveyed.

The exhibition print must be of good colour, and it may well be of rather stronger character than when intended for home decoration. The reason for this is that a print loses something of its depth when in the strong light of a gallery. A good test in this respect is to examine the print in the open air in bright light.

Sizes.

Although in these days large prints are in favour the photographer may be cautioned against making prints larger than the negative will produce without marked loss of quality. Size is not in itself a merit, and too great enlargement may bring into evidence points which may escape attention in a print of smaller size. This is of special importance in these times when very small negatives are the rule. We see many pictures at exhibitions which are obviously over-enlarged.

Trimming and Mounting.

Having made the print it should be trimmed to the best advantage by the aid of masking with two L-shaped pieces of card, until the subject is seen at its best. A certain amount of trimming may be done while the print is being made by using only the selected

part of the negative, but there are still the final proportions to be decided before it is mounted.

Mounting should be done carefully. Gone are the elaborate "multiple mounts," which in past times competed with the print for attention, often successfully, but many exhibition prints leave much to be desired in this respect. Sizes are standardised, and white or very light mounts are generally suggested, but this does not mean that any odd piece of thick card will do, or that all the photographer need to do is to stick the print down. (Some photographers fail to do this satisfactorily, by the way.)

The choice of a mount, suited to the subject by its tone and texture, is a point that should not escape attention in the final stages in the production of the exhibition print. It is a good plan, having made and mounted the print, to place it in a narrow frame for protection, and to live with it for a week or so. This will in effect show the observant photographer whether it is as good as he was inclined to believe when the print was first made. This is why we suggest making the print as soon as possible, well ahead of the sending-in day.

Sending In.

Lastly, the entry form should be filled up accurately, after the conditions have been carefully read. Good work has been put at a disadvantage before now because some condition was not complied with.

An important point is that the prints should be well packed so that the selectors have the opportunity of seeing them at their best. Bad packing can only result in the prints reaching their destination the worse for the journey. Finally, the parcel should be sent off in good time, properly addressed, in order to ensure that it will be delivered at least the day previous to the closing date.

YACHT Photography

By ROBERT FERGUSON.

A PART from the great annual yachting festival at Cowes next week, the numerous sailing clubs on the rivers and around our coastline will provide the enthusiast with ample material for yacht photography during the whole of August.

The subject is one in which the novice in photography has every chance of securing good results, the lighting conditions being entirely conducive to well-exposed negatives.

It is also a branch of photography very suitable for the advanced worker, who will find much material of a pictorial nature in the portraying of these beautiful sailing craft.

To obtain the best yacht pictures the photographer will usually have to be afloat, as it is seldom that a reasonably large size image can be obtained from the land. If permission to be on the flagship during a regatta can be obtained, good pictures of the start and finish of the various classes can be made. Rowing and motor boats are also very useful vantage-points from which to make exposures. The tendency to unsteadiness when working

The Start.

The Winner.

Running for the Mark Buoy.

from a boat is easily overcome with a little practice.

The moment to make an exposure in rough weather is when the craft you are in is at the top of a wave. This is not at all difficult to manage after a little practice, and, in addition, if a deep breath is taken, and held whilst the exposure is made, a perfectly sharp negative should be obtained.

It will be found that photographs of yachts taken from small boats are usually more graceful than those taken from a higher position; the lower viewpoint also gives a better action picture.

For this class of work a lens hood will be found necessary, to cut off the large amount of reflected light which is so much in evidence on the sea. When photographing a yacht broadside on, it should be remembered that a fast shutter speed will be called for if the boat is near. On the other hand, craft going away from or coming towards the camera do not need such a quick exposure.

If not used to this branch of photography the photographer is rather apt to over-expose. This fault should be guarded against, as over-exposure will mean the loss of cloud effects.

Development of the film or plate should not be carried too far, the aim being to obtain a negative on the thin side.

The accompanying photographs were taken with an old-fashioned box camera. The plates (anti-screen) were developed by tank with Azol developer. The exposures given were 1/100th sec. at f/11.

YOU CAN ALWAYS DO BETTER AT

The WESTMINSTER

LONDON'S MOST POPULAR DEALERS!

THE ROLLEICORD

A Low-priced Reflex.

12 pictures $2\frac{1}{2} \times 2\frac{1}{2}$
on Standard $3\frac{1}{2} \times 2\frac{1}{2}$
Roll Film.

£10:10:0

Nine monthly payments of 24/6.

F/4.5 Zeiss Triotar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B.

THE DEKKO CINE CAMERA

for 9.5-mm. films. British Made.

20-mm. f/3.5 Dallmeyer anastigmat (fixed focus), interchangeable screw-in lens mount. Variable speeds, half to normal and slow motion, 64 pictures

per second, single-picture device, spring drive, taking through full 30 ft. of film at one winding, telescopic type finder. Body of special wear-resisting bakelite. All outside fittings and film gate chromium plated. **£6:6:0**

Fitted 1-in. f/1.9 Dallmeyer anastigmat, micrometer focus... **£8:18:6**

Nine monthly payments of 20/10.

THE WESTMINSTER SUPER SPORT

Takes 16 pictures on standard $2\frac{1}{2} \times 3\frac{1}{2}$ Roll Films.

Also $4\frac{1}{2} \times 6$ cm. Plates and Film Packs, and 6×6 cm. pictures on $2\frac{1}{2} \times 2\frac{1}{2}$ Roll Films.

Fitted f/3.5 Meyer Trioplan anastigmat, in delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B., all-metal, leather covered body. Self-erecting front. Interchangeable lens mount, direct-vision finder. Clip-on fitting for slides and focussing screen. **£10:0:0**

Nine monthly payments of 23/4.

Fitted f/2.9 Meyer Trioplan anastigmat, in delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£11:4:0**

Nine monthly payments of 26/2.

(Write for Leaflet.)

THE FOTH-FLEX

A focussing lens reflex with focal-plane shutter.

£10:7:6

Nine monthly payments of 24/3.

F/3.5 Foth anastigmat, focal-plane shutter, speeds 1/25th to 1/500th sec., Bulb, special attachment for delayed action. All-metal body, deep focussing hood with magnifier for fine focussing.

The "ALEF" CINÉ CAMERA

F/2.8 Meyer Trioplan anastigmat, fixed focus, interchangeable lens mount, 7 speeds, 5 to 32 pictures per second, spring drive, taking 30 ft. of film, telescopic type finder, all-metal body. **£11:17:6**

Nine monthly payments of 27/9

The New Pathscope MOTOCAMERA

Multi-Speed Device.

Waist-level finder, end-of-film indicator. Fitted f/2.5 anastigmat, and $\times 4$ Telephoto attachment, spring drive, takes 30 ft. of film **£22:0:0**

Nine monthly payments of 51/4.

SPECIAL OFFER!

MODEL 4 ENSIGN KINECAM

16-mm. Sold under Maker's Guarantee.

Cost **£10:10:0** NOW **87/6**

(British made.) Takes 50 ft. of film, daylight loading.

20-mm. f/3.5 Taylor-Hobson Cinar anastigmat, fixed focus, 2 film speeds, 8 and 16 pictures per sec., all-metal body, finished in black ripple enamel with exposure table attached. Telescopic type view-finder. Spring drive, taking 20 ft. of film at one winding. Solid leather carrying case, 10s.

THE NEW AGFASPEEDEX

(Takes Standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Films.) Only 6 Guineas.

Nine monthly payments of 14/7.

F/4.5 Agfa anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B., brilliant reversible and optical direct finders, self-erecting front, all-metal body, hinged back, special type safety window device for Panchromatic films.

LIBERAL EXCHANGE ALLOWANCES.

THE WESTMINSTER PHOTOGRAPHIC EXCHANGE, LTD.

119, VICTORIA STREET, VICTORIA 0669. S.W.1

24, CHARING X ROAD, TEMple Bar 7165. W.C.2

111, OXFORD STREET, GERRard 1432. W.1

62, PICCADILLY, W.1 REGent 1360.

The ROLLEIFLEX

ABSOLUTELY AUTOMATIC

12 pictures $2\frac{1}{2} \times 2\frac{1}{2}$ on standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Film.

Fitted f/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B.

£20:0:0

Nine monthly payments of 46/8.

Fitted f/3.8 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B.

£22:10:0

Nine monthly payments of 52/6.

The "MILLER" CINE CAMERA

For 9.5-mm. Films.

BRITISH MADE.

F/3.5 Dallmeyer anastigmat, fixed focus, interchangeable lens mount, 5 speeds—8, 12, 16, 24 and 32 pictures per second. Spring drive, taking 30 ft. of film, telescopic type finder, leather covered body, fittings chromium plated. **£10:10:0**

Nine monthly payments of 24/6.

Fitted f/1.5 Dallmeyer Speed anastigmat, in focussing mount. **£16:10:0**

Nine monthly payments of 38/6.

The ZEISS IKON SUPER IKONTA

The Camera that does the focussing.

No. 530. Takes 16 pictures on standard $3\frac{1}{2} \times 2\frac{1}{2}$ roll films. Fitted f/3.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B., self-erecting front, built-in range-finder, ensuring critical focus for every picture. **£16:12:6**

Nine monthly payments of 38/10.

Takes 8 pictures $3\frac{1}{2} \times 2\frac{1}{2}$ or 16 pictures $2\frac{1}{2} \times 1\frac{1}{2}$ on standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Films.

Fitted f/4.5 Zeiss Tessar anas., delayed-action Compur shutter, speeds 1 to 1/250th sec., T. & B., self-erecting front, built-in range-finder, ensuring critical focus for every picture. **£17:0:0**

Nine monthly payments of 38/8.

For pictures $4\frac{1}{2} \times 2\frac{1}{2}$ or $2\frac{1}{2} \times 2\frac{1}{2}$.

F/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/250th sec., T. and B. **£18:15:0**

Nine monthly payments of 43/9.

The "WELTA PERFECTA" A TWIN-LENSES FOLDING REFLEX.

£13:10:0

Nine monthly payments of 31/6.

Fitted f/3.5 Meyer Trioplan anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B., f/3.5 Trioplan, focussing lens, lever focussing, metal focussing hood, fitted with magnifying lens for sharp definition. Takes 12 pictures on standard $3\frac{1}{2} \times 2\frac{1}{2}$ roll film. (Write for leaflet.)

PERNOX

ROLL FILMS & FILM PACKS

H. & D. 2700.

Pernox film represents the result of long years of scientific research. The speed is such that instantaneous snapshots are possible in dull weather, even with cameras fitted with slow lenses. Pernox film is highly orthochromatic, has excellent gradation and wide latitude of exposure, and does not require any special treatment in development; completely antihalo; extraordinarily fine grain.

REDUCED PRICES:

8-exposure spools

$3\frac{1}{4} \times 2\frac{1}{4}$ 1/2

$4\frac{1}{4} \times 2\frac{1}{2}$ 1/6

Price list of films and Zeiss Ikon cameras free on application.

ZEISS IKON L^{TD}

11, Mortimer House, Mortimer Street, London, W.1

12 pictures on 8-exposure
 $3\frac{1}{4} \times 2\frac{1}{4}$ roll film for 1/-.
With f/4.5 Zeiss Triotar
lens, only.... **£10:10:0**

Supplied in a unique patented
leather case for 2/- extra.

ALL GOOD DEALERS STOCK THE ROLLEICORD

LONDON, W.C.1

You've forgotten your..

Rolleicord

Whatever you do don't forget to take a Rolleicord with you on holiday. It's the camera you've always longed for—built on the lines of the Rolleiflex, it is a really high-class roll-film mirror reflex at a popular price. Because of the separate finder lens, the focussing hood, the Compur shutter which is set and released in one-lever motion, and the f/4.5 Zeiss Triotar taking lens, it will give you better holiday pictures than you've ever had before. Other features include—full compensation for parallax, round focussing knob with meter scale always in ready position, frame finder for sports pictures, rigid focussing, patented film guide. Never before has it been possible to build such wonderful features into a camera at such a low price.

The Camera at an Agricultural Show

By R. C. B. GARDNER.

An agricultural show offers the amateur photographer a unique opportunity of trying out almost every branch of the art, from landscape to interior, from portraiture to high-speed work, all within the compass of a couple of days and a few acres of space. It was only when looking through a miscellaneous collection of photographs taken at the principal shows during the last four years that I realised how wide a field of photography I had been playing in, and I am led to offer the hint to readers who may visit an agricultural show during the present summer.

All my photographs have been taken with a $3\frac{1}{2} \times 2\frac{1}{2}$ folding film camera, and although most of them have been of exhibits in the forestry sections of the shows, and have been necessarily very much of the order of close-ups, I have had remarkably few bad, or even indifferent, results.

As to the opportunities offered by a show, not only to secure "memory" pictures, but also pictures which may quite possibly be saleable. The newspapers seem to have a partiality for photographs of pigs, especially if the pigs be doing something unusual, such as leaping from their sty, or eluding capture by discomfited humans.

The day before the show opens is the time to get the best pig photographs. By wandering round the stockyard in the evening, you can see pigs of all kinds and sizes—fat sows, huge tusky boars, small piglets—being scrubbed, combed and generally groomed to make them fit to enter the judging ring the next morning. The sight of a freshly lathered boar, breaking away from the helpless "barber," whom it has probably knocked over, is too good not to risk a shot on, even though your shutter may be set at only $1/25$ th sec., and the lighting conditions not of the best.

Then, early on the morning of the first day comes the judging of all kinds of stock, and you can get bulls, cows, goats, sheep and pigs, either singly or in procession to and from the judging rings. Later in the morning the judging of hunters and polo ponies in the large ring gives ample opportunity for action photographs of horses, and further opportunity for this high-speed work will come with the jumping competitions; especially, perhaps, in the ever-popular children's pony classes. And the musical rides, jumping displays and trick riding by cavalry or mounted police must not be forgotten.

Do not forget the "side-shows"—the rural crafts such as basket-making, clog-making, pole-lathe turning, etc., many of which provide interesting and useful photographs if you know anyone writing articles on these crafts. Many of the crowd will be worth an exposure—the herdsmen, the smiths, the shepherds and stockmen, and the countrymen and their families for whom the local show is the great day of the year.

Even telephotography can have a look-in, for, given a place by the ring-side facing the grand-stand, there should be opportunity for a telephoto of the various notabilities usually to be seen in the president's box on the first afternoon of the show.

As for interior work, in the covered buildings, some interesting photographs can be taken which may come in handy for making lantern slides and for illustrating articles on timber, various arts and crafts, soil science, animal and plant diseases, etc. The light is usually good, for the roofs are as a rule either of corrugated iron lit by glass lights, or of a fairly transparent canvas. I find I get perfectly satisfactory negatives in anything but very bad light by giving one second with $f/8$, using Selochrome film with Ilford Alpha filter.

"DIN"

AMATEURS who purchase plates or films of German manufacture will notice an innovation in the marking of the speed on the carton containing the material. In addition to Scheiner and H. & D., both of which are well known, a third, "DIN," has now appeared.

This latter is certainly the most reliable method of the three, as the measurement is carried out by means of apparatus which must comply with certain definite stipulations laid down by the "DIN."

These initials are those of the German Standards Association, which corresponds to the British Standards Institution in this country. The "DIN" is officially recognised, and the use of its initials together with false information is a punishable offence.

It is as well at this stage to repeat what has already been said by many others—viz., it is quite impossible to compile a table giving comparative values for the three methods. There are fundamental differences in the methods of measuring the sensitivity, and consequently materials possessing the same "DIN" number can have different values if tested by either of the other two methods.

In the case of the two older methods, different manufacturers use different measuring apparatus, with the result that it would be possible for them to differ among themselves with regard to the same material.

The original methods invented by Scheiner and Hurter and Driffeld did not take into account the characteristics of modern high-speed plates and films; consequently,

manufacturers have been compelled to devise means of their own.

Neither method allows for orthochromatism, and under certain circumstances, a film or plate with a certain number may be more sensitive than one with a higher figure. In both these systems, the readings from which the speed numbers are deduced are taken from the threshold value and not from the "printable" value of the darkening of the emulsion.

In the case of the H. & D. scale, the sensitivity is directly proportional to the number, but in the case of both the German systems the scale is a logarithmic one. An increase of 3° Scheiner or $\frac{3}{10}$ "DIN," denotes that the sensitivity is doubled.

The following is a rough outline of the method used for the determination of "DIN" values. The apparatus used is provided with a standard lamp so arranged that a light equivalent to that of the midday sun falls on the material under test. This material is screened from the light by a glass plate on which is engraved a scale consisting of a series of steps each denser than the preceding one.

After the material has been developed in a specified manner, the image of the scale is compared with a standard scale, and the reading just below that which gives an exact match is chosen as representing the speed figure.

Exposure meters, especially those of the photo-electric cell type, graduated in "DIN" degrees are already on sale on the Continent, and will probably be available here within a short space of time.

H. J. H.

The Magic

*The Danish 4-masted schooner, "Svenborg," leaving Douglas.
(End of Breakwater on right.)*

If you, dear reader, should happen to be one of those amateur photographers who can never make up their minds where to spend their annual holiday until the last possible moment, I can give you a tip. Stop worrying and poring over guide-books to this resort or that, trying to decide which really is The Queen of Watering-places. Go to the Isle of Man.

If, on the other hand, you are one of those fortunate, methodical individuals who love to have everything planned, mapped-out, cut-and-dried, weeks—even months—ahead, the same friendly tip holds good. Go to the Isle of Man.

Mona, The Magic Isle, will welcome you both (and all others in between, whatever your type!). She will entertain and refresh you, enchant you with her countless moods, lure you back again and again to her hospitable shores with that indefinable witchery which is her own especial secret, and you will have the very finest photographic holiday of your life, whatever your ideal holiday may be. A tall order that, you say. Maybe it is. But the Island lives up to it, fully. If you have already been there you will know I speak truth.

Subjects abound on all sides for the holiday-maker with a camera, and for the more advanced worker who

wishes to get in some serious pictorial work there are countless lovely "bits" to challenge the eye for pictures. But if your fancy should happen to run to wide, spreading vistas under majestic skies you will find them, too, in Mona, easily.

You will probably land at Douglas (most people do), but your holiday headquarters will most likely be one of the outlying towns or villages strewn all over the island; or maybe a farmhouse "miles from nowhere." You will not have the slightest difficulty in finding whatever accommodation you require for yourself and your family (if any). And if you should—unluckily—

A Manx trout stream.

A cottage in the woods near Douglas.

strike a wet day or two, well, Douglas, with its cinemas, theatres, shops, ballrooms, etc., will be only a bus ride away.

Pictorially the island is a perfect little cameo of practically every type of scenery to be found in the British Isles. You can find Scottish moorlands, English downlands, rivers and coast scenery, Welsh mountains, Irish curraghs; all in miniature, and all compressed into the one Magic Isle about thirty miles long by twelve wide.

ISLE

By J. THORNTON.

The light almost rivals that of Hollywood for clarity and brilliance (perhaps because the whole Irish Sea acts as a gigantic reflector). For this reason panchromatic films and plates can be used with a filter to the greatest advantage. This quality of the light is also an advantage to the amateur equipped with a cheap camera and small-aperture lens. He can always be sure of well-exposed negatives inland as well as on the coast. With the modern high-speed material, exposures can be cut to a minimum. Practically every make and variety of film and plate, etc., can be obtained on the spot,

A harvest vista in the Isle of Man. Taken from The Braaid, looking north, over "The Plains of Heaven."

At Intebreck, I.O.M.

so there is no need to carry an extensive supply.

Almost every part of the island is easily accessible by bus, train, charabanc, or electric railway. But if you own a road vehicle of any sort (lordly Rolls or humble "bike") bring it with you. You will find yourself in dozens of lovely spots which public service vehicles cannot reach.

Wherever you live you can reach the Magic Isle easily and cheaply (by air—the modern magic carpet—if you wish). The Official Guide will give you full details of routes, sailings, accommodation, etc. It will also give you particulars about the annual photographic competition which, if you should happen to be one of the lucky prize-winners, might easily result in your having a free holiday and a little over. The Secretary, I.O.M. Publicity Board, Douglas, will send a copy of the Guide free on application.

The Children's Corner, Peel Beach.

A general view of Douglas, from Douglas Head.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

THE RISING FRONT.

ACCORDING to promise I am saying something this week about that particular movement of the camera known as the rising front. Perhaps I am a bit of a crank about this arrangement, and attach undue importance to it; but if I explain its purpose simply, it will remain with readers to decide for themselves how much value, if any, they attach to it.

A friend of mine who was examining a small but expensive camera in a shop mentioned that he noticed that there was no rise to the front. The salesman promptly declared that there was no need for anything of the sort, as the

camera was always used at eye-level. Either the salesman was wilfully misleading a possible customer, or he did not know what he was talking about. In some circumstances the height at which the camera is used will make considerable difference in the result; but raising the camera from waist to eyes is not a substitute for a rising front. And how about the awkward fact that the waist-level of one is the eye-level of another?

To make the illustration I took two photographs, natural size, of a $3\frac{1}{2} \times 2\frac{1}{2}$ camera. The upper one shows the lens in its normal position—exactly opposite the centre of the plate; the lower one shows the front raised as far as it will go—in this case $\frac{9}{16}$ ths of an inch. Then I took two photographs with the front in these two positions, and have put the prints so that they show what appeared on the focussing screen in each case. The prints have the dark edges formed by the clear margins of the films, so that there is no trimming.

It will be seen that with the lens in the normal position one of the chimneys nearly runs out at the bottom of the field. Had I gone nearer to the house some of the roof would have been off the plate, but there would still be enough, and to spare, of the foreground.

In the second version, raising the front (and the lens) has lifted the house well into the picture-space. It need not have been brought up as far, but I wanted to show the limit. In some cases every bit of the available rise would be wanted.

On the lens panel is a white dot, and on the side which supports the front is another. When the dots are side by side the lens is central, so that it is easy to see how much the lens is above or below the centre.

In some cameras the front can be raised so much that the lens is opposite the top edge of the focussing screen; but with so extreme a rise it is necessary to have a swing front to bring the axis of the lens to the middle of the screen. This in turn involves considerable stopping down. It follows that only a reasonable rise is possible for hand-camera work. With this particular camera I have used the full rise available for hand exposures, even with a large stop, as the lens covers well.

I admit that many photographers using a hand camera seldom feel the need for a rising front. If there are no vertical lines in the subject they can point the camera upwards or downwards to get what they want on the plate. If there are vertical lines, as in such a subject as the house, they will just as cheerfully tilt the camera, and the cock-eyed result does not perturb them in the least.

Greatest SUMMER SALE

FINAL CLEARANCE of STOCK-SOILED GOODS

"ROLEX"

Roll-film Holders

The ROLEX Daylight-loading Roll-film Holder can be used with most $3\frac{1}{2} \times 2\frac{1}{4}$ in. or $4\frac{1}{2} \times 3\frac{1}{4}$ in. Folding Plate Cameras. The ROLEX takes any make of $2\frac{1}{2} \times 3\frac{1}{4}$ in. roll film.

A few shop-soiled. **SALE PRICE 10/-**

Models available:

- 1-plate size, to fit T-F. Reflex Cameras.
- 1-plate size, to fit Klito and similar Cameras.
- $3\frac{1}{2} \times 2\frac{1}{4}$ size, to fit Voigtlander Cameras.

"LITWEIT" TRIPODS

These new style telescopic tripods are made of drawn brass tubes, highly polished to ensure easy opening and closing. The head of the tripod is only $\frac{1}{4}$ in. in diameter. Suitable for use with any pocket camera.

Model I. Length closed 16 in., length extended 44 in., weight 13 oz.

SALE PRICE 6/9

Light Leather Carrying-case, 5s. 0d.

Model II. Length closed 13 in., length extended 44 in., weight 16 oz.

SALE PRICE 7/9

Light Leather Carrying-case, 5s. 0d.

Not a job line; these Tripods are the product of one of the largest makers; they are of high-grade finish throughout.

4 Sections, length when closed 16 in., length when extended 52 in. Weight 20 oz. List price 10s. 6d.

SALE PRICE 6/9

5 Sections, length when closed $14\frac{1}{2}$ in., length when extended 50 in. Weight 20 oz. List price 12s. 6d.

SALE PRICE 8/9

FLOODLIGHT REFLECTOR

complete with 9 ft. flex with wall plug fitting.

SALE PRICE Without Lamp 18/9

Diffuser, 2/3 extra.

V.P. ROLL-FILM CAMERAS

Takes 8-exp. V.P. size films of any make. F/6.8 anastigmat lens in Chronos shutter. Speeds $\frac{1}{25}$ th, $\frac{1}{50}$ th, $\frac{1}{100}$ th sec. Also T. and B., complete with cable release. New, unsoiled. Maker's list price £4 15s. **Sale Price £2:5:0**

$4\frac{1}{4} \times 3\frac{1}{4}$ ZEISS LENS ROLL-FILM CAMERAS

Fitted with Carl Zeiss f/6.3 Triotar lens. Compur shutter, speeds 1 to $\frac{1}{250}$ th sec., rising and cross front, brilliant reversible view-finder. New condition. Unused. List price £4:10:0 £11 10s. **SALE PRICE..... £4:10:0**

$4\frac{1}{4} \times 3\frac{1}{4}$ ZEISS LENS PLATE CAMERAS

Fitted with Carl Zeiss f/6.3 Triotar lens in Compur shutter, speeds 1 to $\frac{1}{250}$ th sec., double extension, rising front, brilliant reversible view-finder, hooded focusing screen, 2 plate-holders. In new condition. Listed at £4:10:0 £10 10s. **SALE PRICE £4:10:0**

F.P. Holder, 5s. 0d. extra. Extra Plate-Holders, 1s. 9d. each.

$4\frac{1}{4} \times 3\frac{1}{4}$ CAMERAS

Full double extension i-pl. Camera, vertical and horizontal rising front, large brilliant finder, focusing screen. Convertible anastigmat lens f/6.3, 3-speed shutter, 3 plate-holders, in wallet. New.

SALE PRICE..... £2:12:6

FOTH-DERBY Pocket Cameras

The Foth-Derby is the smallest roll-film camera with focal-plane shutter on the market. It takes a V.P. size film and gives 16 exposures 3×4 cm. Shutter speeds $\frac{1}{25}$ th to $\frac{1}{500}$ th sec. Foth f/3.5 anastigmat..... **£4:12:6**

"PILOT" ROLL-FILM REFLEX CAMERAS

Shop-soiled Models.

The Pilot is the smallest roll-film reflex on the market. It gives 16 exposures, 3×4 cm., on V.P. size roll films.

With Carl Zeiss f/3.5 Tessar lens in Compur shutter. List price £18:15:0.

SALE PRICE.... £11:17:6

With Carl Zeiss f/2.8 Tessar Lens in Compur shutter. List price £21.

SALE PRICE.... £14:17:6

SHOP-SOILED SOHO REFLEX CAMERAS

Latest type, with T.B. 1. movement to shutter. The Soho Reflex needs no recommendation. It is recognised universally as a really high-grade example of British workmanship.

$3\frac{1}{2} \times 2\frac{1}{4}$ size, fitted with Dallmeyer f/3.5 anastigmat lens, including 3 double plate-holders. Makers' list price £33 10s.

SALE PRICE..... £23:10:0

$4\frac{1}{4} \times 3\frac{1}{4}$ size, fitted with Dallmeyer f/3.5 anastigmat lens, including 3 double plate-holders. Makers' list price £35 10s.

GAMAGES, HOLBORN, LONDON, E.C.1

Telephone: Holborn 8484.

It must always be remembered, too, that the errors in "drawing," when this sort of thing is done, can be corrected afterwards; at any rate to such an extent that detection is very unlikely.

Further, many a subject that will not go completely into the picture-space from one standpoint, will fit in quite comfortably from a more distant one. This is often a solution of the problem when no rising front is available. So that it is quite possible to get along without a rising front, and to tackle an enormous number of subjects without once missing it.

None the less, my own feeling is that when a rising front is wanted it may be wanted very badly indeed. I am not so fussy about a rise for the horizontal picture position. It may be wanted sometimes even then; but in the very

nature of things it is the upright subject—the "tall" one—that is most likely to give trouble if the lens is fixed opposite the centre of the plate. And these "tall" subjects have a way of turning up pretty often.

The main reason why so many excellent cameras are without this movement is the desire for compactness. If a camera is to have rising front movement both ways of the plate, and also a long extension (and therefore longer bellows), there is necessarily an increase in size and weight. The question is, to what extent is it wise to sacrifice adaptability to portability, and convenience to compactness? It is significant of my own ideas on the matter that I can say that at present I have not a single camera that has not some rise of front for the upright way of the picture.

W. L. F. W.

HIDDEN PICTURES

By W. C. R.

"THE part is greater than the whole" is a well-worn maxim often applied to photography. It would perhaps be more correct to say, "The part is better than the whole," for the amount of difference a

Without further ado, and more as a joke than anything else, I trimmed off the sky and the immediate foreground, remounted the result, and sent it off the same day to the following month's competition. To my great surprise it was awarded a certificate of merit, and by two strokes of the trimming knife I was elevated to that exalted band of advanced workers.

The criticisms which accompany unsuccessful entries for "The A.P." competitions are always very useful

by his pictorial analysis. Frequently he recommends alterations to certain prints by trimming, and it is a useful idea to cover up the part mentioned and see the improvement made. In a short time you will be able instinctively to tell how any print should be trimmed to show it to its best advantage.

In the future make sure that you have no pictures hidden away in your photographs which a little trimming would reveal. Cut out two L-shaped

Lynmouth.
Print from the complete negative.

little judicious trimming makes to a print is remarkable.

The two accompanying illustrations show rather forcibly how trimming can make an indifferent photograph into a picture, and it may be interesting to recall how this picture was revealed. The first illustration was enlarged and sent to "The A.P." Intermediate Competition. It was returned with the criticism that the sky was distracting and the foreground out of focus.

Lynmouth. The finished print.

and constructive. It is well worth while entering the competitions for the criticisms alone, which are of great assistance in improving one's technique and pictorial appreciation.

Much can also be learned by a careful study of "Mentor's" weekly criticism of beginners' prints and

pieces of card, as frequently described in these pages in the past, and carefully mask each part of your print until the best composition is found. You will be surprised how the quality of your work will improve and the number of successful pictures increase.

How I make my EXHIBITION PICTURES

N. CCXL.

—
Mr.
HARRY
JONES.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"I HAVE possessed a camera for many years, but up to twelve years ago was more interested in painting as a hobby. In fact, it was only through the chance purchase of 'The A.P.' at a railway station book-stall that I learned there was such a thing as pictorial photography. The 'Pictures of the Week' by F. C. Tilney intrigued and interested me, while 'Piffie' by 'The Walrus' caused many appreciative chuckles. Soft focus was then very much to the fore, and I formed a hatred of it which exists to this day.

"Through the column of 'Club Meetings' I learned of the Birkenhead

Photographic Association, and joined; and I would like to say that the advice and assistance I received from the members was invaluable. I am also a member of three postal camera clubs. These I find most helpful and stimulating.

"With regard to my pictures, pattern and form are to me of primary importance, and I like human interest in them. Although 'A Brief Toilet' was more or less of a chance shot, it was the realisation of the importance of the bird, and the waiting for it to come into the correct position in the picture, that makes it one of the few successes I have had in this chance way. Usually I form an idea of what I want, draw it on

paper to find the run of the lines and the disposition of the masses, then arrange the subject accordingly. 'Evening by the Fireside' was done this way. I then do not mind how many exposures I make to get everything correct. This picture took about eight, mainly because the fire would blaze up—during the time exposure—behind the embroidery, and spoil the outline of the material.

"I have also a strong liking for the portraiture of men, and take a keen interest in the scientific side, the composition and behaviour of emulsions and developers, light in relation to photography, etc.

"My methods briefly are as follows: After trying most types of cameras I use a quarter-plate tropical Soho reflex, and a half-plate T.-P. stand camera. The miniature types I found useless to me, as it is impossible to work on the negatives. I invariably use Kodak S.S. Panchro. cut film, develop several at a time in a dish, or tank them as I feel inclined, using Borax M.Q. I retouch the negative with pencil and knife, use neo-coccin, local reducer and any other means I can think of to give me the result I desire. I never make contact prints, but use a projection printer—diffuser type—using Kodak Royal or Kovita.

"With prints, again, I do not scruple to use any means I can to alter them to what I desire in the final result, although I try to keep most of the work on the negative, because it makes prints easier to duplicate. I believe that in pictorial photography everything is legitimate if it is not found out, although Mr. Murry Barford, judging an exhibition, found me out badly on one occasion.

"I enter regularly in 'The A.P.' monthly competitions, because I find it a great incentive to do my best, and a spur to me, because it means I must find at least one picture per month.

"The study of the pictures published on the art pages, and the 'Pictorial Analysis' by 'Mentor,' (read after forming my own opinion), I find most helpful; but sometimes I am reduced to despair when I feel I can never equal some of the work reproduced."

EVENING BY THE FIRESIDE.

Harry Jones.

7.—"Cumulo Nimbus."
By R. K. Pilsbury.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

NO. 1 of the prints reproduced on the opposite page—"100 Years of Progress," by Bertram S. Unwin—illustrates a case where the composition suffers from the inclusion of too much. The building on the right and that on the extreme left each exert an equal pull, and the interest is divided between them.

Parts and the Whole.

With this dual attraction, it is impossible for the eye to dwell with satisfaction on the subject. If the building on the right attracts notice in the first place, that on the left draws the attention away, and, in the alternative, if the structure on the left claims the first attraction, it does not hold it because of the pull of the other.

What has actually happened is that there are two compositions in the one print, either of which could very well stand alone, and each being better than the whole.

In the centre there is a comparatively small building that catches the light. If the print be trimmed just to the left of it, an upright picture results on the left-hand side, in which the tall erection on the left is the chief, and the other smaller building, which then comes near the right-hand edge, forms a secondary accent and foil to the larger on the opposite side.

Trimming the remaining right-hand portion of the whole so as just to miss the same centre building, the domed erection towards the right then is able to stand alone as the centre of interest. Being placed nearer the centre, it does not need a supporting accent as was the case with the left-hand side, and, as it is more symmetrical in shape, its form attracts and holds the attention in itself.

Interest Divided.

If the print be masked in accordance with the suggested trim, the two compositions will readily be discernible, and the superiority of each over the existing whole will be apparent.

A somewhat similar state of affairs arises in connection with No. 6, "Fair Weather at Sea," by J. Allan Cash, where there is a division of interest occasioned by the approximately equal pull of the funnel and

ventilator. The funnel is the bigger, and it is felt that it should claim the major share of the attention, but the ventilator is in the stronger position, being more in the picture, and, though the smaller, yet is equally assertive.

As will have been gathered from the remarks on the preceding print, there should be only one predominating object. Here, neither can claim precedence over the other, whereas, had the relative positions been changed and the funnel were placed nearer the centre, the ventilator occurring closer to the margin, the greater magnitude and better placing would have enabled it to become the more important of the two elements.

With a subject so near and filling so much of the picture space, it is, admittedly, difficult to ensure that each element of the composition will fill the place it should. Space on board ship, too, is very much restricted; but, if at all possible, it would have been wiser to have chosen a standpoint somewhat farther off.

A Margin for Error.

Such an expedient would provide a margin for slight errors of this description, for whatever faults in placing that occur could be corrected by subsequent trimming.

As the print stands, however, it is impossible to take anything away without increasing the existing sense of restriction, and the placing, therefore, must be left as it is. In the case of No. 4, "Paris," by F. Mason, the wisdom of the expedient is demonstrated, for, trimmed as it is now shown, the proportions allocated to the framing gateway are just about right, and, although the negative would embrace a greater area, it is not only inconceivable that any addition would enhance the composition, but the wisdom of leaving a margin is conclusively proved by the sense of rightness which the arrangement conveys.

The dimensions of No. 3, "Youth and Age," by D. Hastings, are tiny, but it is wonderfully good from the technical point of view, and, the subject, except for an excess of foreground, well seen and composed.

A trim just to clear the figure "3" is enough to put matters right, but it is somewhat of a misfortune that the slight intrusions on each side were not foreseen and avoided.

The feeling of sunshine is nicely conveyed, and, from all appearances, it would seem that the subject would stand enlargement to a not inconsiderable extent.

A Sense of Light.

In No. 7, "Cumulo Nimbus," by R. K. Pilsbury, the motive is an effect of light rather than sunshine, and, although the foreground is rather too scanty, the sense of luminosity is quite well suggested. Unless, however, Mr. Pilsbury was in the happy position of having a lens of shorter focus with him, it would scarcely be possible to arrange for the inclusion of a better proportion of landscape, for none of the sky could be curtailed, and no feasible adjustment of viewpoint would offer any improvement.

Still, the lack of a foreground is a drawback, and, on another occasion, it may be found possible to arrange matters in more pleasing proportions.

"Coaling Ship, Bombay" (5), by G. Martin, is not without attraction, the reflections providing the reason, but there is a recurrence of the suggestion of a division of interest, in a measure, between the lights on the water above and below the barges. If there were a gap between the latter so that there were a definite connection between the two portions, the suggestion would not arise, and, as the boats would be moving at intervals, the opportunity of obtaining such an arrangement might have occurred had it been waited for.

Conception and Execution.

The idea behind No. 2, "The Night Watchman," by Miss Joan A. Ellis, is good, but from the artistic point of view the execution is weak, for the light on the figure's leg is stronger than that falling on his face. The reverse, of course, should obtain, and, if the illumination were flashlight, it might have been secured by raising the position of the flash, a state of affairs that, in view of the height of the fire bucket, would not be difficult to arrange.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"PAINTING THE MAST," by S. J. Kharegat.

IN making a comparison between this picture and that which was discussed in our last week's issue, it will be observed that there is a certain similarity of subject inasmuch as in both cases a man at work is depicted. It is also interesting to observe that here, again, the line of sight is directed upwards, and, as in the former case, the departure from the normal is justified by good placing, while none of the disabilities arising from distortion is manifest.

Similarities and Differences.

It may be, perhaps, that an equal degree of originality is not attained in this instance, partly because the subject differs in class and is not quite so rare as the other, and partly on account of the fact that there is not the same distinction of treatment; but, all the same, it is an excellent effort, and its appeal is by no means inconsiderable.

The light tone of the lower portion, taken in conjunction with the weighty tone at the top, invites a suspicion of instability; but, on the other hand, the representation is graced by the presence of an effect of sunshine, which, of course, could not be incorporated in the other. It lends a beauty that can scarcely be equalled by any other means, and, it will be seen, takes maximum effect upon the body of the figure (1). It naturally enhances the human attraction which he excites, and places his importance, as the centre of interest, beyond question.

His dominance is still further emphasised by the fact that in his figure is also the greatest depth of tone in the whole picture, the presence of the two extremes in conjunction affording one of the most powerful concentrations possible.

Strength of Placing.

His placing, too, is quite good, being sufficiently near one of the four inter-

sections of divisions of thirds to avoid any suspicion of weakness; but, having regard to the presence of the block (2) on the other side of the mast, it would seem to be preferable that he should be placed farther over to the right and slightly nearer the centre.

The suggested alteration could be effected by adding about half an inch

for the tone of the sky toward the base to be darkened, particularly in the neighbourhood of the two corners.

It could be done, providing care were taken, without introducing any unnatural appearance, and might be achieved either by the application of oil pigment, by means of an air-brush, or by local extra printing. The precise method is unimportant, and the most familiar is likely to be the most successful.

The slight darkening would have a further advantage, in that it would enhance the present suggestion of sunshine and enable the sky to convey a greater sense of luminosity and light. The values of all the subtle gradations of the lights and shadows on the figure, the mast, and in the sky itself, would attain a higher value by virtue of the additional contrast. Besides this, the alteration would tend to afford a still greater concentration to the central portion of the picture and so confer a still further emphasis on the figure.

Opposition of Line.

A minor feature, but one which is worthy of notice, is the way the lines of the clouds happen to fall. The main lines of the picture are vertical and horizontal, the mast and rigging being upright and the crow's nest almost level. Towards the lower centre the lines of the clouds are roughly horizontal, and not only do they emphasise the strength of the vertical line of the mast by force of opposition, but they lead up to and enhance the dominance of the figure.

Up above, where the horizontal line of the nest meets the mast—a factor which heightens the importance of the vertical line of the latter—the directional tendency imparted by the clouds is somewhere about midway between the two other directions. Here, yet again, the value of opposition as a source of strength is demonstrated.

"MENTOR."

to the left-hand side and trimming a similar amount from the right. At present, the block is almost more forcefully placed than the figure, and, although the other factors referred to ensure his principality, the revision corrects the relationship between the two items in question. The composition, too, appears more finished and complete; and it is also possible that the other point under criticism, in connection with a certain lack of stability, might be partially countered, if not entirely removed, by arranging

Rough Weather at the Seaside

By R. A. ISAAC.

WHEN taking a seaside holiday, calm, sunny weather is very desirable, but it cannot be denied that the sea under such conditions is apt to be flat and uninteresting from a photographic point of view.

However, directly a good stiff breeze springs up from the right quarter endless opportunities are offered for obtaining some really striking snapshots, and whilst a rocky coast will provide a more pictorial setting, the more conventional promenade and breakwater are not to be despised.

Large rollers coming inshore often make good pictures, and when they break against the sea wall the columns of spray which they throw up in an infinite variety of forms provide pictures which add much interest to the holiday album.

A Rough Day on the Sands.

The Sea Wall.

A very fast shutter is by no means essential for this kind of work, and the simplest camera can be used with success; the illustrations shown

at its height there is a moment when, before it falls again, the water is apparently stationary, and this is the time to "snap." When the exposure

here were taken with an inexpensive film camera, the exposure being 1/100th of a second at f/8. The secret of obtaining results showing the minimum of movement lies in judging the correct moment to release the shutter.

When watching breaking waves it will be noticed that when the spray is

has been made, do not hurry away to another viewpoint, as one breaking wave is never the same as the next; in fact, a whole spool of film may well be exposed at one spot which can result in a series of entirely different pictures.

One of the best viewpoints is from the "sea" side of the subject (see illustration "The Sea Wall"). This is not always easy, but often a curve in the promenade or a projection in the coast will allow of this. Striking results, too, are obtainable by photographing against the light.

One word of warning—keep your camera covered up as much as possible between exposures, for a rough sea gives rise to vast quantities of fine, misty spray which is not at all good for the metal work, and it may also cloud your lens.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, August 1st.

Camberwell C.C. Slide-Making. J. H. Clark.
Plymouth Inst. P.S. Coffete Mill and Creek.
Rochdale P.S. "Some Prints and How they were Made." J. S. Fielding.
Stockport P.S. Alliance Prints.

Thursday, August 2nd.

Hammersmith H.H.P.S. "Photography in Metallurgy." T. H. Schofield.
Isle of Wight C.C. Portfolio by Marcus Adams.
N. Middlesex P.S. Competitions. Members' Queries.

Saturday, August 4th.

Bath P.S. Farleigh Castle.
Bristol P.S. Red Hill.
Nottingham and Notts P.S. "Summer Cruise."
Oldham P.S. Broadbottom.

Saturday, August 4th (contd.).

Partick C.C. Mystery Run.
Singer C.C. Whistlefield.
South Glasgow C.C. Whistlefield.
Stockport P.S. Bredbury—Chadkirk.

Monday, August 6th.

Hucknall and D.P.S. Lichfield.

Tuesday, August 7th.

Camberwell C.C. Practical Studio Night.
Nelson C.C. Lecturettes.

Wednesday, August 8th.

Leigh Lit. Society P.S. Mystery Ramble.
Rochdale P.S. Holiday Experiences.

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Amateur Cinematography

The Technique of Swing Shots By "ACTINOGRAPHER."

Even the most casual use of "swivel" shots is anything but a simple matter; and where the camera-man desires to attempt ambitious work it becomes necessary to understand something of the technique of the device.

SWING or "swivel" shots are amongst the most valuable of all camera devices used in cinematography. They enable the director to introduce new scenes and sequences without having to countenance the slow-down effect of direct cutting. They enable him to point the relationship between one phase of action and another through the line of least resistance; and they are helpful in creating that movement within the film itself which distinguishes cinema from the fixed stage technique.

Being a valuable device, the swing shot must be used as frequently as occasion demands; but—as in the case of most other valuable devices—its employment can easily be overdone. For example, the "swivel" must not be adopted merely to keep the principal action character in the centre of the frame. And it must never be employed to "head-off" characters which will later appear to continue the action from an earlier scene.

When to Swing.

The correct times to swing the camera are easily recognised by experienced workers, though they may not be very apparent to the raw beginner.

They are indicated by particular phases or features of the production itself, and these should be distinguished in the script.

As a more general rule, however, it is safe to swing the camera whenever a comprehensive shot of any panoramic setting is called for. It is unwise in such shots to include a great deal of incident; but where this cannot be avoided there should at least be no attempt to include the high-spots of action.

The device may further be used in various contingencies where a shot by any of the more orthodox methods would be quite out of the question. Thus the swing shot may be used to "follow through" in a case of violent action (as in shots of horse-racing or athletics taken on a circular course, etc.—where familiar cutting methods

would delay the *tempo* and change the very nature of the action itself).

Vertical Swings.

All sorts of movements are possible in cinematography, and the camera can be controlled in vertical as well as in horizontal swings.

Vertical swings, however, are far more difficult to operate than are the straightforward "swivels"; and it is certain, too, that their use is less frequently indicated. Amongst the professionals who have any real grasp of cinematography, Eric von Stroheim makes glorious use of the vertical swing; and I would recommend his earlier work in particular to those who wish to study the effects and moods of this rather uncommon device.

In using the vertical swing, one may have to change the focussing as

the camera sweeps upwards or downwards to remote or adjacent scenery. This advice becomes especially important where the latter is very close, or where a modern lens of long focus or narrow angle is being used.

Care.

In all work of this description, the exercise of reasonable care is essential to securing good results. Hence the camera should not be held in the hand or on a unipod—for the former may be a trifle unsteady, and the latter is productive of a slower though still definite swaying which is quite unavoidable unless the worker can brace himself against a reasonably firm support.

Even where a tripod is used, there is no guarantee of perfect swinging. This can be assured only where the instrument is provided with the double-

A simple action subject for which the swing shot can be effectively employed. The approach of the flock, the left turn, and the progress of the leading sheep for some distance, will convey a good idea of pictorial movement. At the same time the main subject is kept within the frame throughout the entire action.

movement head and where the static level is properly checked beforehand. Without these precautions, the movement may appear unpleasantly jerky, and there may be a tendency for the horizon to rise or drop immediately the swing is commenced.

It will be seen from this that even the most casual use of the device is

anything but a simple matter; and where more ambitious work is attempted it becomes necessary to employ a particular technique according to the effect it is desired to create. Much can be done by selecting a difficult problem and tackling it on paper—though easily the most skilful cinematographers of my acquaintance

are those who persevere through sustained and continued practical work.

NOTE.—Swings and swivel shots are not strictly "pans." The latter are in reality long tracking shots taken at right angles to the set; and in the big studios they are beginning to recognise this interpretation.

Centring the Projection Lamp "COMPUR."

ONE of the essentials to brilliant projection is a properly centred lamp. Without this, the pictures may be well lighted at one corner, but dimmer in the middle, and quite dull towards the farther corners of the frame.

Such a state of affairs is, of course, quite easy to recognise—even without its familiar accompaniment of a rainbow-like spectrum; but it is more usual to find the lamp only slightly out of centre, and in this condition it is not easy to detect the fault.

It is dangerous, of course, and useless to look through the lens and into the lighted lamp, but an image of the filaments may be thrown on the screen and examined for perfect centring. This can be done by holding a positive lens or a reading glass immediately in front of the lens and altering its position until a well defined image of the filaments is seen on the screen.

In all cases of direct lighting, the filaments should present a square face to the front of the screen. To make any adjustment, it is inadvisable to

tamper with the lamp itself; instead, the holder—which is usually adjustable through a friction grip—should be brought correctly into position.

The adjustments should be studied beforehand to enable them to be done neatly when the lamp is alight.

Not only the screening, but the lamp itself can suffer through bad centring, hence it is important to correct all such faults without delay. And it is important, of course, to look for faulty centring immediately a new lamp is installed in the projector.

The New "Dufaycolor" 16-mm. Film

THE long-promised "Dufaycolor" 16-mm. film is at last on the market, and the amateur cinematographer can now obtain pictures in full colour with the greatest ease.

The wide-aperture lens and the projector with a high-power illuminant are not necessary for the "Dufaycolor" film; the speed and transparency of the product enables the man with the $f/3.5$ camera and the normal-power projector to do colour work with every assurance of success. He will be able to secure pictures of a brilliance and a fidelity to nature which have hitherto been unobtainable, except under conditions that in many cases have been prohibitive.

"Dufaycolor" 16-mm. film is not just a fair-weather film. It can be used under a widely varying range of conditions and throughout the year. Successful pictures have been made with it in the depth of winter and in the rain, under clouded skies and clear. One of its outstanding features is the retention of luminous liquid tones in the shadows, giving a result very different from the harsh effects so often associated with colour processes.

A filter is used in the camera when taking "Dufaycolor" pictures, but it is a simple, inexpensive, one-colour filter. The film is a reversal film, and when it has been processed the colours are in the film itself, and can be examined when holding the film in the hand. This is a great advantage in editing; the full effect of the colour can be taken into account when cutting from shot to shot.

Because the colour is inherent in the film *no filter is necessary in projection*. This is not only a saving of expense to the user, but also avoids the troublesome difficulties of micrometer projector lamp adjustment which is associated with the use of the projection filter.

In fact, in both taking and projection, "Dufaycolor" involves no more trouble than black-and-white film. The amateur ciné worker who uses it can press the release button of his camera with the assurance that, unless he does something really foolish, he will secure a pleasing colour picture every time, and he will be able to show it with the aid of any normal-power projector. This will appeal to thousands of amateurs who do not wish to buy new apparatus.

It is sold at a price which is acceptable to every amateur ciné user, 21s. per 50-ft. reel, and this charge includes the processing of the film ready for projection. This processing will be carried out at the "Dufaycolor" Processing Station at Elstree, which is the most recent and up-to-date establishment of its kind, and is staffed by trained experts who know how to get the utmost quality out of every spool sent in to them, while at the same time the facilities at their command enable them to carry out the work with celerity. This will be appreciated by all who try the new film.

The film is now on sale at many dealers, and is obtainable direct from Spicer-Dufay (British), Ltd., Astor House, Aldwych, London, W.C.2.

News from the Clubs

By M. A. LOVELL-BURGESS.

I AM interested to hear that a ciné society has been started in Aberdeen, with Mr. Henderson of King Street as a keen member.

Work is at a standstill at the Weymouth Ciné Club owing to the death of Claude Varlow, who was directing the club's film.

"As a matter of fact he was the centre post around which the club revolved," writes Mr. E. Lightfoot, "so you can guess how we feel. He was an electrical sound engineer, and he was planning an entirely new system of sound-on-film for 9.5-mm. film. The whole thing is now

lost for ever, and the amateur film world is very much the loser."

On Saturday evening the Ciné and Radio sections of the Golders Green and Hendon Radio Scientific Society met at the Regal Cinema, Golders Green, for the presentation of prizes distributed by Lady Rogers and Sir Leonard Rogers. A number of amateur films were projected. The programme was opened with "Pathe Gazette, June 1934," followed by "Trees," an abstract film by The Ardadians, a recently formed London amateur group; "Almost an Accident,"

a comedy, also by The Ardadians; "Hendon Air Pageant," a record of this event made in 1931 by one of the section's members, and "All is not Gold," the prize-winning film of the Brondesbury Ciné Society.

Unfortunately, it was not possible to screen any part of the documentary film on which the ciné section is working, owing to the fact that sufficient material was not completed in time. Shooting is going forward, however, and another film, dealing with the London Docks, is contemplated.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

A SIMPLE CINÉ EXPOSURE TABLE.

SIR,—The following exposure table is composed from practical experience, and will, I hope, appeal to many readers of "The A.P.," and serve as a guide for the increasing number of new cinematographers. The distances and stops are particularly easy to remember, and as good as a list of subjects. The table is, of course, for the normal shutter speed.

Exposure table for May to August. Sun shining, but not necessarily on subject. From four hours after sunrise to four hours before sunset.

Long distance, over 5 miles, $f/22$, distant landscape, clouds.
Distant view, 1 to 5 miles, $f/16$, open landscape, shipping.
Middle distance, $\frac{1}{4}$ to 1 mile, $f/11$, ordinary landscape, open river.

Near view, 50 yards to $\frac{1}{4}$ mile, $f/8$, landscape with strong foreground, well-lighted streets.

Close-up, 5 yards to 50 yards, $f/5.6$, portraits or groups, not in too much shade.

Use the next larger stop if the sun is obscured, or between two and four hours after sunrise or before sunset.

If the largest stop is $f/4$, take nothing but open seascape at sunset and take nothing after sunset.—Yours, etc.,

F. ELLIOTT.

PLATE-CHANGING ON HOLIDAY.

SIR,—In your article last week entitled "Touring with Car and Camera," "Fleetwing" states: "In case of plate-users, hotel bedrooms can be easily converted into dark-rooms for the purposes of plate-changing."

I should have thought this change could only have been effected with very great difficulty, during the daylight hours, of course; and I therefore venture to remind your readers of an old dodge which I as a plate-user have employed many times in emergency without the least signs of fogging.

The side of the bed is untucked and a coat, preferably an overcoat, is spread out in the bed between the sheets with the lining side down and the sleeves hanging out over the edge. The bed is now tucked up again and the collar of the coat also tucked in under the mattress; but the sleeves are allowed to hang out as stated above.

If the window blinds are drawn to make the room as dark as possible, and the counterpane allowed to hang down over the bed (as it would in the ordinary course of events), plate-changing may be carried on inside the bed by putting the arms up through the sleeves into the space between the sheets. If a lidless box is placed on its side in the bed before the preparations are made, it will support the weight of the clothes and prevent fluff being included in the slides.

I take no credit for this wrinkle, as it is by no means a new one, but it may be of interest to someone if my description is intelligible.—Yours, etc.,

C. P. C. MARTIN.

FOGGING ROLL FILMS.

SIR,—I wish I could report as happy an experience of the use of super-sensitive panchromatic films as your correspondent, R. E. S. White, in your issue of July 11th.

I over-exposed at first—the speed of these films is surprising. Also the light conditions on the Italian Riviera may have been different from those where I live, in the Swiss Alps.

But the real trouble was unquestionably light getting through the red window at the back of my camera, which at first gave me rows of little fog spots. My camera is fitted with a cover over the red window. I exposed a film with this cover closed the whole time, by counting the turns of the winder—having first checked it with a film backing. That roll was quite free from fog. But I hadn't got my turns quite right, so only got seven exposures out of an eight roll.

During a day on Lake Maggiore, on our way home, I felt that I must use up these films, so tried counting the winds nearly to the end, and just opening the cover very quickly to check the appearance of the number. The result of that was—no spots, but a band of fog vertically across the film, of varying

width, presumably according to how long I had the window open.

Summing up my experiences, I have little doubt that by having a much more opaque window fitted, I should be able to use these S.S. films. But I had a camera with a very opaque window once, and wasted film over and over again because it was literally impossible to see the numbers without holding the camera in bright sunlight, which is not always available.

This must not be taken as a condemnation of S.S. films, for undoubtedly they do extend the range of photography possible at short notice, and when it is not convenient to incur the delay of setting up a stand to make a time exposure. But it seems to me that the use of these things, if it is going to increase, calls for a development of some automatic winding device, or even a simple device for winding to a dial, which would obviate the need of the red window altogether.—Yours, etc.,

ROGER C. CARTER.

FOG-PROOF CAMERA WINDOWS.

SIR,—With regard to the controversy about fogging through windows that are not panchromatic-proof, may I suggest that the simplest way of obviating the trouble is by having red windows that are panchromatic-proof. The remedy is with the manufacturer.

Messrs. Zeiss Ikon have realised this for some time, and I have never had any fogging from this source, though I have used pan. films in one or other of their Ikontas for more than a year. It only remains for others to follow their example. Covers to windows are a great nuisance, especially as they have a tendency to work loose.—Yours, etc.,

K. LATIFI.

THE PERFECT CAMERA.

SIR,—After twelve months' experience with a 24×36 mm. camera I will follow the example of Mr. F. A. Samuel, and give my ideas of the sort of miniature camera I should produce if I were a designer.

My ideal miniature would, in general form, follow fairly closely the Leica or Contax, and would have coupled focussing, focal-plane shutter, automatic film-shift and quick-change lens flange. It has always seemed to me that the spooling arrangements of these cameras are complicated and expensive to produce, so my camera would use ordinary V.P. film on which it would give twelve pictures about 40-mm. square. The only drawback to the square picture (its inartistic shape) disappears during the enlarging process, and the advantages are many. The covering power of the lens would be fully utilised, and as the camera would always be used in the horizontal position, the contortions at present necessary when using an ever-ready case and a broad-brimmed hat would be obviated. Most important, the rising front would be possible; but if I found that the auto-coupling rendered this too complicated, I would strongly consider giving the lens a permanent rise of a few millimetres above the centre of the film.

Twelve exposures at a loading is quite ample for the average amateur, but I should approach the film manufacturers with a view to their providing a 24-exposure spool, and should build my camera to take this size if and when it became available.

I see no reason why such a camera, complete with $f/3.5$ lens, should not be produced for about £15. Messrs. Dallmeyer, to mention only one firm, already supply a complete "battery" of suitable lenses at quite favourable prices.

I suggest the price (£15) not without some knowledge of production methods, and bearing in mind the fact that present prices bear no relationship to the value of the goods. For instance, a well-known camera sold in England at £21 costs the German amateur £7 10s. (in his own currency, of course), while an exposure meter, costing £5 5s. here, is, I am told, sold in Germany for RM 28, which to the German purchaser represents 28s.

There would, I feel sure, be a good market for an English-made precision camera on the lines I suggest, but it would be very interesting to have the views of other readers.—Yours, etc.,

H. BRAITHWAITE.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Photographs of the Royal Navy form the subject of the present exhibition at the Ilford Galleries, 101, High Holborn, W.C.1. The exhibition was opened on Wednesday of last week by Sir A. Ernle Chatfield, K.C.B., First Sea Lord. This was the first public ceremony in connection with "Navy Week."

Lantern Lectures about Britain during the time of the Romans, specially designed for "popular" audiences, will again be available to recognised photographic societies, the lecturer being Mr. Geoffrey E. Peachey, Advertisement Manager of *The Amateur Photographer*. The subjects are "Some Tales of Roman Britain" and "Hadrian's Wall." No fees are charged for the lectures, but travelling expenses from London or Brighton, whichever may be the nearer, will be payable. Secretaries desirous of one of these lectures should apply to Mr. Peachey at Dorset House, Stamford Street, S.E.1. and supply vacant dates between October, 1934 and March, 1935, inclusive.

The Summer School organised by the Independent Film Makers' Association will be held at Digsweil Park Conference House, Welwyn Garden City, from Friday, August 3rd to Monday, August 6th. Full particulars from the Hon. Secretary, Thomas Baird, I.F.M.A., 32, Shaftesbury Avenue, W.1.

We regret to have to announce the death, on July 23rd, of Mr. F. E. Greenwood, who has been for many years Managing Director of the firm of Messrs. Elliott & Sons, Ltd., of Barnet. He had been associated with the firm for over forty years, and was also Hon. Secretary of the British Manufacturers' Association. Mr. Greenwood had a charm of manner that endeared him to all his personal and business friends. His son, Mr. F. W. Greenwood, now assumes the position previously occupied by his father.

Complete courses of instruction in all branches of photography, including professional portraiture and commercial work, are announced by the Polytechnic School of Photography, Regent Street, W.1. This school has secured a high reputation for the excellence of the instruction provided, and any reader of *The Amateur Photographer* who desires a full practical grounding in photographic work should apply to the Director of Education, at the above address, for prospectus with full particulars. The new term commences September 18th.

A new edition of that well-known book "The Photography of Coloured Objects" has just been published by Kodak, Ltd. This has become a standard work on the subject, and in it the theory

underlying the photography of coloured objects and the application of that theory to practice is dealt with in the clearest manner. It is a book everyone interested in colour work and panchromatism should obtain and read with profit. The price is 2s. 6d., or 2s. rod. post free from Kodak, Ltd., Kingsway, W.C.2.

A book that will appeal to innumerable amateur photographers who are anxious to turn their hobby to good account has been published by the Fountain Press, 19, Cursitor Street, London, E.C.4. It is entitled "Money Making Photography," and the price is 3s. 6d. net. It embodies all practical modern methods by which the amateur can apply his photography to good account for the purpose of profit. The book is by William Alexander, who has already written an excellent practical book on "Modern Photography with Modern Miniature Cameras," also published by the Fountain Press.

Ilford Ltd. have just issued an attractively produced and well-illustrated booklet on "Infra-Red Photography." This phase of photography is fully explained in simple language, and many examples of its application are given with working details. The booklet will be sent on application to Ilford Ltd., Ilford.

Beginners in amateur photography who are taking an interest in the production of their own negatives and prints should write to Messrs. Johnson and Sons, of Hendon Way, Hendon, N.W.4, for free copies of their booklets, "How to do your own Developing," "How to make Gaslight Prints," "How to do Flashlight Photography," and "How to make Bromide Prints." To help further those who are starting, Messrs. Johnson will send on receipt of a P.O. for 1s. 7d. a trial set of chemicals for developing and fixing 12 spools of film and making 3 dozen gaslight prints.

Which group of ciné amateurs would like to see one of its own amateur films shown at the International Exhibition of Fine Art in Venice in August? Mr. P. M. Pasinetti, an Italian on a visit to this country, and a well-known worker who deals with cinema criticism and production, is anxious to get on the track of some worth-while films for this exhibition. Here is an opportunity for British amateurs to show Italy what they can do. It is also an opportunity for encouraging that international co-operation without which the ciné movement will continue to be local and limited. Those interested should get in touch with Mr. Pasinetti, at 13, Randolph Crescent, Maida Vale, London, W.9.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, August 31. Rules in the issue of July 25. Derby P.S. Jubilee Exhibition.—July 21–August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18–September 15. Application for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers, please copy.)

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31–September 15. Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20–25. Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Open, August 24–September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Open, September 24–30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8–October 6; sending-in day, August 29; entry forms from Hon. Secretary, 54, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6; sending-day August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26–September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowderska 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Fine-grain Developer.

Some years ago Messrs. Kodak suggested a simple metal developer for fine-grain negatives, but I cannot trace it. Have you any recollection of it?
P. L. C. (London.)

One such formula, at any rate, was made up as follows:

| | |
|----------------------------|----------|
| Water to | 14 oz. |
| Metal | 8 grs. |
| Sodium sulphite (anhy.) .. | 400 grs. |
| Borax | 8 oz. |

The composition of this indicates that it will be slow in building up the necessary density, but the silver will certainly be reduced in a very fine form.

Trouble with Bellows.

I find that sometimes the back of the bellows of my camera will cut off a strip of the picture. Is there any way of making sure that this will not happen?
C. S. (London.)

This trouble generally arises when a camera with long extension, and therefore long bellows, is used at normal extension. The remedy is to have two rings attached to the bellows by lugs and pieces of elastic, and to pull these forward and hook them on to convenient projections on the front. Many cameras have these already fitted, and in some cases there are hooks which automatically disengage themselves as the front is racked out, and engage again when it is racked in and closed up.

Paper Negatives.

I notice in your paper a reference to paper negatives, presumably for contact printing from enlargements. This seems interesting. Could you give me some information, and tell me the composition of the varnish used?
A. C. A. (Kensington.)

Most of the large bromide paper makers have a brand for negative-making, and with it you will find sufficiently full instructions as to procedure to enable you to set to work. Methods of making the paper more transparent are also described.

Uranium Toning.

What is the procedure for getting reddish tones on bromide prints with uranium?
W. F. (Huddersfield.)

The colour is obtained by subsequent toning of a black print. Make up two solutions:

| | |
|------------------------------|---------|
| A. Uranium nitrate .. | 90 grs. |
| Water | 20 oz. |
| B. Potassium ferricyanide .. | 90 grs. |
| Water | 20 oz. |

Take equal parts of A and B, and for each ounce of the mixture add 20 minims glacial acetic acid. When the desired colour has been reached, wash the prints in changes of still water until the high-lights are cleared. The prints will "live" longer if they are then given five minutes in:

| | |
|-----------------------------|---------|
| Hypo | ½ oz. |
| Potassium metabisulphite .. | 70 grs. |
| Water | 20 oz. |

Subsequent washing must again be in still water only.

Poppy Oil.

In some recipes for "dope" for bromide prints I find that poppy oil is mentioned instead of linseed oil. Is there any advantage in this? Where can it be obtained?
F. E. A. (Bath.)

Poppy oil is clearer than linseed oil, and has not the same tendency to turn yellow in course of time. The amount left on a print is so small, however, that this is of no practical importance. This, and the other materials used, are stocked by artists' colourmen.

Books on Dark-rooms.

Can you give me the names of any good books on construction and layout of dark-rooms?
R. E. O. W. (Sherborne.)

For literature on the subject of dark-rooms and their equipment we should advise you to communicate with Messrs. Henry Greenwood & Co., Ltd., of 24, Wellington Street, Strand, London, W.C.2.

Dark-room Walls.

The only available place I have for a dark-room has white enamelled walls. Will this matter when developing or enlarging?
W. H. B. (Reading.)

If you are suspicious of trouble in your dark-room as a result of the white enamel you may safely dismiss this idea from your mind as regards developing plates. If the light from your lamp is safe in the ordinary sense of the word no harm will result from any reflection of that light, provided the usual precautions are taken during development. When it comes to enlarging, however, the case is different. You will here be using actinic light, which may quite possibly be reflected from the white walls on to the bromide paper, and so fog it during the exposure. We should think, however, it would be quite possible to put up some sort of a screen near the easel so as to prevent this happening.

Exposures Abroad.

Can you give me a table of exposures for use in Madeira?
L. E. (London.)

There cannot possibly be such a thing as a table of exposures for all subjects, lights, plate speeds and stops; and the only thing we can advise is that you should use an actinometer. This will help you by giving you the photographic value of the light at any particular time, and, according to the instructions with the meter you use, you must make the necessary allowance for type of subject, stop used, and so on.

Patchy Negatives.

What has happened to cause the patches on the enclosed film? How can I remove them?
A. E. P. (London.)

There are indications which suggest that your negative may not have been properly fixed and washed. The general markings like patches of mildew on the film, however, are not uncommon with films that have been kept a long time, especially where they are accessible to damp, and to tropical conditions under which you say these were stored. If you rub the surface over quickly with a soft rag slightly moistened with Baskett's Reducer we believe that the whole of these marks will disappear. Anything that has resulted from imperfect fixing and washing will probably be beyond remedy.

Quantities of Solution.

Will you inform me if 5 oz. of developer per 10 half-plate bromide prints, and 1,000 c.c. of fixing solution per 50 prints, will be reasonable quantities?
D. J. S. (Bordon.)

We consider that you are cutting it pretty fine both with the developer and the fixing solution, and particularly with the latter, especially as there is no need for economy in this case. As regards the developer, it is easy to see when it is becoming exhausted, and as soon as it noticeably slows down, or there is any falling off in the colour, we should advise you to use it no further. The acid fixing bath is more difficult to check, and as its work is of such importance it is advisable to keep well on the safe side.

NETTAR for $3\frac{1}{4} \times 2\frac{1}{4}$ ROLL FILMS

A TYPICAL ZEISS IKON PRODUCT

THE CAMERA FOR THE HOLIDAYS

The Nettar has so many advantages that before purchasing a camera at £3 10s. or upwards the up-to-date amateur will see the Nettar first. The Nettar has rapid anastigmats, and is self-opening by pressing a button. The Zeiss Ikon "two-dot system" makes possible sharp pictures without special focussing by simply adjusting focus and diaphragm to respective dots. Give a 1/25th second exposure, take your snapshot out of doors in any fair light, and you get pictures.

NETTAR PRICES:

| LENS. | SHUTTER. | |
|-----------------------|---|---------|
| Nettar Anas. f/6.3 .. | Nettar 1/25th, 1/50th and 1/100th sec. .. | £3 10s. |
| " " f/4.5 .. | Telma with delayed action .. | £5 5s. |
| " " f/4.5 .. | Compur " " " .. | £7 7s. |

We regard the NETTAR as the finest value in moderate priced present day roll-film cameras.

ZEISS IKON LTD.

11, Mortimer House, Mortimer St., London, W.1

From
£3 10s

A beautifully illustrated 64-page catalogue illustrating the NETTAR and other cameras will be sent free on application.

CARL ZEISS (LONDON) LTD.
Mortimer House, 37-41, Mortimer Street, London, W.1

The London Salon of Photography 1934

SENDING-IN DAY, Wednesday, August 29th

THE TWENTY-FIFTH EXHIBITION promoted by the Members of the London Salon of Photography will be held at The Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1, from SATURDAY, 8th September, to 6th October, 1934.

CONDITIONS OF ENTRY.

No. 1. Pictures from exhibitors in the British Isles must not be framed; but may be mounted. Each picture must bear on the back, clearly written, (a) name of artist; (b) number and title of picture; corresponding to particulars on the Entry Form.

No. 2. When mounts are employed, they should conform to the following sizes—25×20, 20×16, or 15×12, but no mount to exceed 25×20; and it is suggested that white or light-toned mounts be employed wherever possible.

No. 3. Pictures from abroad must not be mounted (or framed), but should bear full particulars as above.

No. 4. Pictures which are sent unmounted will be suitably mounted by the Salon Committee, and all accepted pictures will be shown under glass.

No. 5. All pictures should be sent by parcels post, packed flat, and properly protected with stiff cardboard and adequate wrappings, addressed to: THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY, 5A, PALL MALL EAST, LONDON, S.W.1.

No. 6. The sending-in day is Wednesday, August 29th, 1934. All pictures for the Exhibition must arrive at the above address on or before this date. Exhibits may be delivered by hand at the Gallery on this date only.

No. 7. The Entry Form, properly filled in, must be sent with the pictures, together with entry and packing fee of 5/- (this fee covers any number of pictures from one exhibitor).

No. 8. To avoid Customs complications, all entries from without the United Kingdom must be sent by post and without prices marked on the prints. Packages containing such entries should be clearly labelled: "Photographs for Exhibition Only. No Commercial Value. To be Returned to Sender."

No. 9. All pictures sent by post will be repacked and returned, carriage paid, after the close of the Exhibition.

No. 10. In view of application being made from time to time to The London Salon of Photography for permission to reproduce pictures from the walls of the Gallery, exhibitors are asked kindly to signify on the Entry Form whether they have objection to such permission being given. The copyright, in all cases, remains the property of the authors of the prints.

No. 11. The Committee assure intending exhibitors that the utmost possible care will be taken of all work submitted, but they do not accept any responsibility for loss or damage, either during transit or at the Gallery.

The submission of pictures will be understood to imply acceptance of the above conditions.

Due notification of acceptance of pictures will be sent out as soon as possible. All work submitted to the Selection Committee will be carefully and impartially considered, and no preference will be given to pictures by Members of the Salon.

Entry forms and further particulars from the Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watco, London." Telephone: Hop 2333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26b, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

Notes being untraceable if lost in transit should not be sent as remittances.

& Co.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'."

Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

BARGAIN.—1-pl. Folding Ensign Camera; as new, £2; and leather case.—Allwood, Queen's Rd., Kenilworth. [3049]

V.P. Goerz Tenax, f/6.8 Dagor, Compound shutter, F.P.A., purse, 32/6; 3-in. f/2 B. & L. Anastigmat in General shutter, 32/6.—C. Wilkerson, 68, Crown Rd., Gt. Yarmouth. [3070]

1-PLATE Goerz Anschutz, f/3.5 Dogmar, 3 double 4 slides, F.P.A.; only slightly used, £15.—Below.

HOLIDAY Bargain.—3×4 cm. Foth-Derby V.P., f/3.5 lens; perfect condition, 65/.—Cook Optician, Newark. [3094]

IMPORTANT NOTICE

Owing to the August Bank Holiday, the next issue of "THE AMATEUR PHOTOGRAPHER AND CINEMATOPHIL" (dated August 8th) must be closed for press earlier than usual.

In accordance with the Notice that appeared last week, the latest date upon which MISCELLANEOUS ADVERTISEMENTS can be accepted for the above issue is
FIRST POST, THURSDAY, AUG. 2nd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

N. & G. Sibyl 3½×2½, Sibyl-Cooke f/6.5, ½ to 1/100th, D.V. finder, 10 clip-on slides in wallets, F.P.A. and Agia Isochrom F.P., leather case; perfect, £3/15.—S. Woodhouse, 8H, Beaconsfield Buildings, Islington, N.1. [3072]

DELIGHTED with The NEW NORFOLK

READ THIS TESTIMONIAL

"I have tried the new 'Norfolk' out under varying conditions, and am completely satisfied with it. The definition of the lens is really excellent, and the whole camera is most beautifully constructed, all movements being smooth and accurate." R. W. (Chesterfield.)

Specification:—

3½×2½ Plate & Film Pack Camera
F/3.5 ZERANAR Anastigmat Lens (4½-in. focus),
COMPUR delayed-action SHUTTER.

This is a precision instrument constructed of a light alloy strong, but of very superior finish. Rising and cross front, both actuated by micrometer movements. Clear and direct vision view-finders.

The Zeranar lens gives very critical definition and is equal to most lenses at double the price. Price only **£6:15:0**

(Nine equal payments of 15/9), including 3 Slides. Film Pack Adapter 6/9. Extra Slides 1/9. Best Leather Case 15/-.

Also fitted with Meyer Trioplan 1/2.9 lens.
 Best Allowance for your present apparatus in Part Exchange.
 Established over Half a Century.

The AMATEUR^{3D} PHOTOGRAPHER

& CINEMATOPHOTOGRAPHER

~ The Journal for Everybody with a Camera ~

Vol. LXXVIII.

Wednesday, August 8th, 1934.

No. 2387.

A Rolleiflex Picture

Good snapshots of children are admittedly difficult to get. Yet the Rolleiflex succeeds, without any special skill on the photographer's part. To get unusual holiday pictures, equal in charm and merit to the lovely child pictured here, you must get a Rolleiflex; its unique features (fully explained in the brochure) will automatically register success with every picture you take.

With F/4.5 ZEISS TESSAR, £20 : 0 : 0 With F/3.8 ZEISS TESSAR, £22 : 10 : 0

You take pictures on "PANATOMIC"

SO FAR as sheer beauty and brilliance of tone distinguish 'pictures' from 'snapshots,' "Panatomic" gives you

a *picture* every time. Fine detail, subtle gradation, pearly high-lights, soft shadows—those characteristics that collectively make up 'quality'—are present in every negative on "Panatomic" Film.

The new emulsion makes the difference. "Panatomic" is a fully *Panchromatic* film of almost *Atomic*-fine grain (that makes it superb for enlargements). And it is fast; double-coated; anti-halation backed.

"Panatomic" has all the virtues. Use it for your finest work.

SUPER IKONTA

In pre-Super Ikonta days the user of a roll-film camera had to depend upon his focussing scale for focussing. This involved either judging or measuring the distances. But no one can judge distances with certainty—it usually resolves itself into guesswork. Zeiss Ikon in their Super Ikonta have completely removed the focussing difficulty. A glance through the distance meter, a turn of the milled knob, and the lens is automatically focussed correctly on the subject you wish to photograph.

The Super Ikonta distance meter is a complete departure from previous types, and is so strongly constructed that it cannot get out of order with ordinary usage. For touring, motoring and hiking the Super Ikonta is an ideal companion.

THE CAMERA WHICH DOES THE FOCUSING !

THREE SIZES :

No. 530, for 16 pictures $2\frac{1}{4} \times 1\frac{3}{4}$ in., Zeiss Tessar f/3.5 and Compur shutter . . . £16:12:6

No. 530/2, for 8 pictures $3\frac{1}{4} \times 2\frac{1}{4}$ in. (or $16 \times 2\frac{1}{4} \times 1\frac{3}{4}$ in.), Zeiss Tessar f/4.5 and Compur shutter . . . £17:0:0

No. 530/15, for 8 pictures $4\frac{1}{4} \times 2\frac{1}{2}$ in. (or $16 \times 2\frac{1}{2} \times 2\frac{1}{8}$ in.), Zeiss Tessar f/4.5 and Compur shutter . . . £18:15:0

VOL. LXXVIII. No. 2387.

WE have already reminded readers of the closing date for entries to the exhibition of the Royal Photographic Society, and we now offer a similar reminder for the London Salon of Photography. Wednesday, August 29th, is the last day for receiving pictures at the Gallery, 5a, Pall Mall East, London, S.W. We would also advise those submitting work to read the particulars given on the entry form most carefully, as any irregularity in procedure may invalidate the entry, and there may be no time to rectify any mistake made.

Submarine Artists.

Nassau, the capital of the British Crown colony of the Bahamas, seems to be, by all accounts, a submarine paradise for artists, for we read that artists are submerging themselves in the sea there, careening about among the coral reefs, and exploring the secrets of the vast under-water life which just here is very beautiful and fantastic. Hitherto it has been sufficient to spy on these coral gardens from the vantage of a glass-bottomed boat, but the more energetic explorers are now donning the diving helmet and working freely with their water-proofed cameras in a world of marine beauty almost unbelievable in detail and perfection. The coral is so wonderful and the living denizens are so brilliant and curious "that only the faithful trustworthiness of the camera can convince you of their reality." We can believe that the devotees of the moving-picture camera dart about in the translucent water, but when the enthusiastic writer tells us that painter artists also go down with their brushes and palettes to get

TOPICS of the Week

THE LIFEBOATMAN'S STORY.

An article on "Old Fishermen as Models for Picture-making" appears on another page in this issue.

the colours, and that it is no uncommon sight to see a paint-brush, which has escaped the submarine artist's hand, floating on the surface of the water—well, there are more things in heaven and earth, and in the sea under the earth, than are dreamt of in our philosophy.

Fire!

With modern colour-sensitive plates, a motor car, and reasonable opportunities of being on the spot, what a collection a specialist might accumulate of photographs of fires. And with some sense for pictorial effect and capacity for selection in a rapidly changing scene, how pleasing some of the resulting pictures might be. The other evening a gorgeous spectacle was presented by a factory fire on the fringe of West London. It was not just a mass of smoke with a base of flame, but in the shape of the smoke clouds as they formed themselves above the burning building, in their density from deep black to feathery whiteness, and in the astonishing colours—brilliant greens and sultry violets—which the conflagration presented there were pictures galore. It was astonishing how quickly the resources of Press photography were mobilised, and in addition to the cameras on ground level, two aeroplanes circled round the burning mass, coming down as low as possible, evidently for the purpose of taking photographs.

Photographers on Honeymoon.

The former rector of a village in Northamptonshire tells us that while he was at the rectory there many couples on honeymoon would make their way through the village, point their cameras—or surely their one camera—up at the church tower, and then pass obliviously on. They

always took one particular point of view, and they never troubled about any other treasure, pictorial or archaeological, that the village might have to reveal. We are left in some little doubt as to why the rector should suppose that the habit is characteristic only of honeymooners. Perhaps he was using the word "honeymoon," not in its usual restricted sense, but in the sense of "mooning around," as one can do whether one has a camera or not. However, this procession of honeymooners with cameras who pass through the village of Brington, near Northampton, had one good result, for they stimulated the rector himself to make a thoroughgoing photographic record of his village, which has historical associations with the progenitors of George Washington, and many other features of interest. Seldom can a village have been so excellently and exhaustively photographed and lantern slid as Little Brington by the Rev. H. O. Cavalier. The parish church

is rich in wood carvings, and to the reproduction of its old bench ends Mr. Cavalier has applied himself with extraordinary skill and success.

Coloured Newspapers.

A lecturer at the Royal Photographic Society told us recently that colour reproduction for printing purposes is likely to become more mechanical with the approach of printing inks of theoretical efficiency. One difficulty appears to be the blue. In order to get anything like decent reflective power with the blue it is necessary to use a green-blue; a pure blue cannot be got. If the so-called standard blue is used it is not actually complementary to the red filter. That is why the theoretical colour, if we could see it, would be rather green than blue. Slow progress is being made in the reproduction of colour photographs in newspapers. Here, of course, stability of colours is not a prime essential, for nobody wants to read a newspaper—even a coloured one—the

day after. As the President of the R.P.S. remarked, if the coloured pictures they are going to print in newspapers bear any relation to the colouring of the articles they write, the more fugitive the colours the better!

The Stage Version.

The photographer appears upon the stage in the excellent piece, "Magnolia Street," produced at the Adelphi in London, but as usual he exhibits methods of posing and so forth which scarcely linger in any studio to-day. He poses his lady in a most grotesque fashion, hand stiffly on the back of a chair, and so forth, and then declares that he cannot take the picture because it is evening, and such a subject as herself can receive no justice unless heaven's sunlight is available to illuminate her. The whispered remark of one of the characters is as illuminating as the sun itself: "Yes, he is a photographer, of course, but is he quite all right?"

READERS' PROBLEMS

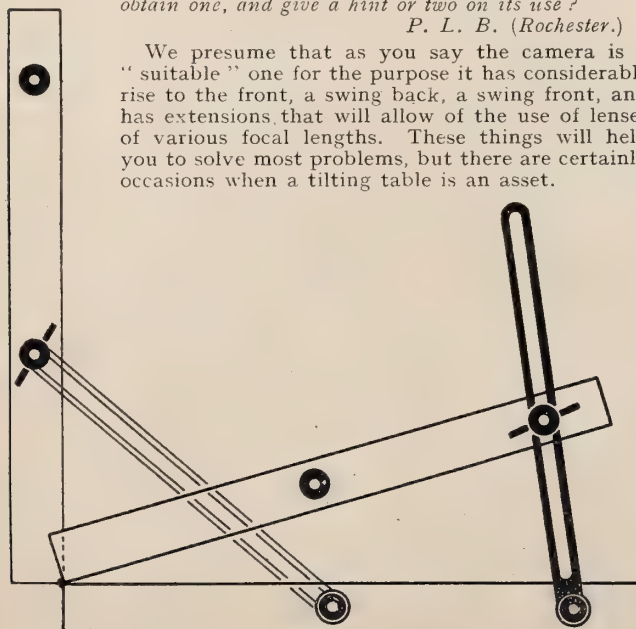

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

A Tilting Table.

I propose to go in rather seriously for all-round architectural photography, using a suitable half-plate camera with all necessary movements. I understand that a tilting board is a useful accessory, but have no experience of it. Can you tell me where to obtain one, and give a hint or two on its use?

P. L. B. (Rochester.)

We presume that as you say the camera is a "suitable" one for the purpose it has considerable rise to the front, a swing back, a swing front, and has extensions that will allow of the use of lenses of various focal lengths. These things will help you to solve most problems, but there are certainly occasions when a tilting table is an asset.

In interior architectural work especially it is advisable to have a tripod the legs of which can be secured so as to avoid slipping. Any attempt to tilt the camera by adjusting the tripod is fraught with danger, and it is to avoid this that the tilting table is designed.

We think you will have difficulty in obtaining one commercially. There was never more than a limited demand for such an article, and those who required one either made it themselves, or had one made to their own specification. The construction is simple, and we reproduce a diagram of one as recommended and used by Mr. Ernest Marriage, a well-known expert on architectural photography.

It is essentially two stout boards, preferably of clamped mahogany, hinged together as shown. The lower board is bushed so that it can be screwed down on to the usual tripod top, and it remains in a horizontal position. The upper board can be raised to any angle up to 90°. The camera is, of course, attached to this upper board by the usual tripod screw, so that as the board is raised the camera will be tilted so that the lens points upwards or downwards according to the way the camera rests on the board. In the extreme position the lens will point up to the roof or down to the floor.

The upper board is held at any desired angle by a slotted strut, or, what is advisable, by two such struts, one on each side. These struts work on the same principle as those used for supporting the back of a field camera, so that the whole of the necessary fittings can be obtained without any trouble commercially.

It is advisable to have two positions, as shown, for these struts. In the diagram the strut is in solid black in the position for a moderate tilt, and in outline in the position for the maximum rise. Sockets are permanent, but the struts, clamping screws and wing-nuts are removable. The whole apparatus packs flat, and takes up comparatively little space in the case.

A Talk to the Snapshotter

By "AN EX-LAGGARD."

THERE are thousands of us. We are the camera users who, after years of snapshotting, are still beginners. We make many exposures, which constitute a succession of blanks and prizes, and, when an extra special one comes along, the tragedy of it is that we know not why, and therefore cannot profit by our success.

Sometimes I would meet other workers who were much "slicker" than I in making their pictures; and yet with their speed they combined a certainty of result that roused my deepest envy. Whenever I stopped to wonder why, I realised, of course, that it was just sheer ignorance of photography that was the cause of the trouble, and at last I one day sat down to think it all out. At this stage one either throws up the hobby entirely or else sets about it in good earnest.

The Aid of Books.

I started on my career of emancipation by taking *The Amateur Photographer and Cinematographer*, and I also bought a copy of "Hand Cameras" and read it thoroughly. Ignorant though I was, I found in it a wealth of understandable information, easy to remember and use. Next I invested in a "Burroughs and Wellcome" Handbook with an exposure calculator fixed in its cover. Its pages contain a fund of valuable data, very clearly expressed, and the calculator cut out exposures by guess for good and all.

If you start your serious photography on these lines, you will have made a very profitable investment. Probably one of the first striking features you encounter as you con books for information will be the amazing difference in the speeds and types of negative material available. It has often been emphasised in this journal that the beginner should choose one, or, at the most, two different sorts of plates or films, as the case may be, and learn these thoroughly before trying others. This is the soundest advice possible.

We of to-day are very fortunate

in that the most sensitive, highly orthochromatic negative material possesses sufficient latitude for the veriest tyro to use successfully.

Causes of Trouble.

That is sufficient for the moment on that point. Next let us consider the view-finder. If, no matter how carefully you work, the picture on the negative is different from that which appeared in the finder, do not—as I was—be afraid to doubt the accuracy of the latter. Frequently, especially in the case of a cheap folding camera, the finder is not truly positioned, and so registers a picture with boundaries which are different from those appearing subsequently on the negative. A dealer will correct the error for you, or you can do it yourself by the method given in "Hand Cameras."

If you get fuzzy negatives, are you able to discover the reason? Actually, detection is quite simple. There are three possibilities: (a) if everything shows two—or more—images, you have moved the camera during exposure; (b) if only one object is blurred, and the rest of the picture is sharp, obviously it has moved; (c) if one zone of the picture is sharp, but all the rest, including the principal object, is blurred, you have focussed the camera incorrectly.

The cures for (b) and (c) are self-evident; as regards (a), one must remember that it is possible for movement of the camera to show on the negative even with so short an exposure as one twenty-fifth of a second. If, for instance, you simply press the trigger with the thumb, the rest of your hand being unsupported, the probability is that you will succeed in tilting the camera before the shutter closes.

Let us apply the law of action and reaction, and try another method. In addition to resting the thumb on the trigger, place the fingers *underneath* some part of the camera front. Then make the exposure by a squeezing motion in which one endeavours, as it were, to bring

together those parts in contact, respectively, with the thumb and the fingers.

In this way the hand, instead of the camera itself, takes the reaction of pressing the trigger, and movement is avoided. If your camera is fitted with a flexible wire release, that offers a sure way of avoiding the trouble.

Pictorial Considerations.

The art of composing a picture comes gradually, chiefly by learning from one's mistakes. From the first effort at intelligent photography, however, pay attention to the direction from which the subject is lit. Until a good deal of experience has been gained, the subject should be arranged so that the light falls on it from the front, or else from half-way between front and one side.

If portrait work is attempted out of doors, sunlight is too harsh for well-graduated results. Choose a bright but completely clouded sky and try to arrange the sitter facing the clouded sun. If you must, by reason of circumstances, work in the sunlight, avoid at all costs the photographing of a freckled person at close range.

Another point to watch from the start is the choice of background. It is useless, for instance, to photograph a white cat against a pale-coloured wall, or to snap the local sweep as he is passing the grimy background of the Town Hall. The use of a camera with a lens of very large aperture to a great extent obviates the need for a contrasting tone of background, because its shallow depth of focus makes everything but the object concentrated on so blurry and indefinite that a stereoscopic effect is obtained, and the object stands out from its surroundings.

If you cannot afford such an outfit, don't despair. By moving to the left or right, or perhaps by raising or lowering one's viewpoint, a suitable bit of contrasting background can nearly always be discovered.

It may be that your choice of apparatus will fall on one of the popular small film cameras of 3×4 cm. or 4½×6 cm. If so, you will naturally want your best efforts enlarged. It is well, therefore, to remember that the best enlargements are made from negatives which are not too dense. This entails the avoidance of over-exposure, and although modern plates and films allow amazing latitude in this respect, it is well to bear the point in mind.

It is essential, however, to carry out their development, etc. in exact accord with the maker's instructions, or the resulting picture will

appear hard, and lack proper graduation of the details.

Always aim to produce a negative in which the high-lights are not pure white nor the shadows deep black. Each should show some detail, while the tones in between should be nicely graduated. Read the criticism of prints which appears in every issue of this journal and you will soon grasp the principles which govern such things as the standpoint for exposure, the choice of printing paper to suit the negative, trimming of prints, and many other essentials.

If you have not the time—or lack the facilities—to do your own de-

veloping and printing, you are, by some standards, outside the pale of serious photographers. But, again, do not despair; choose a reliable dealer and let him see that you are something more than a mere button-presser. Assimilate all the knowledge you can and so be in a position to tell him exactly what you want done—and, moreover, *how* you want it done.

Thus you will soon find—as I did—that a desultory habit has become an absorbing hobby. So get to it, you photographic sluggards; half-hearted you will always be until you learn something of the fascinating “whys and wherefores.”

INTERESTING YOUNG CHILDREN in PHOTOGRAPHY

By R. M. FANSTONE.

If a child asks for a camera, do not say “Wait until you are older”; give it a start at once. The following note is topical at the present time.

YOUNG children often express a wish for a camera, and this wish should be gratified. There can be no doubt that photography is of great value to young people, a fact which is now recognised at the larger schools, and it can be equally useful in the development of the younger children. Photography trains the mind to the need for care in small details, and the inevitable result of non-compliance with instructions. Such cannot fail to be of value to any young child of normal mental powers.

It is not suggested that a young child of the age of seven or nine should develop its own films, although I have known of more than one case where this has been done successfully, after a demonstration by a sympathetic grown-up. There is no reason why the child should not print from the negatives upon self-toning papers. These are very simple to use, and no poisonous chemicals are necessary such as may endanger the child or other members of the household.

If it is decided to give a child a camera let it not be thought that “anything is good enough.” The camera should be of simple type, but it should be in good order, and capable of producing good results. One of the better class box cameras, fitted with a lens of larger aperture than that fitted to the camera of the older type, and with a view-finder which is

reasonably accurate, should produce a high average of good results.

A high-speed film of the ‘chrome type should also be provided, and with a little help, under-exposed films can be avoided. In the matter of elementary knowledge, I have found some young children more responsive, judged by the results, than some people of mature years.

Although a little guidance may be carefully offered with regard to subjects the child should be allowed to take what it likes. If the subject belongs to the “impossible” class, this may

be suggested, but no prohibition enforced. Experience will soon teach an intelligent child what photography can and cannot do, and far more rapidly than in the case of some grown-ups, who still “snapshot” under conditions which suggest a belief that the age of miracles is still with us.

A seaside holiday is a good time to start a young child on the photographic road. The light is good, subjects are plentiful, and there will be the encouragement of good results from the very start.

Rolleiflex

The Rolleiflex is as quick as the eye. As the eye automatically focusses from near to distant objects, so the Rolleiflex with practically the same speed can be focussed and adjusted. In one glance the screen picture, the focussing stop and speed adjustments are all under immediate control. Operation of the shutter is considerably simplified and accelerated by one lever for tension and release. The film wind acts like lightning, you cannot under or over wind, no slow and careful turning of a button. Those thrilling holiday incidents come and go in a flash—therefore the camera must work like lightning to bring success. The Rolleiflex with its high-power lens, fine focussing without the possibility of error and readiness for instantaneous use at all times makes it supreme as a holiday camera and for all-round photography.

Takes 12 pictures on 3½×2½ 8-exposure roll film for 1/-.

Specially generous exchange allowances for a new Rolleiflex. Ask us to quote.

Old Fishermen

as Models for Picture-making

By FRANK W. MURRELL.

WHEN one talks of something being "picturesque," there is usually conjured up in the mind a something beautiful. The implication may be of line, form, pattern, light and shade, or something more abstract—"atmosphere."

The latter is not always easy to secure in a photograph. Associations and romance are interwoven and must be suggested by including enough, yet not too much, material in the picture space. Leave a little of this atmosphere to the imagination of the beholder, and instead of a bare record of your subject you will make it picturesque.

If you are fortunate enough to be taking a holiday in a quaint fishing village, old fishermen will make fine models if you go about your hobby in the right way.

An old fisherman is a picturesque old chap—if you make him so.

A good plan is to

make friends with one or two of the local characters always to be seen loafing around the sea-walls or piers. Do not go to them with an air of superiority, or this will be the surest way of closing like an oyster all the possibilities of some charming pictures. Make their interests yours. Admire their skill in net-mending, and offer them a cigarette. This will induce a

"There she goes!"

planned to a certain extent in your own mind before getting to work. The position of the sun at certain times of the day in relation to your proposed setting should be carefully noted, your exposure also worked out by meter, and the shutter set before you get near to your quarry. This makes for ease of working and sureness of result when the right moment arrives.

Repairs.

free and easy spirit between you. Tell your victim what a fine picture he would make for your album, doing this or that, and promise him a picture. Manœuvre for an effective but plain background, and if possible get the lighting at right angles or facing the line of sight; keep up a general conversation all the time, and snap!

Each little episode or story picture should be

A coat of paint.

An interesting creature.

August 8th, 1934

HILL-

Some hints on making pictorial landscape photographs from heights.

A Downland Frieze. High Salvington, Sussex.

PHOTOGRAPHS from hill-tops are said to be disappointing, but there is really no reason why they should not be as attractive as any others if done well. To snap blindly at a huge view from a high vantage point is to place too much reliance upon luck, for the condensation of large spaces into small prints is a thing which needs a little care. Given a little common sense good results are almost certain.

To begin with, there should be something worth photographing, not so small as to be lost in the general landscape, and with some-

thing in the way of pictorial accessories to draw attention to it. A fairly dark foreground can do this very well. It prevents the eye from running out at the bottom of the print, and throws the lighter distance well back.

A few trees treated after the manner of a decorative frieze by photographing the valley through them makes a very effective picture, but the trees must not look "hung up" by being cut off at the foot. This is an "upright" subject. Water photographs well from above, particularly in the evening with a good sky. A little bit of dry land at the foot of the print gives the eye a "jumping-off" place.

Mist effects are occasionally good, but one does not want too much of it or the contrasts

Dorset Cliffs.

The Valley Farm.

will be too flat. In long-distance work the more contrast the better, within reasonable limits. An attempt should always be made to retain the clouds, and there is no better way of doing this than by using a filter—quite a pale one will do. Clouds themselves are often worth an exposure.

On the hill-tops, as in other places, the "little bit" is sometimes more

TOPS

By D. AUSTIN.

fascinating than the big expanse. It is well to keep the eyes open for what is near at hand as well as for what is far away.

Technical difficulties are practically *nil*, but it is wise to rest awhile after a stiff climb before exposing, or the hands may be a

Corfe Village.

Evening over the Cliffs.

trifle unsteady. ♦The exposure may be cut to about half the normal unless the foreground demands more. This need worry no one. Most of the illustrations to this article were made at $f/8$ on fast panchromatic stock, giving $1/25$ th sec. with a $\times 4$ filter. Worked out, this comes to about $1/25$ th sec. on roll film at $f/16$ —the usual working speed of the simple box camera. Development may be a little longer than normal so as to give the little added contrast which yields a brilliant print.

There is no doubt that an enlargement is preferable to a contact print for this class of work. Details show up to an extraordinary extent, and in spite of the pictorialist's hands lifted in horror at the idea,

there is a lot of fun to be got out of a long-distance print and a magnifying glass. If the photograph is really sharp it is surprising how much can be discovered in the various parts of the distant view when examined in this manner.

the subject taken from the same high viewpoint but with a very long-focus lens. Provided the negative contains detail sharply rendered, and a fine-grain developer has been used, enlargements of good technical quality will be secured.

In conclusion, it may be remarked that on days when the call of the hills cannot be obeyed, there are many good photographs to be had by climbing to the roof of a high building in any large city. Many subjects so taken are the pictorial equal of those taken from hill-tops, and, in addition, a glorious breath of fresh air can frequently be secured from a lofty roof just as one gets in the country from a height.

Rain threatens.

From this inspection it will be found that many pictorial "bits" can be isolated, and if the negative is subsequently placed in the enlarger, these bits can be enlarged up to make pictures that in some cases may excel in composition and interest the whole view. They are, in fact, equivalent to portions of

From a City Roof.

How I make my EXHIBITION PICTURES

No. CCXLI

—
Mr.
D. C.
ROWLETT.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"MY first introduction to pictorial photography was a visit paid with a friend to one of the R.P.S. annual exhibitions at Russell Square. As an amateur with some training in art, which the claims of business had seriously curtailed, I somehow acquired the notion that a camera offered an easy and trouble-free method of satisfying some, at least, of my pictorial leanings within the limited spare hours at my disposal.

"My approach to photography being *via* painting it was perhaps natural that I should be immediately attracted by the power of control offered by bromoil and bromoil transfer. All my early prints were by these two processes, and transfer remains my favourite tinting method to-day; though I fear experience has caused me to revise some of my early ideas as to the value of control as I formerly understood the term. Certainly I find nowadays that my most successful transfers

are almost invariably those in which the process has been used most nearly 'straight,' though, of course, some minor control of tone values and massing is going on all through the inking, almost unconsciously.

"It is always difficult for a bromoil worker to persuade the rest of the photographic brotherhood that such a thing as a straight bromoil can exist. The plain truth, of course, is that the bromoil worker has, by force, to take more trouble over exposure and development, both of negative and print, than the bromide printer.

"Though bromoil transfer remains my usual process I no longer use it exclusively, turning on occasion to Carbro, and less often to bromide, when the special qualities of these printing processes seem to accord better with the demands of the subject.

"My negatives are all of $3\frac{1}{2} \times 2\frac{1}{2}$ size, made with what must be one of the very earliest specimens of Adams's Minex reflex, picked up second-hand. Formerly I used panchromatic plates exclusively, but a lengthy experience has finally convinced me that I can sometimes get better results with contrasty, long-scale subjects from orthochromatic plates.

"In general, my conception of the final print dates from the time I expose the negative. I see the subject as a high-key transfer, or as a low-toned carbon print, or in whatever other form seems most nearly to suit that particular arrangement of nature. Exposure and development of the negative are then proceeded with, keeping this end always clearly in view.

"I use an exposure meter, but only as a guide to the actinic value of the prevailing light. Actual exposure times may be less or very much more than those indicated by the meter, as the subject and intended treatment may dictate.

"My bromoil and transfer methods are normal, but I have a preference for fairly high key work on a white paper base. I use Sinclair's bleacher and *encre machine* and *taille douce* inks. My transfers are usually made with two pulls through the press, sometimes three. In Carbro I rather prefer the method of development on to the original bromide print, at least for exhibition work. This method seems to give an added richness. Most of my Carbros have been made with Vandyke brown, which has a rather more pleasing colour than the sepia tissue.

"As regards choice of subject I try to keep out of a groove as far as possible, but subconscious preference has a way of coming out, and I find on looking through a number of prints that most of them seem to come within three categories—open landscape with sky, figure studies, or old streets and buildings. I make a very occasional portrait, usually of the 'character' variety, since I feel that in portraiture proper the amateur has no hope of competing with the professional."

COURTYARD IN TAORMINA.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

"AUTUMN," by W. Cocks—No. 1 of the prints on the opposite page—has a very good sky, and the two masses of foliage, that of the tree on the left and the hedge on the right, display a good relationship the one with the other. The sky tends to lend a pictorial attraction to the presentation, and the relationship of the trees, taken in conjunction with their pleasing shape, affords the elements of a good composition.

Errors of Judgment.

The print, as a whole, is inclined to flatness, and appears to be appreciably overprinted. The defect, perhaps, is not so pronounced in the reproduction as in the original, but it is discernible, and much of the luminosity the sky should possess is lost on account of the degradation of the sky tone.

It is not altogether a matter of making a lighter print, for, although that would be an improvement on the present rendering, it would not counteract the lack of vigour and strength. The sky would be better, but there would scarcely be a sufficient depth of tone in the landscape. What is needed is a printing paper of more vigorous character, or, alternatively, the development of the negative should have been allowed to proceed for a longer time.

In this latter event, the same grade of printing paper would have provided a print of an adequate degree of contrast, but, as the negative has been finished off, the former expedient only is available. If adopted, it would permit the landscape to retain its present depth of tone; its detail would be somewhat more marked; and, at the same time, the sky, while retaining all its gradation, would be rendered in its proper value.

The whole thing would present a stronger appearance, and the rendering would be more in accordance with the visual impression.

Foreground and Distance.

Attractive as the arrangement of the composition may be, it would have been better if the gate in the centre had been opened before the exposure were made, for it would afford a better interconnection between foreground and distance.

At present there is a bit of a jump between the two, and there is no definite linking up. The opening of the gate would provide the needful link, and then the foreground would be connected with the distance. The latter, at present, joins up very well with the sky, and, with the revision applied, the whole thing would be interconnected in all its essential parts, and unity in a higher degree would prevail.

The arrangement in No. 6, "Toilers of the Soil," by W. Caig, is of quite another type, but the connection is there, and the advantage derived therefrom is easily seen. The edge of the line formed by the uncut corn leads from the right-hand margin of the picture to the group, from it to the farmhouse in the distance, where the lines of the hillsides meet. From them, there is a natural step to the sky, and from bottom to top and from right to left connection is established.

Inasmuch, the picture is excellent, and the way the group has been caught, too, is good, but, compared with No. 1, the sky is regrettably lacking in tone, though what there is is better than none at all.

Blue Sky and White Paper.

A blue sky, or even one that is covered with the lightest of fleecy clouds, cannot be viewed as properly represented by the white tone of the paper base of the print.

No matter how bright it seems, there is always the possibility that something of a bright tone and nearer to hand may exhibit a greater brilliance, such as, for example, a whitewashed wall in full sunshine. Even in the absence of any such note to furnish a comparison, a sky that is represented by a blank white does not strike a note of truth, and it cannot be too strongly urged that quite an appreciable degree of tone is necessary to convey a true impression of the sky.

A glance at No. 5, "Castle of Chillon," by C. F. Knight, reveals a similar defect, and, in consequence, the sunshine on the castle walls does not tell so well as it would were there a proper tone in the sky. Besides this, the subject suffers somewhat from the intrusions at the top and left-hand side, and, while it may have

been the only one available, the viewpoint seems too near.

Restricted Viewpoints.

Where a viewpoint is restricted, an interchangeable wide-angle lens often proves a boon, but if not at hand, it is better to take a little trouble to find a more satisfactory standpoint than to make an exposure foredoomed to failure.

It is better to include more than is wanted than too little, and, in the case of No. 4, "Low Tide, Clovelly," by H. Hebdon, this, whether intentionally or not, has been done. There is more foreground and more on the right than is strictly necessary, and a trim of a quarter of an inch from the base, and half an inch from the right appreciably improves the composition. A full eighth of an inch from the top, to exclude the sky, might also be removed, but more could scarcely be taken without inviting a suggestion of over-restriction.

On the other hand, and while it is perfectly true that almost the same result could be obtained by advancing the viewpoint a little, it is unlikely that the arrangement could be so precisely determined before exposure as subsequently, and the extra margin is useful inasmuch as it enables those faults, which often happen just about the edge, to be excluded.

A Margin for Trimming.

Fogged edges, which arise from allowing a film to slacken off during its removal from the camera, provide an instance of the kind of fault that is in mind; but there are also tank markings and the like which can be removed if a sufficient margin is allowed for trimming.

The main advantage, however, lies in the facility with which the composition can be adjusted, and the device appears to have been made use of in No. 2, "Collins Street, Melbourne," by H. Brush. Here, the placing of the illumined tower is so well judged in relation to the rest and to the boundaries of the picture that it is almost certain that the print was intentionally trimmed to obtain it.

It does not seem that it needs any alteration at all, and, as the night effect was well seen, and no less well recorded, a most successful result has been secured. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"ALL THE WORLD BEFORE THEM," by S. G. Genty.

WHETHER this subject was prearranged or a chance opportunity promptly seized is not clear from the picture itself, but it is evident that, however obtained, an excellent judgment was exercised in the selection of the precise moment for making the exposure, for not only are the figures shown in a pose that is full of action, but they are also spaced very well in relation to each other and to their position in the picture space.

Pose and Action.

In the precincts of a station, where the roof extends over most of it, it is, of course, practically impossible to secure anything in the nature of an effect of sunshine. Its absence is felt, but is, to a not inconsiderable extent, compensated by showing the figures in light against a much darker setting.

There is, too, a certain subtlety of gradation arising from a diffused light source. This is well brought forward, but would be absent under the more direct illumination of sunlight, and, as the latter is not incorporated, nor is there any expression of any other mood of nature to take effect as the pictorial motive, the scale in which the figures are shown may be regarded as acceptable.

If there were anything in the nature of an effect, it is probable that it would necessitate a reduction in their size, or a sense of competition might be occasioned between the figures and the effect, which would impair its expression as the motive; but, as no effect is existent, the scale is permissible, and, in fact, their size enables the human interest excited by the figures to rank with an effect as the integral attraction.

One of Three.

The fact that they are represented on so large a scale, however, renders it imperative that their poses shall

be beyond criticism. They have been caught in a period of arrested motion, but one which indicates that movement is in progress; or, put in another way, their poses are suggestive of action.

An impression of the swing of rapid walking is conveyed, and, that being so, the condition precedent is satisfied, though, as a general rule, a figure is more satisfactorily shown

than finish off the group. Their relative attraction, in the pictorial sense, is expressed in the order in which they have been numbered. The figure (1) claims the greatest share of the attention because, in the first place, he is the biggest; in the second, because he is the most strongly placed; and in the third, because in his figure are contained the greatest extremes of

tone.

The first and third of these reasons are self-evident and obvious at a glance, but his position is the most forceful on account of the fact that his head more closely approximates one of the recognised strong points of a picture—the points of intersection formed by divisions of thirds—than do either of the other two elements in the group.

Moreover, his pre-eminence is still further emphasised by the fact that he is the leader, and foremost in the direction of the line of movement. Next in significance comes the figure (2). Her position, being nearer the centre, is weaker, and, appropriately enough, the contrast of tone is less than in the other. She has sufficient force of attraction to maintain her importance as the secondary item of the group, while the dog, as the third element, is of appreciably less significance, and is only necessary to complete the numerical progression, three elements composing better than two.

In a group of this kind, where the items are in a definite order of importance, a third seems essential to establish the significance of each element. In a group of two, one is more important than the other, or they are equal, but, if a sequence be felt to be desirable, a third is needed.

A sequence, such as occurs in this instance, generally has the effect of imparting a greater sense of order than where there is no definite progression, and it is exceedingly fortunate that it happened in this case.

"MENTOR."

facing the viewer than when seen from the rear.

It will be observed that the group is composed of three elements, i.e., the man (1), the girl (2), and the dog (3). To accord with our sense of fitness, or, in other words, to satisfy the requirements of the rules of composition, it is necessary that one shall be predominant.

An inspection of the print reveals that the figure of the man seems the most important; the girl comes next, and the dog does not seem to do more

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

SUNRISES AND SUNSETS.

SIR,—In reference to the "Topic of the Week" in "The A.P." for July 11th, regarding Cromer sunrises and sunsets, more than forty years ago photographs were taken by me from the cliffs at Saltburn, Yorkshire, of a sunrise and a sunset, in each case looking across the sea. Similar photographs may be had at Whitby, and amongst my old negatives is one of such a sunset, if my memory be correct.—Yours, etc.,

F. CROFT.

DYE IN FILMS.

SIR,—With reference to the query raised by L. M. in "The A.P." dated 27th June, regarding dye remaining on film negatives after prolonged washing, it might interest him to know that on the instruction sheet issued with Agfa Superpan film it is recommended that one or two drops of ammonia added to the final wash water will remove all traces of blue dye. I have myself followed this advice with both Kodak Panatomic and Agfa Superpan film, and find that any remaining blue dye disappears completely, leaving the film beautifully clear.—Yours, etc.,

E. G. DAVIES.

DISPENSING WITH THE NUMBER WINDOW.

SIR,—"Optimist" suggests that the winding off of the film should be regulated by some audible device; in the earliest roll-holders of the late 'eighties, for negative paper with no backing paper or numbers, there was, of course, no window, and one wound off until a certain number of clicks had been heard; the system answered well enough with care. Those were the days of stand cameras, and mine was $7\frac{1}{2} \times 5$ with a spool for 50 exposures, which had to be cut up before development, and then the fun began. With the modern films, developed in the strip, this difficulty would not arise.—Yours, etc.,

W. S. T.

A MINIATURE CAMERA.

SIR,—Is it allowable for an amateur with no axe to grind to give a pat on the back to an English-made miniature camera? As a result of the extensive advertising I investigated the claims of the tiny camera, and came to the conclusion that the ciné-film type is too small, too heavy, too expensive, and too difficult to use, and that the 16-on-No.-120-film is the ideal half-way house for the amateur who wants a companionable pocket camera. I bought one of those much advertised with an f/2.9 lens, but could not get passable enlargements to postcard size unless I stopped down to f/16. Changing the camera for another similar model, I found an improvement, but not the quality I wanted. I then bought a Dallmeyer "Dual" with f/3.5 lens, and have had no further trouble. This camera was one of the pioneers of the 16-on-No.-120-film, and is made, I understand, by Messrs. Newman & Guardia. It is very

light, and is generally built in the way Sibyl cameras are always made, and gives pleasure to handle, in a way which cannot be said of many of the foreign models of this size at any price. The "Dual" is the only British effort in the high-grade class, and in my opinion it beats all the others, but as it is apparently not advertised it appears to be almost unknown.

To avoid disappointment, I would advise all purchasers of 16-on-No.-120-film cameras to test their first film by supporting the camera on a firm table and exposing on, say, a lace curtain, at each of the marked distances. The resulting films should be enlarged with a precision enlarger, and if a postcard enlargement is not reasonably sharp, the purchaser may conclude that the lens is of fair but hardly first-class quality, or that it is not accurately fitted.

Others who have been troubled with fog on pan. film through the red window may like to know that Messrs. Peeling & Van Neck of Holborn Circus are light-trapping my "Dual" camera at a cost of five shillings.—Yours, etc.,

R. E. DICKINSON.

FILM CONTAINERS.

SIR,—Users of 16-mm. ciné film may be interested to know that an empty two-ounce round tin of Barney's tobacco makes a perfect holder for a 100-ft. spool of film. The fit has to be seen to be believed, and there is just enough extra depth to take a moistened felt pad covered by a disc of perforated celluloid. A one-ounce tin will take a 50-ft. spool, but the fit is not quite so exact.

With the tin you get a rubber band (with tab) of the right size for keeping the film in position on the spool.

I have no interest in the makers of Barney's other than that of a satisfied user of their tobacco—and tins.—Yours, etc.,

CHARLES W. WILMAN.

CAMERA PRICES.

SIR,—The letter from "Nomad" in your issue of July 4th, regarding camera prices, has surprised me not a little. "Nomad" claims to be a veteran photographer, but the reasons he gives for his objections hardly seem to be the result of experience.

To my way of thinking, cameras to-day are something more than just boxes, lenses are not just bits of ground and polished glass, they are the product of a highly scientific optical process; Compur shutters are truly wonderful things, having the precision and delicacy of watches.

When one considers the modern miniature precision camera, with all its gadgets for self-timing, automatic winding, etc., and the fast lenses and fast shutters, can one really say that the prices asked are too high? Remember, when you buy a precision camera you pay for the knowledge and experience which made the instrument possible.—Yours, etc.,

ROY BURRELL (Philadelphia, U.S.A.).

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, August 8th.

Leigh Lit. Society P.S. Mystery Ramble.
Rochdale P.S. Holiday Experiences.

Thursday, August 9th.

Hammersmith H.H.P.S. Discussion on Exhibition of Holiday Snapshots by H. L. Wainwright.
N. Middlesex P.S. Discussion—led by B. C. Woodcock.
Oldham P.S. Print Competition.

Saturday, August 11th.

Accrington C.C. Gorpel and Thursden Valley.
Bath P.S. Newton St. Loe.
Bristol P.S. Hanham.
Exeter C.C. Teign Valley.
Hackney P.S. Blatchworth Heath.

Twickenham P.S. Discussion: Plates v. Films.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
**LESS ADVANCED
WORKER**

SELF-TONING PAPER.

MY first prints—such as they were—happened to be made on the albumen paper which all photographers were then using, for the excellent reason that there was little or nothing else to use. A day or two ago I was asked where albuminized paper could be obtained, and I had to reply that, as far as I knew, it could not be obtained anywhere in this country.

Let me try to be learned for a moment, even if I am wrong, as learned people often are. This paper was originally coated with the white of eggs—albumen. The smell suggested as much. But owing to the demand for eggs for election and other purposes, albuminoid—albumen-like—substances were prepared from certain animal

in perfect condition. Yet some of us fell for it when we were told how to do the toning and fixing in one operation with a “combined” bath. How we did fall, to be sure. And so did some of the prints, as time proved.

Then came the self-toning paper. No gold bath now. The gold, as we were told, was in the paper. We are still told so. I do not deny the fact; but I do not advise anyone, even with gold at its present price, to try to extract the precious metal from self-toning paper, and grow rich thereby.

One of my earliest investments in this kind was the purchase of some paper which I believe was bestowed upon us by America. It gave beautiful prints. I made one,

tissues, and that accounts for the letter “i” instead of “e” in albuminized.

Then appeared the Ilford P.O.P., which was coated with gelatine, and promptly and deservedly swept the old egg paper into oblivion. I made hundreds, nay, thousands of prints on this Ilford paper, which we generally bought in large sheets and cut up ourselves. This was supposed to be economical, but in my hands was disastrously the reverse.

The procedure was to print by daylight till the image was considerably darker than it should be when finished; wash till there was no longer any sign of milkiness in the water; tone in a bath containing gold chloride; wash again; fix in plain hypo; and wash again—very much. The prints on glossy paper were generally glazed by squeezing on to glass or slabs.

It was rather slow work. The good amateurs in those days—and how wonderfully good they were—did not mind work, or spending any amount of time in turning out a good job. Some of my own earliest P.O.P. prints are still

less than a quarter-plate in size, which was hung at the R.P.S. exhibition, although to-day it would not stand an outside chance in “The A.P.” Beginners’ Competition. Before the exhibition had run a week, that print had developed measles, or something worse; and I surreptitiously replaced it with a platinum print, to the furious indignation of an editor who got to hear about it.

After which long preamble, I wish to remind beginners that there are several self-toning papers available to-day, and to commend them as decidedly worthy of attention and use. I have just spent some time in experimenting with a dozen different brands. There are many more than this on the market, and when I refer, as I shall do, to some makes by name it must be understood that I am in no way giving them preference, or specially recommending them. It is only that of these I have practical knowledge.

Some self-toning papers do not inspire me with affection. On the contrary, I definitely hate them. Others are beautiful. I mention this because it would be risky for a

August 8th, 1934

beginner to form an opinion on self-toning papers as a class, from his experience of one brand he happened to try. He might be unlucky. It is a simple and inexpensive matter to try several.

Besides, tastes differ. I dislike a colour that is too red, and especially one that hints at yellow. I dislike a glossy surface for these prints. I dislike a mauve paper. What I do like is a good brown, cool rather than warm, on a cream or white matt paper. There are several self-toning papers on which I can get just what I want, and get it easily.

The usual slogan for self-toning papers is "simplicity." While I agree, in a general way, with this claim, I would give a word of warning. I know of no other class of papers with so many idiosyncrasies. Sorry I cannot think of a simpler word. Gaslight papers, say, are very much of a muchness, and you can treat them all in just about the same way without their resenting it. Not so self-toning papers. Each one has its own funny ways and characteristics, and must be treated accordingly, or it will not behave at all nicely. The instructions accompanying any given make must be studied and most carefully followed. Slipshod procedure will not do at all. Self-toning paper asks very little of you, but that little it must and will have.

One of the first things it asks is a suitable negative. This must not be flat and weak, but must have good contrast. You cannot get an ultra-contrasty self-toning paper to use with a thin ghost of a negative. There is a Vigorous Seltona paper, and the first illustration shows comparative prints on Normal and Vigorous Seltona. The difference is more marked in the originals than in the reproduction, and this more contrasty grade is very useful to keep at hand for use when a negative is nearly but not quite strong enough.

The other illustration suggests the type of subject and negative for which a self-toning paper is quite suitable. The original is a good sepia colour, on a cream matt paper, and would have no occasion to blush in the presence of a carbon print from the same negative.

Next week I hope to proceed to some practical information as to requirements and manipulation.

W. L. F. W.

Making Press Subjects By JOHN H. VICKERS.

SOMETIMES the budding free-lance bemoans the fact that there never seem to be any suitable subjects for the Press in his neighbourhood. He looks forward to his holidays and thinks he may find

something ready to hand—bathing belles, and so on. He returns home with nothing that is saleable. Why? Well, he probably does not realise that most good free-lance pictures have been carefully thought out, and very often arranged. One seldom comes across the attractive bathing belles which one sometimes sees in the papers. Attractive costumes have been bought for the occasion, pretty rocks and so on have been selected on which to pose the models, and due care has been taken with the lighting.

But one need not go from home for subjects. The heat wave has been topical as well as tropical, and fresh ideas in connection with it are always welcomed by the picture papers. The illustration accompanying this article is rather a change from bathing girls, and is therefore more likely to appeal to an editor, as it shows originality. A photograph should also have a short, crisp caption to enhance its value; and if it contains a little humour, so much the better.

Coming down one morning I noticed that the candles had felt the heat wave, and were looking very ridiculous. "Ha!" I thought, "this ought to make a Press subject." I arranged them and re-arranged them until something useful emerged. Then a caption had to be thought out, and one with a human touch, if possible. Certainly the two tall candles might be father and mother and the four small ones their children. Obviously they had all had too much sun to be good for them; so the final caption reads as given.

"Now children, no more sun-bathing!"

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

"The Art of Colouring Prints."
In spite of a considerable interest in various methods of hand-colouring prints, the literature on the subject is meagre and out of date. Hence there should be a welcome for the volume under the above title, written by J. Carroll Tobias, and published at \$1.50 by The American Photographic Publishing Co., 428, Newbury Street, Boston, 17, Mass., U.S.A. The subject is handled comprehensively and skilfully, and expert instruction is given on the various procedures involved in working with transparent and solid oil- and water-colour, pastels, wax crayons and so on. The information is extended to the various methods of colouring lantern slides, and a short chapter deals with monochromatic toning and dyeing. In our opinion the book is likely to rank as the standard work on the subject.

"Movie - Making Made Easy."
Under this title a book by William J. Shannon is published by the firm of Moorfield and Shannon, 66, Elm Place, Nutley, New Jersey, U.S.A. The price, post paid, is 2 dollars. It certainly covers a wide field, and while some parts are of an elementary character it also deals with such advanced matters as sound films, make-up, colour films, animated cartoons and microscopic work. Many illustrations are reproduced from very crude sketches, but serve their purpose. From such a mass of information as the book contains it is certain that any amateur cinematographer will find much that is useful to him.

From The American Photographic Publishing Co., 428, Newbury Street, Boston 17, Mass., U.S.A., we have received Nos. 7 and 9 of their series of photographic handbooks. They are both by Frank R. Fraprie, and deal respectively with "How to Make Lantern Slides" and "Practical Retouching." The subjects are handled clearly and comprehensively, with necessary illustrations and diagrams; and the only suggestion for improvement we can make is that they would be all the better for an index. The published price of these handbooks is 50 cents.

The Photographic Society of Ireland hope to hold an Exhibition, open to members only, from November 26th to December 1st inclusive. There will be four classes: 1, Pictorial and Architecture; 2, Portraiture; 3, Nature Study and Still Life; 4, Lantern Slides, Colour Photography and Transparencies. Two Awards and one Honourable Mention will be offered in each class, and, in addition, "Werner" silver and bronze medals for the best pictures taken on the summer outings. It is hoped to hold an Art Union Drawing in connection with the exhibition.

An alteration has been made in the date of publication of "The Pathscope Monthly," which makes it more convenient for securing prompt information of the current Gazette film. This publication of Messrs. Pathscope, Ltd. (5, Lisle St., Leicester Square, London, W.C.2) will now appear on the first of each month. It costs only 2d., and should be studied regularly by everyone interested in any way in 9.5-mm. films. Particulars and entry forms are given for the National Amateur Ciné Contest, which runs until the end of September.

An exhibition of cinematography will be held at the galleries of the Royal Photographic Society, 35, Russell Square, W.C.1, during the month of November next. The exhibition will comprise apparatus, stills and films. A feature of the exhibition will be a series of lectures on various aspects of cinematography, professional and amateur, by eminent authorities. In conjunction with the exhibition, a sub-standard film competition will be held, open to amateur and professional workers. There will also be a class for amateurs only, in which entries will be limited to films not exceeding 100 feet 16-mm., or its equivalent in other sizes. Films accepted by the judges will be shown during the period of the exhibition and will be awarded certificates. A plaque will also be placed at the disposal of the judges for the most meritorious film submitted in each class. Further information may be obtained upon application to the Secretary at 35, Russell Square, W.C.1.

Those readers who have sung the praises of the "Exakta" Miniature Reflex camera will have noted the improved model which has now been put on the market. This, in addition to the features already well known in connection with this camera, such as the reflex mirror action and the self-capping focal-plane shutter, has now an ingenious auxiliary control which has been adapted to the shutter, and by means of which slow exposures from 1/10th of a second to 12 seconds can be given; or, with the delayed-action control, speeds from 1/10th of a second to 6 seconds. The delayed-action control allows 12 seconds to elapse after the release has been pressed before the shutter operates. The prices range from £18 10s. with Ihagee anastigmat f/3.5, to £26 with Zeiss Tessar f/2.8. Telephoto lenses are also obtainable for use with this camera, and are, of course, easily used with the reflex principle of the instrument. It is obtainable from Messrs. Garner and Jones, Polebrook House, Golden Square, W.1, who will supply an illustrated booklet, dealing with the "Exakta," free on application.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, August 31. Rules in the issue of July 25. Derby P.S. Jubilee Exhibition.—July 21-August 12. Secretary, E. W. Hiscox, "Beechfields," Louvain Road, Derby.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15. Application for entry forms (British Isles) to W. R. Anderson, 3, Meadow Road, Beeston, Notts, and for Overseas entry forms, T. Finch, 47, Herbert Road, Nottingham. (Overseas papers please copy.)

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31-September 15. Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

South African Salon.—Held in Johannesburg from August 20-25. Secretary, South African Salon, P.O. Box 7024, Johannesburg, South Africa.

Toronto Salon.—Open, August 24-September 8. Particulars from W. H. Hammond, Salon Secretary, 2, Gould Street, Toronto, Ontario.

Hong Kong International Salon (organised by Hong Kong University Amateur Photographic Club).—Open, September 24-30. Further particulars from Secretary, Hong Kong University A.P.C., Hong Kong University, Hong Kong.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6; sending-day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

"232" and "Sandom" Photographic Competition for Pictorial Subjects. No entry fees. Valuable prizes. Full details and entry forms from "232" Photographic Competition, 38, Wood Street, London, E.C.2.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26-September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowderska, 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr, 69, Antwerp, Belgium.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Hints on Establishing Continuity in Holiday Filming

By
S. E. L. M.

So far as amateur work is concerned, lasting satisfaction can seldom be achieved without good continuity. How this quality may be introduced and developed is discussed in the following article.

THERE is ample evidence that a great many beginners commence their camera work by casually filming subjects which, in themselves, are of particular appeal. Such filming is not entirely aimless, since there is usually a very strong intention to retain on the celluloid some of that appeal possessed by the original subject.

Unfortunately, little of this can be captured or retained by casual methods. The tendency is instead to present what at best can only be described as a good photographic record.

It is not denied that some improvement will be effected immediately the worker becomes familiar with the business of editing; but even skilful assembly is quite unable to present a good film without proper continuity.

In the first place, it must be remembered that easy continuity depends upon every shot being cut to an effective length. This, of course, can be controlled in the editing stage; nevertheless, the action must be so directed that it will approximately coincide with the ultimate cutting.

Then—as the continuity of some films depends upon image relationships, whilst that of others depends upon simple titling—it must be recognised that there are different categories of continuity. The pseudo-professional play-film, for example, makes simple use of progressive action—which may involve little or no cinematic skill on the part of the director. Amateur holiday films, on the other hand, demand skilful handling and assembly if they are to rise above the level of casual shooting.

Documentaries and travelogue films make use of yet another type of continuity—this time dependent for the main part upon an intelligent use of titles.

Films conceived from the abstract method of approach are in much favour with mature and experienced

amateurs. Here the continuity is almost entirely filmic, involving skill and vision on the part of the director.

It is necessary, too, to know in advance something of the particular action-material which the camera is likely to encounter "on location." Just as no shot can be assumed without a previous assurance that the subject-matter is actually available, so must the utmost use be made of continuity shots where it is established that adequate facilities exist.

Provided, then, that the ultimate character of the film is clearly fixed in the mind of the enthusiast, this problem of continuity is reduced to very simple proportions. Hence, if

the purpose of a film be to preserve the happy memories of a family holiday, medium shots associated with personal close-ups will usually suffice to establish the continuity.

In a travelogue or documentary film, it is not always effective to cut back to these linking close-ups, the treatment indicated in such cases being to make the film action definitely progressive and to point the connections by means of lucid captions. Such captions must come in at just the right moment; and, since each caption must be closely related to others immediately adjacent, it is necessary to avoid long cutting and bad assembly.

The dusty condition of the Row at the present time provides attractive effects for action subjects on sunny mornings.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Reticulation.

What is the cause of the crinkled appearance of the negative sent? I have had the same trouble on many occasions. S. A. F. (Tamaie.)

The trouble with your negative is known as reticulation. It is generally the result of transferring the negative from one solution to another which is either considerably higher or lower in temperature. Once it has occurred, there is no remedy, and this is unfortunate, as the negative you send is otherwise of first-rate quality. From a statement in your letter we gather that you may perhaps dissolve hypo just before use. If so, this may be the cause of the trouble, as the dissolving of the crystals lowers the temperature considerably.

Wynne Meter.

I have been given a Wynne exposure meter, but without any instructions. Will you forward me an explanation of the method of use? D. H. W. (New Cross.)

It will be necessary for you to get full instructions for using the meter, and also the latest speed list to go with it. You should be able to get both from a good London dealer, but the address of the makers is The Infalible Exposure Meter Co., Wrexham.

M.Q. Developer.

I send a formula for an M.Q. developer. When I mix it the solution turns black. When I mix an amidol solution it is a pink colour. Can you explain this? R. W. B. (Newport.)

We have never heard of such a thing as a solution of the kind you specify turning black, or being anything but perfectly clear. Amidol has occasionally a slight pinky colour, but it is never really noticeable, and it is generally as clear as water. As the only thing that would be used in both the M.Q. and the amidol solutions is sodium sulphite, we might suspect that there is something wrong with what you are using.

Club Addresses.

Can you give me the address of a photographic society in Kingsbury, Wembley, Edgware or Hendon? C. W. R. (London.)

We know of no photographic societies in the particular districts you mention, the nearest being the Kilburn and Willesden Photographic Society, the Secretary of which is Mr. H. F. James, of 59, Okehampton Road, Kensal Rise, N.W.10. The next is the Harrow Camera Club, the Secretary being Mr. C. W. Johnson, 4, Shepcote Road, Harrow. We trust that one of these will suit you.

Colour Process.

What is the address of the makers of the Autochrome plate? What is the simplest form of colour photography? Does a screen or filter have to be used? L. C. S. (Bromley.)

The agents for the Autochrome plate are Messrs. Thomas K. Grant, Ltd., Polebrook House, Golden Square, London, W.1. We do not know of any simpler colour process, although this is not the only one of its kind. The screen is in the plate itself, but a filter has to be used on the lens. It is not a colour-print process, the result being a positive colour picture on glass.

Developer for Chloro-Bromide.

Can you give me an M.Q. formula suitable for chloro-bromide papers? S. C. L. (Leatherhead.)

The following will answer:

| | | | |
|-------------------|----|----|---------|
| Metol | .. | .. | 5 grs. |
| Hydroquinone | .. | .. | 40 grs. |
| Sodium sulphite | .. | .. | 1 oz. |
| Sodium carbonate | .. | .. | 1 oz. |
| Potassium bromide | .. | .. | 10 grs. |
| Water to | .. | .. | 20 oz. |

It by no means follows that this will give the best results with any given brand of paper, and we should strongly advise you to adopt a formula given in the maker's instructions.

Adapters.

I want to use quarter-plates in half-plate dark slides. Could you suggest a method by which I could adapt the slides for the purpose? F. H. E. (Manchester.)

It is a comparatively simple matter to make adapters from cardboard or other material, but commercially made wooden ones are obtainable through dealers, and we think your best plan would be to have a proper set fitted to your slides.

Interior Exposures.

Can you suggest a reliable means of calculating exposures for indoor subjects? D. W. M. (Haslemere.)

Interior subjects are of such wide variety that we cannot imagine any simple means of calculating exposures for all of them. In spite of all sorts of meters and calculators, a certain amount of experience and discretion is necessary. Probably the best help is to keep for reference copies of all successful photographs, with particulars as to the exposure conditions which gave the results.

Right to Print.

I had some negatives developed at a holiday resort, and I find that the dealer who had the work done for me is exhibiting an enlargement from one of the negatives. Has he the right to do so? R. V. (Tottenham.)

He has no right to do this, and technically he is infringing your copyright. These things should be done only on the strength of a friendly arrangement, or by definite agreement with or without a fee. If the dealer sold prints from your negatives, or allowed them to be reproduced in any way, it would be a much more serious matter.

Cleaning Bromides.

I find that the surface of my bromide prints, especially those in a high key, is not as absolutely clean as I could wish. What is the best way of cleaning them up? F. I. (Lincoln.)

We assume that you refer to surface "dirt," and not to slight fog, or anything of the kind. At the end of the final wash you should lay the print at the bottom of a dish of clean water, and swab the surface with a soft Turkey sponge, or a wad of cotton-wool. An alternative is to go over the surface of the dry print with cotton-wool moistened with:

| | | | |
|-------------------|----|----|---------|
| Borax | .. | .. | 1/2 oz. |
| Water | .. | .. | 20 oz. |
| Methylated spirit | .. | .. | 5 oz. |

Dissolve the borax in warm water, and when cold add the spirit.

"A.P." Competitions.

What are the rules for your monthly competition? Must the work submitted be done entirely by the competitor? L. A. (London.)

We have three regular monthly competitions all the year round. Perhaps it would be better to say that the competition is divided into three sections—beginners', intermediate and advanced. Only in the beginners' section is professional assistance permitted. The full rules for all sections are published in the last issue of each month, while the necessary coupons appear in every issue.

THE London Salon of Photography 1934.

SENDING-IN DAY, Wednesday, August 29th.

THE TWENTY-FIFTH EXHIBITION promoted by the Members of the London Salon of Photography will be held at The Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1, from SATURDAY, 8th September, to 6th October, 1934.

CONDITIONS OF ENTRY (Please read carefully).

- No. 1. Pictures from exhibitors in the British Isles must not be framed; but may be mounted. Each picture must bear on the back, clearly written—(a) name of artist; (b) number and title of picture; corresponding to particulars on the Entry Form.
- No. 2. When mounts are employed, they should conform to the following sizes—25 × 20, 20 × 16, or 15 × 12, but no mount to exceed 25 × 20; and it is suggested that white or light-toned mounts be employed wherever possible.
- No. 3. Pictures from abroad must not be mounted (or framed), but should bear full particulars as above.
- No. 4. Pictures which are sent unmounted will be suitably mounted by the Salon Committee, and all accepted pictures will be shown under glass.
- No. 5. All pictures should be sent by parcels post, packed flat, and properly protected with stiff cardboard and adequate wrappings, addressed to: THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY, 5A, PALL MALL EAST, LONDON, S.W.1.
- No. 6. The sending-in day is Wednesday, August 29th, 1934. All pictures for the Exhibition must arrive at the above address on or before this date. Exhibits may be delivered by hand at the Gallery on this date only.
- No. 7. The Entry Form, properly filled in, must be sent with the pictures, together with entry and packing fee of 5/- (this fee covers any number of pictures from one exhibitor).
- No. 8. To avoid Customs complications, all entries from without the United Kingdom must be sent by post and without prices marked on the prints. Packages containing such entries should be clearly labelled: "PHOTOGRAPHS FOR EXHIBITION ONLY. NO COMMERCIAL VALUE. TO BE RETURNED TO SENDER."
- No. 9. All pictures sent by post will be repacked and returned carriage paid, after the close of the Exhibition.
- No. 10. In view of application being made from time to time to The London Salon of Photography for permission to reproduce pictures from the walls of the Gallery, exhibitors are asked kindly to signify on the Entry Form whether they have objection to such permission being given. The copyright, in all cases, remains the property of the authors of the prints.
- No. 11. The Committee assure intending exhibitors that the utmost possible care will be taken of all work submitted, but they do not accept any responsibility for loss or damage, either during transit or at the Gallery.
- The submission of pictures will be understood to imply acceptance of the above conditions.
- Due notification of acceptance of pictures will be sent out as soon as possible.
- All work submitted to the Selection Committee will be carefully and impartially considered, and no preference will be given to pictures by Members of the Salon.

All correspondence must be addressed to the Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.

FORM OF ENTRY.

TO THE HON. SECRETARY, THE LONDON SALON OF PHOTOGRAPHY.

Sir,—I beg to submit the undermentioned Photographs for the consideration of the Selection Committee, and I enclose Postal Order of the value of 5/- to cover Entrance Fee and the cost of return postage (see conditions 7, 8, and 9).

| Reg. No. (leave blank). | A, B or C (leave blank). | Number on Picture. | Title of Picture. |
|----------------------------|-----------------------------|-----------------------|-------------------|
| | | 1 | |
| | | 2 | |
| | | 3 | |
| | | 4 | |
| | | 5 | |
| | | 6 | |

The attention of exhibitors residing in countries outside Great Britain is specially directed to Condition No. 8.

**Readers of
The Amateur
Photographer &
Cinematographer**
who are preparing work for this year's Salon may use this page as an ENTRY FORM and send with their pictures.

SEE CONDITIONS.

Intending Exhibitors
who are unable to secure extra Entry Forms in time may prepare their own on plain paper provided the conditions of Entry are adhered to.

I AGREE

TO CONDITION 10.

YES OR NO.

Name.....
(State Mr., Mrs., or Miss)

Address.....

The Amateur's Emporium

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less.....1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less.....2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 60, Deansgate, Manchester, 3; 26b, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

LEICA III, collapsible Summar f/2, complete in case; brand new, £28.—10, Oakbank Grove, S.E.24. [3715]

ZEISS Baby Ikonta, Novar f/4.5, Dervall, Zeiss filter, Zeiss Diaphot Exposure Meter; safe for panchromatics, 55/-—BM/NHSX, London, W.C.1. [3177]

THORNTON-PICKARD Special Ruby 1-pl., Dallmeyer anastigmat f/4.5, rise and fall front, revolving back, hinged hood, sling, with 6 double-sided slides; extras include pair focussing magnifiers in case, and F.P.A., together with leather case; one owner, condition perfect; price £10, carriage paid and packed by T.-P. Co.; approval to responsible person or against cash.—Lamb, Lyme Grove, Altrincham, Phone 2507. [3178]

ENSIGN Cameo 3½×2½, Ensar f/4.5, Compur shutter, double extension, 6 dark slides, F.P.A., roll-film adapter; hardly used; £6, or near.—Vaughan, 218, High St., Bangor. [3179]

ENSIGN 7-in. Anastigmat f/5.8, in Koilos shutter, 27/6; 3½-in. Kodak Tank (new), 11/6; Ditto (used), 8/6; V.P.K. Tank (new), 6/-; P.C. Plate Tank, 5/-; two 1-pl. Storage Boxes, 4/6; Lancaster 1-pl. Camera, brass-bound mahogany, triple extension, slides (no lens), 12/6; Solid Brass Optical Lantern, 25/-—Below.

WANTED.—3½-in. Anastigmat, and Small Reflex (lens not essential).—Parkin, 25, Margaret St., Beverley Rd., Hull. [3182]

AMATEUR Giving Up.—1-pl. Reflex, 1-pl. Sanderson, Lenses, 1-pl. Enlarger, balance and weights, dishes, Justphot, sundries, full particulars on receipt of postcard.—6, Manor Way, Egham, Surrey. [3183]

1-PLATE Roll Film Kodak, f/6.3 Ross Homocentric lens, case, tripod, filters, accessories, 55/-—2, Bradwell Avenue, Barton Rd., Stretford, Manchester. [3184]

1-PLATE Sanderson (Regular), all movements, 4 Zeiss 3-foci lens 4½, 7½ and 9 in. foci, in Automat shutter, 6 double block-form slides, stiff canvas case; condition excellent, £5/10.—Shelley, 132, Bethune Rd., London, N.16. [3186]

BARGAIN.—£12/12 or near offer, Mentor V.P. Reflex, Tessar f/2.7; perfect outfit; write particulars.—Box 1171, c/o "The Amateur Photographer." [3188]

3½×2½, f/3.8 Zedellar, delayed-action Compur, 32 double extension, rising and cross front, 6 slides, £5.—114, Langdale Rd., Thornton Heath. [3206]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

CONTAX, slow-speed, Tessar f/2.8, ever-ready case, filter, lens hood; cost £32 recently, and hardly used, £20.—Below.

3½×2½ Voigtlander Reflex, f/4.5 Busch Omnar, 32 D.D., F.P.A., case, Enlarger (takes camera lens), £3/15.—Below.

6½-IN. Watson Convertible Anastigmat f/6.5, 32 fits above camera, £2.—E. L. Dunnnett, 3, Ascott Avenue, Ealing. [3078]

ROLLEICORD, new last week, used one spool only; cost £10/10; accept £7/10 for quick sale, cash or easy payments; must sell.—24, Bolton Rd. West, Ramsbottom. [3196]

V.P. Kodak Special, 3-in. f/4.5 Ross Xpres, latest Compur shutter, 1 to 1/300th, excellent condition, Kodak yellow screen for same, brand new Rhaco view-finder, Watkins Bee meter, leather case, £4 lot.—Box 1174, c/o "The Amateur Photographer." [3201]

GRAFLEX 5×4, Aldis f/4.5, 2 double slides, £5; Verascope 45×107 mm., R.R. lenses, changing-box, case, 35/-; Cocarette 3½×2½, f/6.3, case, 35/-; 6-in. Blitz f/4.6, sunk, iris, flange, 27/6; 6-in. Ross Homocentric f/5.6, sunk, 35/-; 12-in. C. & G. f/6, 21/-—Whittaker, Sunnyside, Dane Bank, Disley. [3204]

Rhaco

DEVELOPING TANK FOR PLATES, FILM PACKS or CUT FILMS

This new "Rhaco" Developing Tank is of superior construction throughout. After the tank has been loaded in a dark-room, the process of developing, fixing and washing can be carried out in daylight without handling the contents. The tank is supplied complete with a rubber tube for connecting it with the usual cold water tap, thus ensuring thorough washing of the negatives.

WRITE FOR LISTS

One to cover each of your photographic and ciné requirements. Send now, enclosing 2d. postage, to Dept "A."

DON'T MISS THOSE LOVELY "AGAINST-THE-LIGHT" PICTURES

The Zodel Collapsible Lens Hood (patent applied for) allows you to take pictures almost directly into the sun—combining portability with light weight and the greatest possible measure of protection.

The Zodel hood has three sliding sections, so designed that they cannot chafe and wear away the dead black lining which ensures absence of reflection. An adjustable rectangular mask at the front ensures that the cone of light entering the camera is of such shape that internal bellows reflections are almost non-existent, resulting in greatly increased brilliancy of negatives, while the adjustable sunshade-flap can actually be set to cast a shadow over the inside of the hood for really exacting work.

Use a Zodel hood always. It measures less than an inch in thickness (closed) and will go easily into your camera case.

Push-in filter holders to carry standard 1½ or 1¼ in. circular glass filters are available. Make a resolution to make every exposure with a Zodel hood in place. You will be amazed at the improvement in your results.

Size A, to suit lenses 1 to 1½ in. diameter. **7s. 6d.**
Size B, to suit lenses 1¼ to 1½ in. diameter. **7s. 6d.**
Filter Ring, Size A, for 1½-in. glass filter. **2s. 6d.**
Filter Ring, Size B, for 1¼-in. glass filter. **2s. 6d.**

Make sure you specify "ZODEL" the best lens hood ever designed.

The Agfa SPEEDEX '0'

For standard V.P. roll films. Fitted with Solinar anastigmat lens in Compur shutter. Speeded 1 to 1/200th sec. T. and B., self-erecting front.

SUPER IKONTA

THE CAMERA WHICH DOES THE FOCUSING

In pre-Super Ikonta days the user of a roll-film camera had to depend more or less upon his focussing scale for the sharp focussing of his subjects. This involved either judging or measuring the distances. But so many factors come into play when estimating distances that it is true to say that no one can judge distances with certainty—it usually resolves itself into guesswork. Zeiss Ikon in their Super Ikonta have completely removed the focussing difficulty. A glance through the distance meter, a turn of the milled knob, and the lens is automatically focussed correctly on the subject you wish to photograph. The Super Ikonta distance meter is a complete departure from previous types, and is so strongly constructed that it fulfils the requirements of the amateur who uses his camera for sports, games, as well as general snapshot work. For touring, motoring and hiking the Super Ikonta is an ideal companion.

The Super Ikonta is now supplied in three sizes:

No. 530, for 16 pictures $2\frac{1}{2} \times 1\frac{1}{2}$ in. on $3\frac{1}{2} \times 2\frac{1}{2}$ in. spool, Zeiss Tessar f/3.5 and Compur shutter (not delayed action) **£16:12:6**

No. 530/2, for 8 pictures $3\frac{1}{2} \times 2\frac{1}{2}$ in. (or, by using mask provided, 16 $2\frac{1}{2} \times 1\frac{1}{2}$ in.), Zeiss Tessar f/4.5 and delayed-action release "take yourself" Compur shutter **£17:0:0**

No. 530/15, for 8 pictures $4\frac{1}{2} \times 2\frac{1}{2}$ in. (or 16 $2\frac{1}{2} \times 2\frac{1}{2}$ in.), Zeiss Tessar f/4.5 and delayed-action Compur shutter **£18:15:0**

THE PERFECT REFLEX For Animal Photography

Read what Users say :

"The Camera which I purchased from you just a year ago has won me six good prizes, chiefly with animal studies. The detail of fur, etc., is wonderful."—Miss T., Southsea.

"For some months past I have been using one of your Ruby Horizontal Reflex Cameras for photographing dogs, and find it an ideal outfit for this purpose, its small size making it exceedingly handy, especially for action pictures."

—Mr. W. L. T.,
Cardiganshire.

Highest allowances on your used "still" or cine apparatus in part payment for your better purchase. Let us quote you—you'll be agreeably surprised.

A
 user found the
 6th advantage of the
SELOchrome
Film Pack

Ilford Limited set out to produce the perfect film pack, and when placing on the market the SELOCHROME Film Pack claimed that it excelled in these five ways:—

- (1) Films are kept absolutely flat and remain so when removed.
- (2) The pack is absolutely light-tight. There is no fear of fogging, even at the edges.
- (3) The tabs of the pack are of varying length; it is almost impossible to pull the wrong tab.
- (4) Each film is brought into position with an ease and accuracy never before attained.
- (5) One or more films may be removed without opening the pack or removing it from the adapter.

Selochrome Film Packs are obtainable from all Photographic Dealers in the following sizes: $2\frac{3}{8}" \times 1\frac{3}{4}"$, $3\frac{1}{4}" \times 2\frac{1}{4}"$, $4\frac{1}{4}" \times 3\frac{1}{4}"$, and $9 \times 12\text{cm}$.

BUT

a delighted user wrote pointing out a sixth advantage of the SELOCHROME Film Pack—and that is, that it fits into correct register with all film pack adapters, including those with rounded corners.

VOL. LXXVIII. No. 2388.

SINCE the issue of our special Jubilee Number we have received a continuous stream of letters of congratulation; and it is curious to note how, as time goes on, these come from more and more distant parts of the world. For *The Amateur Photographer* finds its way to the farthest and most obscure corners. Some idea of its ubiquity is given by our annual exhibition, at the R.P.S., of prints sent for the Overseas Competition. Those who scan the prize lists of our monthly competitions will also be aware of the frequency with which awards go to readers in distant lands. In this very issue the "Pictorial Analysis" article, not for the first time, deals with a picture by one of the many gifted workers in India. It is no idle boast that the circulation of "The A.P." is world-wide.

The Far Horizon.

Cameras were in profusion in and about Windsor Castle on August Bank Holiday, but with a holiday crowd surging through the state apartments and St. George's chapel interior photography was out of the question. A good many people took their cameras to the top of the Round Tower, and inspired by the policeman on duty there, who pointed out objects on the distant horizon, including Box Hill in Surrey, and the Lots Road power station, and even, though visible more to the eye of faith than of sight, the Crystal Palace, made wild exposures from the parapet. The hymn-writer might express a disinclination to see the distant scene, one step enough for him, but it is the distant scene that the happy-go-lucky person with a camera seems to want, and he blazes away

TOPICS of the Week

SUMMER IN THE CITY.

A snapshot at the entrance to Wood Street, Cheapside.

in that direction, though mercifully he does know enough about it to be prepared for disappointment afterwards. But what a lovely bit of England it is which nestles around Windsor Castle. We noticed in the Broad Walk that some of the famous elm trees, which were planted in the seventeenth century, have been cut down, and others are said to be afflicted with the disease which has made the felling necessary.

Photographic Specialisms in Science.

The little fleas, we know, have lesser fleas, and so in science, a thing of many specialities, but within each speciality other specialities which minister to it. One set of photographic materials suits the astronomer, another the student of biological sciences, a third the worker in chemistry and physics, and a fourth the geologist and the mineralogist. No, even that will not do, for in astronomical work, for example, your choice of material will depend upon whether you want to do direct photography—solar, stellar, or lunar—or spectroscopy, or photometry and mass spectra analysis, or just to copy illustrations for lantern slides or prints. In photomicrography it depends whether you want to get non-coloured objects with fine detail, or pond life and objects containing much green, or stained sections, or to do entomological work where such things as chitinous skeletons are involved, in which case an infra-red plate may be useful. The infra-red plate may also be useful in getting fossils in brown coal, carbonaceous shale, and peat, where the transparency to infra-red allows a rendering of detail in these materials hitherto impossible. But in fact for the hundred

purposes of science there appears to be a special photographic material to suit every one of them.

Photography and the Medical Profession.

A correspondent who has been attending the annual meeting of the British Medical Association at Bournemouth, writes: Doctors appear to be more keenly interested in amateur photography than the members of any other profession. They beat the clergy, who probably run second. That was the conviction, as he related to me, of at any rate one stand-holder at the exhibition in the Winter Gardens. He was out to sell X-ray film for his big manufacturing house, but it was his constant experience that doctors came to his stand, first to inquire about X-ray film, and then to go on talking about

ordinary photography. One doctor himself talked for a solid half-hour about infra-red. This particular exhibitor had a panel of lantern slides illustrating X-ray views of various diseases and abnormalities, but before the week was out he changed over to a set of ordinary slides—landscapes, figures, reproductions of paintings, and so on—because he found these to be more interesting to his medical visitors than the purely professional work. Why is photography—as is shown again and again in "Who's Who"—the chosen recreation of Harley Street? Why is there almost invariably a dark-room in "Bedside Manor"? Certain it is that when X-rays were discovered rather less than forty years ago the reason why doctors took up the discovery with enthusiasm was not only because of what it revealed of

the inner anatomy, but because it was in a line with the work they had been pursuing with the ordinary camera. The medical expert with the X-rays was very often the local practitioner who had been an active member in the local photographic society. Probably the reason why members of the medical profession favour photography is because, in the course of their daily work, they see so much that is abnormal, distressing, painful, disgusting, that they turn with relief to the most normal thing going.

Competitions.

At this season the entries to our competitions expand enormously (with the heat?). We would again urge all who enter them to read very carefully the few simple rules, or they may handicap themselves seriously.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Static Fog.

I enclose a negative, one of five or six of recent development, as I am puzzled by the curious character of the fogging at one edge.

The marks do not suggest any single defect in camera or bellows, and I cannot detect a defect of any kind. Can you suggest an explanation?
W. J. B. (London.)

We should have been glad to see all the negatives in which the defect has occurred, as this would have helped us in our diagnosis. At the same time, from the specimen you sent we are confident in attributing the trouble to a discharge of static electricity.

The examples reproduced are from a collection, fortunately a very small one, illustrating the effect; and you will notice a close resemblance between the first one and your own.

These electric sparks occur with pack films, when the tab is torn off from the celluloid before development. Such a thing is unlikely to occur except in hot and dry conditions, which certainly obtained for a considerable period recently. The tab must not be torn off quickly and violently. We have succeeded in producing this spark-fogging deliberately, with films that have been taken from a pack without exposure. The spark is often distinctly visible, and development discloses its effects.

A very striking example is that shown in the second illustration; the comet-like specimen on the right is unusually long, and was visible for more than half the length of a $3\frac{1}{2} \times 2\frac{1}{2}$ film. In all cases the illustrations show the protected edge of the film, which would not be fogged by light entering the adapter.

An effective preventive is to damp the tab where it is attached to the film, when it will come off smoothly and quickly.

A Word about FILTERS

The question of the properties and uses of light filters is a difficult and complicated one. Some of the salient facts which interest the average photographer are here considered.

THE photomicrographer and the colour worker must necessarily use light filters; but the general worker is liable to ignore them altogether, or to be uncertain as to their use and effect. In a great many cases—probably the majority in some classes of work—the photographer cannot possibly secure the best results without the aid of filters properly used.

Forms of Filters.

Only three forms of filter are likely to concern the average photographer: coloured gelatine used alone; coloured gelatine cemented between two pieces of glass; and coloured optical glass. Gelatine alone is difficult to fix and to keep flat, and is easily damaged by handling and otherwise. It is an improvement to sandwich it between two pieces of glass, but the three components should be cemented together with Canada balsam. A properly worked glass filter is the best, although it is expensive, especially in larger sizes.

The simplest form of filter—a circular piece of gelatine—is often placed between the components of the lens. This position protects the filter, but necessitates frequent removal and replacement of the front lens. The most usual form is that of a sort of lens cap to fit on the lens, or to screw into the mount.

Although most filters are homogeneous in colour, some are graduated from a deep colour to clear glass or gelatine. These are often called sky filters, and they are commonly fitted in a mount which permits of their being raised or lowered. Their effect is modified by the position of the gradations, by the distance from the lens, and by the stop used.

Positions.

There are five possible positions for a filter: (a) in between the source of light and the object; (b) on the front of the lens; (c)

between the lens components; (d) on the back of the lens; and (e) close in front of the plate.

The position (a) is often convenient in photomicrography, while the position (e) may concern the three-colour worker. The other three are available for general work, and all are in actual use.

Various aberrations are liable to result from the use of a filter, and these depend to some extent on its position. If a somewhat thick glass filter is used at the back of the lens it will affect the focus sufficiently to make the usual focussing scale unreliable. When the filter is on the front of the lens the effect is often, though not always, negligible. Any trouble of this kind is eliminated when focussing is carried out with the aid of the ground-glass screen, and with the filter in position.

Selective Filters.

It must be remembered that an "ordinary" plate is but feebly sensitive to colours beyond blue-green; an orthochromatic plate is more or less sensitive to just beyond yellow; while a panchromatic plate may run well on into red. The object of any filter is to cut out such colour rays as are not required for the purpose in hand.

An almost colourless filter is made to absorb only ultra-violet rays; at the other extreme is a filter which appears quite opaque to the eye, as it passes only the infra-red rays. Between these is a wide range of filters, mainly of different depths of yellow, which absorb more or less of the violet and blue rays. Then there are special filters, such as a "contrast" form, which cuts out the whole of the violet and blue.

For the average photographer it is the range of yellow filters which serve him best, for landscape and flower work, and indeed for all subjects in which the various colours are to be translated into appropriate monochrome tones. His common trouble is that violets and blues act too vigorously on his negatives,

while greens, yellows and reds lag far behind. These would do better if they had more time to act, provided he is using a suitable emulsion; but this extra time would allow the over-active rays to play havoc with his gradations. Hence the necessity for a filter which will put an effective check on the active rays while the others have time to do the necessary work.

The Filter Factor.

As a filter used for this purpose is excluding a certain proportion of the most active rays, it follows, as a rule, that an increased exposure is necessary. The extent of this increase corresponds to the "factor" of the particular filter.

Here arises a common error—the idea that a filter has one definite factor, so that it can be classified as $1\frac{1}{2}$ times, 2 times, 5 times, or what not. This is not the case. The factor of any given filter may vary enormously according to the peculiar sensitivity of the emulsion with which it is used, and the character of the illumination to which the exposure is made. Not only does the factor of the filter vary in this way, but so also does the "correction" which results from it.

Further Hints.

It follows that it is a good plan, whenever possible, to use with a given emulsion the filters made or recommended by its manufacturers. The alternative is to arrive at a sufficiently accurate factor by experiment, and also to study from results the extent to which the resulting "corrections" may be regarded as satisfactory.

Filters should be protected as much as possible from light, excessive heat, and (with gelatine especially) damp.

Those who are really interested in the use of filters in different branches of work would be well advised to study some of the excellent brochures dealing with the subject.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

CAMERA PRICES.

SIR,—I read the letters of "Nomad" and W. S. Henley regarding camera prices with a certain amount of surprise. Their opinions seem to be so contrary to those of the majority of people, and as a camera buyer with experience going back well before the war, I have no hesitation at all in saying that to-day's values are better than ever before.

The modern high-grade camera is by no means merely a pressed metal box, as "Nomad" suggests, but an assembly of beautifully made precision parts—sometimes, it is true, contained in a pressed metal box. Research and progress have given us an infinitely better article than we could have obtained at any price twenty years ago, and research costs money.

If Mr. Henley feels the twin-lens reflex at £22 10s. is the type he requires, but that the price is prohibitive, he will find an excellent substitute at £10 10s., made by the same manufacturer, and others at even lower prices by different makers; and in the meantime I am sure his modest £3 10s. camera is doing excellent work.—Yours, etc., F. H. R. STILLMAN.

FOGGING ROLL FILMS.

SIR,—May I add a few words to your correspondence on the subject of fogging panchromatic roll films through the red sight windows?

Mr. Roger C. Carter's experience recorded in your issue of August 1st is unfortunate, but the fact that some fogging occurred whenever the window cover was lifted shows the necessity of keeping the window covered the whole time, and working out some method of winding by counting turns. The checking of turns by using a film backing is evidently not accurate enough, probably because of the progressively increasing diameter of the take-up spool as the film is wound on to it, this giving the need for winding a little less between each film exposure. To wind the same number of turns between each exposure as was required for the first would cause too much film to be taken up, so that the last exposure would be mutilated or missing.

I would suggest that a test be made with a complete film, a note being made of the number of turns required between each exposure, which would, of course, be progressively fewer. For fractions of turns, a few dots or marks could be made, say halves and quarters of a turn, round the base-plate of the winding-key. A list of the turns required could be carried on the camera case and a tally kept by pencil ticks as the exposures were made. By this means a sufficiently accurate system of "blind" winding could be worked out, while danger of fogging would be obviated.—Yours, etc., R. C. WOOD.

SIR,—It may be of interest and assistance to your correspondent, Mr. Carter, in whose letter published on August 1st I seem to detect a strain of envy of my immunity from super-pan. fogging, to know that the camera through which all the exposures referred to were made was a Nagel Triumph, over 100 negatives being exposed in this.

Whether the light in which I was working was of the same intensity as that of Italy or Switzerland I cannot say, but exposures, according to a Justophot, were of the order of 1/100th second at f/11 for average subjects, although actually about a quarter second at f/3.2, with a medium filter was given. A tripod was, of course, used, and this necessitated the red window being exposed to the sky and often to the sun for fairly lengthy periods, but in no instance did I fog a film, save on one occasion, and that was due to another cause, namely, insufficient desensitising.

From the complaints that have been made it appears that fogging is due to rays from the lower end of the spectrum penetrating the backing paper, for we have not heard yet of complaints from users of equally fast non-panchromatic emulsions—and yet even those camera windows which appear to be safe with super pan. are red, an apparently mysterious red that is safe for super pan. emulsions. Is it possible that the trouble is due to infra-red radiation to which some red celluloids are transparent and others opaque?—Yours, etc., R. E. S. WHITE.

THE PERFECT CAMERA.

SIR,—I fear that my ideas of the perfect miniature camera are as amateurish as my knowledge of photography, but the letter of your correspondent H. Braithwaite is written in such an excellent cause that it deserves to be seconded. I have searched in vain for a first-class precision miniature camera of British manufacture, and I have refrained from buying a foreign one because the import duty makes the price prohibitive. In the case of these small precision cameras the heavy landing tax is less a protection to British manufacturers than a penalty on the consumer, because there is nothing made in this country to compete against them.

I have suggested to more than one British manufacturer that there is a market, here and in the Dominions, for a miniature camera that does the focussing; but in effect I have been told to mind my own business. The fact that foreign-made photographic apparatus can glut the British market in spite of the heavy duty is an indication that the home manufacturers are either unwilling or unable to give the public what it wants.—Yours, etc., OLIVER RUSTIC.

THE "PERPLEX" DEVELOPING TANK

AN adjustable developing tank for all sizes of roll film up to $4\frac{1}{2} \times 2\frac{1}{2}$ has been introduced to the British market by the Norse Trading Co. (London), Ltd., of Berners House, 47, Berners Street, W.1. This tank resembles in its exterior the well-known Correx tank, but differs in its internal arrangements in that the spool which accommodates the film for developing is adjustable, the upper plate being separable from the lower by a screw thread on the central spindle. The inner sides of both the top and bottom circular plate have a spiral groove extending from the upper edge of the plate to the centre. When the correct separation of the two plates has been fixed for any particular film, they are locked in position, and in the dark-room the film, stripped of its backing paper, is fed into the spiral groove between the two plates.

This is much simpler to perform than to describe, and a complete $3\frac{1}{4} \times 2\frac{1}{4}$ 8-exposure film can be fed into the spool

very rapidly after a little practice. The loaded spool, which, it will be noted, has no celluloid apron, is put in the container of the tank, the lid is then replaced, and the developer poured through a hole at the top.

To facilitate the action of the developer throughout the film a special vulcanite split stick is inserted in the central hole and engages with the spool in the interior. By turning this the entire spool can be spun round in the developer, or a thermometer can be inserted to test the temperature of the solution.

The entire article is made of bakelite, which is proof against acids, is almost unbreakable, and is easy to clean. It costs 25s.

After development, both fixing and washing can be conducted without removing the lid or the spool from the tank. It is a very useful accessory, and further particulars can be obtained from the above address.

The NEW AGFA Daylight Developing Tank

£1:10:0

No dark-room needed. Takes the standard 3 1/2 x 2 1/2 roll films. Very easy to manipulate. Perfect results.

EVENING LIGHT

By ROBERT M. FANSTONE.

In the following article the attractiveness of the late evening effects of summer and early autumn are dealt with. Some technical hints are also given.

PHOTOGRAPHERS, more than any other class of people, have reason to be thankful for the extra hour of daylight throughout the summer and early autumn. In almost every branch of photographic work the late evening sunshine can be used to advance

are long and interesting, and at this time the sunshine finds its way into the most unexpected places. The best effects are often to be found a few minutes before sunset.

The modern photographic materials in the form of panchromatic emulsions, as well as the popular 'chrome films, provide an ideal medium for securing these effects. These materials are capable of dealing very successfully with those subjects which present a long range of contrasts, by reason of the great latitude afforded. Further, there is an almost entire freedom from halation, which is all to the advantage of the photographer who undertakes this work. Finally, the great sensitiveness of these materials to yellow or red rays allows of short exposures being made successfully, where the subject requires them.

The photographer who takes his camera out with a view to recording these effects of light will find that in many cases the most pleasing subjects are seen against the light. These are not difficult to secure provided that the lens is screened from direct light by a hood of effective size. Further, it is sometimes possible so to arrange the

Evening light.

subject in the case of a landscape or woodland, that the sun is directly behind some prominent object in the foreground, such as a large tree.

Although when the camera is fitted with a lens of large aperture it is possible to secure many of these subjects with a hand camera, it will be found that in many cases a time exposure of several seconds will be called for. The lighting at this time of the day is very deceptive with regard to actinic power, and the only safe course is to use an exposure meter and a tripod.

Evening, Romsey Abbey.

tage. Commonplace and uninteresting subjects are transformed into valuable picture-making material. The effects produced are very varied. We have sunshine and shadow, with the immense advantage in very many cases that there is more shadow than sunshine, and perhaps under no conditions are pictorial possibilities greater. Evening sunshine, and more particularly that of late evening, can be effective for landscapes, architecture, both interior and exterior, portraiture, and even flower photography.

The late evening sunshine has a character of its own. At other hours the lighting is often too brilliant, and it is a difficult matter to secure good results because the contrasts are too harsh, and the effect spotty. The evening shadows

Towards sunset in the woods.

August 15th, 1934

Young architects.

GREAT fun, this; the children are completely happy in their own enjoyment of a sunny day on the shore, and the photographer in his absorbing hunt.

There are innumerable pictures at the edge of the water, more than can ever be counted; but to get even a small proportion of them on to film requires some skill, and not a little luck. The skill lies rather in the ability to seize and arrange instantly in the view-finder any possible composition. Camera manipulation can become almost automatic on such a hunt.

It is undoubtedly photography for the smaller camera, and the brilliance of the light enables one to set the stop at $f/8$ or $f/11$, the shutter speed at $1/100$ th of a second, and be assured of fully exposed negatives. A focussing at 15 feet will give sufficient depth of field when used in conjunction with one of these stops, and all that remains to be done is to fit a lens hood.

This useful attachment to the rim of the lens will keep out any reflected light, and so prevent those annoying light streaks which can so easily spoil an otherwise perfect negative. This also simplifies matters, as the photographer can then snap directly towards the sun if he wishes. Even the additional exposure required for a *contre-jour* study when inland, can be ignored on the tide line. Reflected light, and the latitude of

Prowling

By
D. SWAINE.

modern films, make it unnecessary.

Although I have said that this photography of seaside incidents is essentially work for the small camera, I am not forgetting the box camera. In many ways there is nothing to beat it. Only its lack of a faster shutter speed prevents its being ideal; but many "slow shots" can be successfully

Castles in the sand.

Under the pier.

Examining their catch.

the TIDE LINE *with a CAMERA*

accomplished. One thing is greatly in its favour—so many are about the beach that no child fights shy of such an instrument, or displays any curiosity regarding it.

To catch these unrehearsed poses I find that one often requires to be wading; and while light clothing or even a bathing costume is needed for comfort, it is a great advantage if a dark jacket can be worn, as this renders the camera less conspicuous when held against one's body. A black alpaca is perfect for this purpose.

The chief trouble when stalking these unconscious

Full speed.

The picture on the pail.

models is found when trying to separate them from the constantly moving background of people. And it is no uncommon happening for a child suddenly to dart across the picture field just as the exposure is made. In this connection the photographer also has to guard against adopting too high a view-point when facing the sea and snapping children on the sand. There is always a danger of becoming so absorbed in watching one's subjects that breaking waves are not noticed, and these are sadly out of place when balanced on a child's head.

The charms of the seaside make the strongest appeal to the majority of holiday-makers at this season, and for those who find happiness in watching the kiddies romp, splash, and build castles on the sand, I suggest that many treasured memories can be stored

for future years, by means of a camera, a keen eye, and a little patience.

I would remind those who make lantern slides that there are few, if any, more popular subjects than such as I am suggesting. The spontaneous applause which they evoke is sufficient evidence of this. A warm tone is generally the most appropriate.

A friendly tussle.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS *for the* LESS ADVANCED WORKER

SELF-TONING PAPER.—II.

AS to the outfit for handling self-toning papers, it is about as simple as can be. The photographer who has printing-frames and dishes available is already fully equipped.

First of all, however, I would advise the provision of a quart bottle to hold hypo solution ; as this must be plain, and not of the acid type advisable for most other purposes. I would also advise making up the hypo in a special way, so that it will be convenient for any brand of paper that may be used.

Into the clean, empty bottle, pour exactly 32 oz. of water, and mark on the bottle the level to which it reaches. This can be done by sticking on a strip of paper ; by painting a line with enamel ; or by making a scratch with a triangular file. Empty the bottle. Dissolve 1 lb. of hypo in about a pint of hot water ; pour into the bottle, and add enough water to bring the solution up to the level marked. It is evident that, when the solution is shaken up, two ounces of it will contain one ounce of hypo.

Here are the hypo baths for some typical papers :

| | | | | | |
|------------|---|-----|------|-------|-----------------|
| Kodatone | } | | Hypo | 2 oz. | Water to 20 oz. |
| Seltona | } | | | | |
| Estona .. | | " " | " | 3 " | " " " " |
| Yto .. | | " " | " | 4 " | " " " " |
| Enitone .. | | " " | " | 6 " | " " " " |

Now suppose that to tone and fix a batch of prints we

want 10 oz. of bath. With the stock solution and added water we can make up any of those given as follows:—

| | | | | | |
|----------|---|----|----|-------------|-------------|
| Kodatone | } | .. | .. | Stock 2 oz. | Water 8 oz. |
| Seltona | | .. | .. | | |
| Estona | | .. | .. | 3 " | 7 " |
| Yto | | .. | .. | 4 " | 6 " |
| Enitone | | .. | .. | 6 " | 4 " |

And similarly with any other strength or quantity required.

Printing is done in daylight, but not in direct sunlight, except in the case of a very dense and contrasty negative. The densest patch on a negative will resist diffused light during the whole time of printing, but sunlight would penetrate it so that the high-lights would be degraded, and the print have a dull and lifeless appearance.

As printing in diffused light is a gradual and slow process it is advisable to have several frames going at once. Half a dozen is a convenient number. Another reason for this is that it is not well to leave a print in the frame from one day to the next, and care must be taken to avoid damp, or both print and negative will suffer. The best type of frame is one with the hinged back unequally divided, the larger section being raised to examine the progress of printing. The thumb should be kept pressed on the smaller division of the back while this examination is made, as the slightest shift of the paper in relation to the negative is fatal. For film negatives a piece of flawless glass must be fitted to the frame. Masks may be used when the prints are not to be trimmed.

The chief difficulty about the printing is to learn how far it must be carried. All self-toning papers must be printed darker than they are to appear when finished, as they all lose strength in the fixing bath. The correct extent of this over-printing varies considerably with different brands, and must be found by experiment. The colour of the image varies, too. Seltona is brown, Solio reddish, Enitone violet, Yto a sort of plum colour.

Even when comparatively fresh the surface of the paper may have yellowed, sometimes unevenly. Vigorous Seltona is definitely yellow when made. All this rights itself in finishing.

Another point that has to be learnt by experience is the probable strengthening of

SEE ALL THE MINIATURES at SANDS HUNTER'S

SUPER IKONTA

A new de luxe quality camera with range-finder, also direct vision view-finder.

For 16 exposures on $2\frac{1}{2} \times 3\frac{1}{2}$ in. roll film. Zeiss f/3.5 Tessar lens, in D.A. Compur shutter.

£16 : 12 : 6

'BALDAX'

Takes 16 pictures on standard $2\frac{1}{2} \times 3\frac{1}{2}$ in. roll film, self-opening, hinged back, rapid loading, direct-vision view-finder. Hugo Meyer f/2.9 Trioplan anastigmat lens, in D.A. Compur shutter. Price

£9 : 5 : 0

With f/3.5 Meyer Trioplan anastigmat lens, in Compur shutter... £7 7 0

BABY IKONTA

16 exposures on a V.P. size spool. The camera measures only $3\frac{1}{4} \times 2\frac{1}{4} \times 1\frac{1}{2}$ in.—not much larger than a cigarette-case. With f/4.5 lens in 3-speed shutter £4 0 0 With f/3.5 lens in Compur shutter £7 10 0 With f/4.5 Zeiss Tessar lens, in Compur shutter £8 17 6 F/3.5 Ditto £9 7 6

The 'PILOT' Roll-film Reflex

The smallest reflex camera on the market: measures only $5 \times 2\frac{1}{2} \times 1\frac{1}{2}$ in. The Pilot springs to "infinity" position on pressure of a button. Magnifier over ground-glass screen for ultra-sharp focusing. Simple lever movement to change the film; automatic exposure indicator. Size of picture 3×4 cm. 16 exposures on V.P. size film. With f/3.5 Zeiss Tessar lens.... £18 15 0 With f/2.8 Zeiss Tessar lens.... £21 0 0 Leather case £1 0 0

LEITZ LEICA

The miniature camera of world-wide repute. Takes 12 to 36 exposures with one loading. With standard Leitz Elmar f/3.5 lens, with range-finder £25 0 0 With new ultra-rapid "Summar" f/2 lens £33 13 0

'FOTH - DERBY' SPORTS CAMERA.

The Foth-Derby is the smallest roll-film camera with focal-plane shutter on the market. It takes a V.P. size film and gives 16 exposures 3×4 cm.; shutter speeds: 1/25th to 1/500th sec. FOTH F/3.5 anastigmat lens. Price only..... £4 12 6

THE 'WALLET' POCKET TRIPOD

This new de luxe quality compact pocket tripod folds flat when not in use, and weighs only 14 oz. It is of light metal construction throughout. Length when closed, 8½ in.; 46 in. high when fully extended. In flat leather case, 9 in. by 2½ in. by ¾ in.

Price 30/-

'DIST' DISTANCE METER

The "Dist" Distance Meter shows how far the subject is from the camera. The range of the instrument is from 1 ft. 3 in. to 50 ft. Price, in hand-sewn leather case, with instructions

£2 : 10 : 0

THE 'GRACO SCOP'

A VEST-POCKET SIZE EXPOSURE METER.

A new exposure meter of the direct-reading extinction type. The correct exposure is seen on looking through the "Graco Scop," which contains an exposure scale from 25 seconds to 1/1,000th second. Price 21/- Leather case 3/- extra.

OPTOCHROM Yellow Glass Filters

These filters are supplied in four different densities: No. 0, extra light; No. 1, light; No. 2, medium; No. 3, deep. For instantaneous exposure the extra light or light filter should be used; for time exposures the medium or deep filter.

Prices of Optochrom Filters in Optochrom adjustable holders:

THE 'RHACO' Camera Holder

A neat, portable accessory, fitted with camera screw, with ball-and-socket head. Can be attached to a fence, gate, tree, table or any other solid support, from which the desired view can be photographed. 7s. 6d.

Soft leather case, extra.....2/6

'RHACO' DIRECT VISION VIEW-FINDER.

When using the Rhaco Finder the camera can be held at eye-level. Clipped on to any folding camera in a moment. Instantly removed.

Soft or Stiff Leather Case, 2s. 0d. extra. State make of camera when ordering.

'RHACO' View-finder MAGNIFIER

This new focusing magnifier enables the user of any folding camera, fitted with the usual small reflecting finder, to see the image, considerably magnified, more clearly than with a reflex camera. The "Rhaco" View-finder Magnifier can be instantly clipped on to the finder.

Price
6/6

'RHACO' LENS HOOD

The necessity of using an efficient lens hood with modern large-aperture lenses is becoming increasingly recognised. The "Rhaco" Lens Hood can be quickly attached to almost any lens mounted in a between-lens shutter.

PRICES:

Model I, to fit lens hood ¾ to 1 in. diameter, including leather case11s. 6d.
Model II, to fit lens hood 1 to 1½ in. diameter, including leather case13s. 6d.

The 'CORREX' Roll Film Developing Tank

The simplest, least troublesome of all developing tanks. The film is wound on a reel, together with a separating apron, in a dark-room. Developing, fixing, and washing can be carried out in daylight. No. 731 "Correx" Tank for V.P. size films. Price.....25/-
No. 733 "Correx" Tank for 6 x 9 cm. ($2\frac{1}{2} \times 3\frac{1}{2}$ in.) and 6 x 6 cm. films. Price25/-

"Correx" Thermometer, 2/6. "Correx" Developing Powders, per ¼ doz., 1/6. Spare Apron, 8/- Spare Reel, 7/-.

THE 'PHOTOSKOP' Automatic Exposure Meter

Fully automatic. Does not depend on human eyesight, but utilises the properties of the photo-electric cell. Indicates exposures without calculation or tables. The "Photoskop" works entirely without battery, and there is no part to be replaced. It will give a lifetime of useful service. Price, including leather case.. £5 5 0

THE 'TRIPOCANE' WALKING-STICK TRIPOD.

A complete telescopic tripod contained in a walking-stick. It is light, yet remarkably rigid. In appearance the "Tripothane" cannot be distinguished from an ordinary cane. Price 30/- With swivel handle.....35/-

the image, and some change of colour in the print when dry as compared with its appearance when wet.

As the prints are removed from the frames they should be put into a lidded box, and if possible finished the same day. At any rate they should not be left for a long period.

As I said last week, it is most important to follow the working instructions supplied with any given paper. Some papers have a preliminary wash; others go straight into the hypo. With most, the tone varies according to the strength of the hypo bath, and the time the prints are kept in it. Also with most papers it is possible to obtain colder (bluer) tones by means of a preliminary salt bath. In this case it is necessary to use common salt, and not one of the table preparations. All these points, and all others that require attention, will be set forth in the instructions, and

must be rigorously observed, including the procedure for washing and drying.

In the illustration the two prints of Anstey's Cove are on the same paper, but the negative was intensified before the second one was made. The right-hand print is also from a negative which had to be intensified, as it was much too thin for this type of paper.

The gloomy version of Anstey's Cove might have been what was wanted; in which case, well and good. If only a little more brilliance is required, Vigorous Seltone may just do it. When still more contrast is needed the only course is to intensify the negative, which should then be a good one for other purposes as well. A method of doing this I will explain again next week, and also mention one or two further points in connection with self-toning papers.

Precautions with Strong Sunlight

By T. EDMONDSON.

REMINDERS FOR HOT WEATHER

IN hot weather a danger which needs to be emphasised is the harm which may result if a camera is left exposed to the sun. Nothing is easier than to lay it down, either open or closed, in the garden or on the beach, and forget about it. The great heat of the summer sun is such that the camera needs to be kept out of it whenever it is not in use. The leather covering may easily separate from the body under the influence of heat. The bellows may crack, letting light through. Even the metal may warp, and so alter its shape; and, in addition, the possibility of light getting in is needlessly increased. So a little forethought may save much trouble. Cameras intended for use in tropical countries are specially constructed to withstand great changes in temperature. The bodies of these are usually made of teak, and not covered with leather or other material.

It must not be thought that because films may be changed in daylight it is therefore safe to do this in sunlight. They should always be changed in the shade, to lessen the possibility of fogging. After exposure it is well to wrap them in their original light-proof papers, and keep them in their cartons until developed. It must also be remembered that they should be kept cool, heat affecting their qualities considerably.

Another point to remember is that the temperature of the developing solution is liable to exceed the safe limit of 75 degrees Fahrenheit if the room in which it is used receives the uninterrupted rays of the sun. Outhouses and attics

are perhaps worst in this respect, being more exposed to it. Also they usually retain such heat for a long time.

Attention to these details will give more lasting service from the camera, and greater pleasure and satisfaction from summer-time photography.

Asking for trouble.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Thursday, August 16th.

Hackney P.S. Woolwich.
Hammersmith H.H.P.S. "Some Methods of Reproduction." F. B. Bowling.
Isle of Wight C.C. Competition.
Medway A.P.A. "Profits from an Exhibition." H. F. Wingent.
N. Middlesex P.S. Lecture.

Saturday, August 18th.

Bath P.S. Prior Park.
Beckenham P.S. Farnham to Eynsford.
Bristol P.S. Cadbury Camp.
Hanley P.S. Ladderidge and Rudyard.
Hucknall and D.P.S. Clifton and Barton.
Luton and D.C.C. Ashridge.
Nottingham and Notts P.S. Midland Salon Opens, Nottingham Castle.
Partick C.C. Inverkip.
Plymouth Inst. P.S. Holbeton.
Sheffield P.S. Fox House for Higgart Tor.
Singer C.C. Dumbarton.
South Glasgow C.C. Formalin.

Sunday, August 19th.

Camberwell C.C. Brasted.
Hammersmith H.H.P.S. Merrow Down.
Leigh Lit. Society P.S. Liverpool Zoo.
Oldham P.S. Delamere.
Scarborough A.P.C. Flamborough and Filey.
South London P.S. Brasted and Westerham.

Monday, August 20th.

Luton and D.C.C. Ashridge.

How I make my EXHIBITION PICTURES

No.
CCXLII.

Mr.
CHAS. E.
ROLLINSON.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"METHOD is dictated by interpretation and objective. I regard photography as a craft and an end in itself, not merely a means to an end. I interpret its function not primarily to produce 'pictures,' but to depict actuality. Actuality can have many aspects,

"I work all the year through, and photograph anything I think worth recording. If I have a preference it is for sunshine effects and flower photography. My outdoor pictures are usually the result of observation, patient waiting, an alertness to take advantage of a fleeting opportunity.

"Many of my negatives are born to blush unseen; they never see the light of an enlarger. I am satisfied if a tenth are worth while.

"I have accumulated a battery of cameras, but my first and still my favourite is a $3\frac{1}{2} \times 2\frac{1}{2}$ reflex with an f/3.5 Aldis and an f/5.6 Dallon 9-in. telephoto. I use a Super Ikonta for speed work such as sea studies, sports, and the like. Exposures were at one time most carefully calculated; but now, except for all indoor work, I rely upon my judgment, erring, if at all, on the generous side.

"Very early in my photographic career (which, by the way, is just three years—I'm sorry I didn't start thirty years ago), I learnt that one acquired a surer technical control by sticking to one or two makes of materials; and now I use, almost exclusively, Verichrome with or without filter, for general work; Kodak S.S. pan. for portraiture and flower studies; and Ilford S.G. pan. for landscape.

"Development is invariably by time and temperature. I use Azol, and have worked out my own times, which are about two-thirds of the makers', and which give me a somewhat soft negative, not flat, with satisfactory shadow detail. I find Kodak Royal bromide in its various grades all one could wish for, developing with amidol for cool black, and with M.Q. for brown-black. I give a prolonged development to bring out the full range of tones.

"I am a purist, and consider handwork on negative or print, except what is necessary to cure technical blemishes, such as pinholes, a perpetration of a falsehood. I feel the same about multiple printing. Beyond the use of a diffuser, local shading and spotting, my exhibition prints are straight; I endeavour to depict the truth."

HOLIDAY.

Chas. E. Rollinson.

according to the vision and insight of the beholder; I endeavour to use what imagination I have been blessed with to embody an idea or a spirit in my work, and to produce something more than reportage. I am at variance with the 'modern' whose creed is a disregard of composition and a worship of the bizarre; who scorns sentiment and brings beauty down to matter-of-factness.

Sometimes I deliberately set out to make a picture of a chosen subject, and give time and thought to the best viewpoint to satisfy my sense of composition; the rest is a matter of choosing the best time for lighting. I am restricted to open air for portraiture, which perhaps is good for me, because I have a liking for a portrait with background, provided it has a definite identification with the subject.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

BOTH Nos. 1 and 2 of the prints reproduced on the opposite page have a certain similarity in that they deal with hilly country, but there is a very noticeable difference in the way in which they are handled. No. 1, "The Path to Stoney Middleton," by G. H. Walton, seems to be thought out and well designed, and No. 2, "Ullswater," by G. Noble, seems casual and haphazard.

Choice and Chance.

It is true that the second shows a departure from the level, but, while this could and should have been corrected before submission, it is not altogether that which causes an impression of casualness.

The tree on the right is not very pleasing in shape, and its blankness and depth of tone seem to indicate a marked degree of under-exposure. Moreover, it has the appearance, not of a deliberate inclusion, but of an inadvertent intrusion, whereas, with a little dodging about, it is only reasonable to assume that a respectable tree could be found in the vicinity to serve as the chief item; that a foreground of more pleasing form could be obtained, and that the present arrangement of middle distance and distance could be retained with nothing but insignificant differences.

If, in the revised edition, the principal tree be just as near, and of equal depth of tone, the exposure should be increased accordingly, for, as a glance at our monthly tables will show, the nearer the dark to the camera the greater is the exposure required.

Turning to No. 1, the care that has been exercised shows itself in both an artistic and technical superiority. On the former side, the effect of *contre-jour* sunshine makes a good motive; the figures are nicely placed, and the composition, in other respects, offers no serious ground for criticism.

Motive and Effect.

On the technical side, not only does the exposure given seem adequate, but the tones of the print are harmonious, and it is evident that the choice of a printing paper was properly considered in relation to the contrast range of the negative. The original

print is of excellent quality, but a linen-grained surface in so small a print is somewhat ill-advised. It is much too noticeable. It might possibly be tolerable in a print four or five times the size, but in this instance it breaks up the image too much, and to some extent spoils the "drawing."

A smooth matt surface would seem to offer an appreciable advantage over the present rendering, and, if another print be made, it might as well be chosen instead.

The adverse effect on the drawing impairs the pictorial appeal, inasmuch as the brilliant outlines, which are a feature of pictures seen against the light, are rendered in a somewhat indeterminate fashion, and the effect, which forms the motive, does not quite attain the degree of attraction it should. Nevertheless, the motive is there, and was very well seen indeed. It might be better expressed, but it is apparent, and it is in this respect that its superiority over the other is most marked, for, in comparison, No. 2 seems motiveless and devoid of any artistic intention.

The Pictorial Idea.

A similar idea is to be seen in No. 3, "The Halt," by R. A. Worth, where, again, sunlight on the figures forms the pictorial motive.

It is, perhaps, a little more in evidence than was the case with No. 1, but this is due to the larger scale in which the figures are shown. On the other hand, the effect scarcely attains the same force, partly because the figures are detached from each other instead of being connected, and partly on account of the fact that they are not quite so well placed.

The maximum effect of the sunshine is seen on the figure on the left, and it seems that she should be the chief figure of the composition. Her position, so near the left-hand edge, is weak. She should be more in the picture, and, to make the necessary adjustment, what is needed is an addition of about three-eighths of an inch to the left-hand side.

At the same time, the bit of sky at the top might be removed by trimming, for it has the effect of diminishing the value of the sunlight

on the figures below. In other respects, the arrangement makes up remarkably well, and the whole, as revised, forms an attractive little picture.

Attraction of Mood.

No. 5, "November Mists," by C. F. Birkin, has a different sort of attraction, its appeal lying in the mood it conveys. It provides a good impression of atmospheric mist, and this, as a mood, ranks equally as an effect as sunshine.

It may be more inclined towards melancholy or quietude than towards the joyousness of sunlight, but it has a beauty of its own, and, in this instance, that beauty is well suggested. The out-of-focus blurring of the image in the immediate foreground is, however, an unfortunate feature, particularly as it could easily have been avoided by an adjustment in focussing, accompanied, if necessary, by the use of a smaller stop.

To correct matters now that the negative is made involves a trim of about half an inch from the base. It does not altogether remove the defect, but renders it appreciably less noticeable. Nevertheless, it would really be better to retain the foreground if it were at all possible, for the composition is not so good without it; but, with the fault so pronounced, there is no alternative.

Length of Foreground.

The disposition of the subject material justifies the unusually long foreground, and its darks enhance the delicacy of the mood. It is for this reason that it would be better to keep it if possible; but, in the case of No. 4, "Early One Morning," by G. W. Cattermole, which exhibits a similar arrangement, there is scarcely the same justification, for the picture gains, rather than loses, from a similar trim.

The focussing, perhaps, is better adjusted, but, with no special interest in the near foreground, the wisdom of including so much is questionable, and, as far as the early morning effect is concerned, it does not seem to get across very well, partly on account of a measure of over-printing and partly because what lights there are are disconnected and very restricted in size.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

“WIND,” by S. K. Koparkar.

NOT only in conception, but also in execution and treatment is this picture exceedingly fine, and appreciably in advance of the average level. It is simple in arrangement, and the idea is therefore well expressed. It displays a good feeling for design, which makes for finish and completeness in its composition, and the effect of light and sunshine is remarkably well conveyed.

Simplicity in Arrangement.

Moreover, the nude figure is very well caught and shown in a graceful and powerful pose, while the way the different tones of figure, white draperies and sky are distinguished makes the work a technical triumph.

Simplicity is attained by the severe limitation of the subject material to the figure (1) as the centre of interest; the small amount of rock on which he stands; the draperies which, by the sweeping curve they suggest, lend an impression of decorative design; and the choice of an even and unobtrusive setting in the graduated blue of the sky.

The material could scarcely be further reduced without involving a sacrifice of some kind, yet, except for a feeling that it might possibly have been wiser to have included the whole of the curve of the draperies, it does not seem that any addition is needed. Even with regard to the inclusion in question, it is a matter of opinion, for, while it would afford a more definite statement of fact, it would leave less to the imagination. As the print stands, the full sweep is suggested, though not actually seen, and it is a moot point whether the suggestion is more effective pictorially than if the whole were included, or the reverse.

Relative Gradations.

Any alteration in this respect would, of course, involve an addition to the

top and a corresponding reduction in the scale in which the figure is shown.

That might not be any disadvantage, assuming the tone of the sky remained even, but which of the two arrangements would be preferred would, in the end, be determined entirely by individual taste.

In view of the fact that there is only

repetitive notes, and this form it is that creates the decorative effect.

It will be observed that the tone of the sky at the top is appreciably darker than it is at the base. Such a disposition of values accords with the impression a blue sky visually conveys, but it is one that is most difficult to record photographically. Nor is it easy

to render the darkish flesh tone of the figure; the brilliance of the white draperies in sunlight; the delicacy of the shadow tone; and, at the same time, to avoid spoiling the whole by a lack of gradation in the shadow portions of the rock—a contingency that has been successfully overcome.

Whether such an excellent rendering could be obtained without the use of a fully colour-sensitive emulsion, suitably screened, is doubtful, but, even so, a very nice degree of judgment is called for both in respect of exposure and the extent to which development of the negative was carried.

Art and Craft.

That such was exercised is evident from the exemplary way in which these distinctions have been recorded, and it is the high degree of craftsmanship that is responsible for the transmission of these values in all their subtlety.

On these values, and on their ordered arrangement depends the expression of the

effect of sunshine which forms the artistic motive. So that it becomes clear that the expression of the æsthetic idea is wholly dependent upon adequate technique in conjunction with a due regard to the requirements of composition; and that, before a successful picture can be produced, there must be the pictorial idea, a capacity for seeing that it is arranged in proper and intelligible order, and a technique that is sufficient for its full expression.

“MENTOR.”

the one figure, it is unnecessary to emphasise his predominance, which is, in point of fact, perfectly obvious, although it may be mentioned that his placing is perfectly satisfactory.

The impression of design, however, arises from the pose of the figure, with his slightly backward inclination, and the sweep of the draperies towards the right-hand side and their return to the rock at the base. Taking the two elements in conjunction, a shape of elliptical form is suggested, in which the inner and outer lines provide

SUMMER SEAS

By
H. QUENTIN REEVES.

WHEN I go down to the beach I always go well prepared with material for at least a dozen exposures, and also carry with me sky screens and light filters, for the importance of the sky in seascapes cannot be over-estimated. A blank sky is sufficient to ruin any sea photograph, no matter how beautifully it is composed and produced.

There are to-day no closed secrets as to how to obtain natural sky effects. Panchromatic material and filters are most commonly used, though I still prefer the graduated sky filters in conjunction with Verichrome film.

The density of the negative is a most important point. Fully exposed, the negative should be carefully developed to keep it on the soft side, and prevent any possibility of harsh contrasts. The negative may be slightly denser than a normal one so as to take full advantage of any available tones, while at the same time there is no danger of loss of detail owing to the nature of the subject.

The sky in nature will always be found to match the mood of the sea, and the photographer must try accurately to portray the present mood of the sea by choosing the most suitable height and viewpoint for his camera.

This does not mean choosing the height of the horizon, for that comes later, but refers to choosing the most suitable angle for showing to their best the shadows in the sand, the foam-crested edge of the sea, and the reflections on a

Low Tide, Birling Gap.

A Summer Sea.

wet beach left by a tide.

The height of the horizon has long been a debatable point, and there can be no fixed rule for its position. Its height plays a large part in illustrating the exact mood of the sea. Quite a good tip was once given me for approximately fixing this height. For normal views of calm seas taken from a beach, keep the horizon between one-third and one-fifth from the bottom. For rough seas, keep it one-quarter to a half from the top. This, of course, does not apply to photographs

taken from an elevated viewpoint.

Try to picture the sound of the sea from the illustrations. Can you hear the "shss shss" of the water as it swirls back over the sand and pebbles, or the soft boom of the breaking wave in "A Summer Sea."

The viewpoint of the third illustration is rather too far from the sea to transmit the illusion of sound; but perhaps if you were to stare intently into the sea around Beachy Head you might just catch a faint murmur from the water.

I find the sound of the sea a great help in defining the mood of the sea; and I judge the success or failure of my sea pictures by their ability to produce the pictorial effect of sound.

I realise, however, that this is a personal standard, and it would certainly not apply to all. Not only is beauty "in the eye of the beholder," but all sorts of other impressions derived from a picture depend mainly on what is in the eye and the mind of the observer. The selfsame picture has different messages for all who see it; otherwise its appeal would be much more restricted than it is. Fortunately the sea has a whole store of appeals.

Beachy Head.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A change of telephone number is announced by Messrs. Burroughs Wellcome & Co., of Snow Hill Buildings, London, E.C.1. In future it will be Central 4000.

The Ninth International Congress of Scientific and Applied Photography will be held in Paris from Sunday the 7th, to Saturday the 13th July, 1935, in the House of the Société Française de Photographie et de Cinématographie, 51, Rue de Clichy, Paris (IXe).

Members of the Camberwell Camera Club formed a strong guard of honour at the wedding of their President, Mr. Robert M. Barr, P.P.A., to Miss Elsie M. Randall, which took place at St. John's Church, Ealing. As the happy pair left the church an archway of tripods was raised, and a battery of cameras came into action.

Camera Lost.—On August 1st a Rolleicord Camera was stolen from a car outside a café in Exeter. The lens number is 1473967. Anyone being offered this camera, or otherwise obtaining information as to its whereabouts, should communicate with Messrs. S. A. Chandler & Co., Arcade Studio, The Arcade, Exeter.

Camera Found.—A No. 2a Auto-graphic Brownie has been found on the cliff walk between Deal and St. Margaret's Bay. It is little the worse for exposure. The film has been developed, and one of the subjects is a group apparently taken near the Margate Yachting Club. Any person claiming the camera should communicate with the Editor, indicating at the same time some of the other subjects on the film.

A new ciné colour process for standard 35-mm. films has just been introduced by the Keller-Dorian Colour Film Corporation. Some examples were recently exhibited to a specially invited limited audience at the Leicester Square Theatre, the subjects consisting of indoor and

outdoor scenes and seascapes on the Maine coast. The Eastman Kodak Co., of Rochester, N.Y., are manufacturers of the base, and are also acting as sole Sales Agents.

Owing to the demand for the lantern lecture on "Hadrian's Wall," Mr. Geoffrey E. Peachey has decided to concentrate upon that subject for Season 1934-35. Secretaries of photographic or kindred societies who would like to include this lecture upon one of the most impressive relics of ancient civilisation in this country in their syllabus, should submit a selection of dates between October, 1934, and March, 1935, inclusive, to Mr. Peachey, c/o *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1. Only very few vacant dates are now available.

Messrs. Burroughs Wellcome & Co. always keep a watchful eye on the needs of the photographer, whether amateur or professional, so that it is not surprising that they have added to their well-known Tabloid products a fine-grain developer. Those who are interested, as so many are in these days of miniature cameras, in a developer of the borax type will here find a first-rate one ready to their hand. With the Tabloids are full instructions as to the use of this developer, with time and temperature tables for dish or tank, and an indication of the variations demanded by different brands of sensitive material. For any and every kind of negative-making this developer is most satisfactory and reliable. A single carton contains the material for preparing 30 oz. of normal developer.

Messrs. Zeiss Ikon inform us that in all their 1934 roll-film cameras, with the exception of the Box Tengor, the observation window is effectively trapped to make the camera safe for panchromatic films. Earlier Zeiss models can in most cases be similarly adapted at a cost of 4s. 6d.

ENSIGN FOCAL-PLANE FILM CAMERA.

THERE are not many folding roll-film cameras of orthodox pattern with a focal-plane shutter, and so the efforts of Messrs. Ensign (High Holborn, W.C.1) to meet the wants of the photographers who are enthusiasts both for roll films and focal-plane shutters should meet with the approval of many of them.

The firm have produced a new popular model of their Autospeed focal-plane roll-film camera for £8 15s., which is considerably below the price of their standard model. This economy has been achieved by using the Ensar f/4.5 of Ensign's own manufacture, and by keeping the popular model to one standard type without variations in choice of lens. The shutter is an Ensign focal-plane with speeds marked from 1/15th to 1/500th sec.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, August 31. Rules in the issue of July 25. Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15.

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31-September 15. Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6; sending-in day, August 10; entry forms from Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26-September 30, 1934. Closing date for prints, August 10. Particulars and entry forms from the Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowoderska, 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Rd., Salford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

A noteworthy feature of this camera is that one movement sets the shutter for the next exposure and winds the film forward. This enables the worker to take a series of rapid exposures of one subject; eight pictures in eight seconds, if necessary.

Apart from the less costly lens the camera follows strictly the lines of the higher-priced model—it has rising front, cross front, two finders, and handy radial focussing. Incidentally, an important point in these days of pan. roll films, the camera has a little metal cover to the red window at the back to shield the back of the film from light. But better still is the fact that after the film has been set for the first exposure, the automatic film-winding device obviates the necessity to expose the back of the film to the red window at all when winding the film forward after each exposure. It is evident that much thought has gone to the design of this camera.

WITH ZEISS
TRIOTAR F/4.5
LENS, COSTS
ONLY
£10:10:0

THE ROLL-FILM MIRROR REFLEX FOR EVERYBODY

Rolleicord

Everybody says the Rolleicord is a marvel for the money. Hitherto the qualities of the Rolleicord have only been incorporated in the most expensive types of reflex cameras, but the enormous popularity of the Rolleiflex (many of whose patented features are included in the Rolleicord) has enabled the manufacturers to produce a mirror reflex camera of the very finest type within everybody's price reach.

In addition to its sturdy construction and handsome appearance, the Rolleicord possesses the following features: Increased brilliance of the Finder Lens. Compensation of Parallax. Round Focussing Knob, with metre scale always in same position. Absolutely Rigid Focussing. One-lever Compur Shutter, for setting and releasing. Frame Finder for sports pictures. Patented Film Guide. All essential parts enclosed. Alternative use of Filters, Proxars, Panorama Head, Stereo Fitment, Focussing Extension Hood and Iris Stop Takes 12 pictures on $3\frac{1}{2} \times 2\frac{1}{2}$ 8-exposure Roll Film for 1/-.

Supplied in unique patented leather case for £1 extra (case optional)—look for name Rolleicord stamped on it.

STOCKED BY ALL GOOD DEALERS

Speaks for itself !!!

BRITISH
MADE

There is no need to speak at length of the exceptional qualities of the SOHO PRECISION Camera. Read this extract from a letter recently addressed to the London Camera Exchange Co., Ltd., by an advanced amateur photographer:

"You may remember you recently supplied a Soho 'Precision' Camera to me, this is worth its weight in platinum, and is producing as good results as I formerly obtained with a half-plate triple extension camera."

We could ask for no better confirmation of our claim that the SOHO PRECISION possesses all the advantages of a FIELD CAMERA and is in addition as MOBILE AS A POCKET CAMERA.

THE SOHO PRECISION

PRICE: The price of the Camera for $3\frac{1}{2} \times 2\frac{1}{2}$ size picture, including 3 first-quality double plate-holders, but without lens, is £13:10:0. Leaflet with full specification and particulars of a wide range of lenses free on request.

CHILDHOOD and youth are ideal subjects for the hand camera at all seasons. This is why boating-lake photography will always hold its own. The boating-lake gives us a locality for snapshots; there is no need to wander miles and miles seeking subjects. Almost always subjects are there at the right time, and more than this, they are suitably complete. Harmonious backgrounds and brilliant foregrounds help to set off that intriguing subject of the child at play.

The kind of picture to aim at is the one where action of some sort is suggested. The start or finish of the race, an encounter with the swans, topical discussion, or minnow fishing. Action too rapid is not required. The longer the exposure given, the better the result in tone and gradation. Alternatively very short exposures should only be used on bright subjects when the daylight is quite strong.

You may be an advocate of stalking the children and snapping a back view, but I submit that the back views are least interesting, and that there is no need to be guilty of snapping without permission. Rather secure the co-operation of the children, and avoid the snap secured by stealth. Better pictures are made by introducing the camera as part of the game, and giving credit to the child's willingness and understanding to help create the picture-story.

BOATING-LAKE

By
DAVID LEIGH.

Photography

On the model-yacht lake.

The lady wins.

Just what that story is to be depends greatly upon the observation of the photographer, and his tact and ability to reconstruct the story seen, or to use the materials at hand in creating new stories. Tell the old stories over again; it is good practice to copy, but also strive for freshness of interest.

Your camera may be a reflex, or of the folding pocket type; both are suitable for the purpose, since critical focussing can be done. A little experience counts greatly. Some would do well with a box camera, even though the focus is fixed at distance. The secret is to choose those subjects that suit the limitations of your camera. The value of the reflex is of course the large size of the visual image, but the direct finder comes a good second, without the extra bulk. Fit a direct finder to your camera to-morrow, and use it. We read much in the advertisements about using fast films for dull light and ordinary films for strong light; well, you cannot do better.

With such simple backgrounds to be found around the boating-lakes it would seem impossible to go wrong. Yet there is no harm in reminding readers that the background can make or mar a good group. This is another reason for making young camera friends young amateur photographers of the future. If our picture-story is right except for the background setting, it is generally possible to arrange a repetition with a more favourable point of view, including watching crowds.

Large groups cannot of course be posed, but in a general way best snaps are made when the figures can be placed to advantage. Camera consciousness is easily avoided by centring the children's interest in their pastime. The interest of the boating-lake goes beyond that of model yachting if we wish. Lessons of the waterside can there be more easily, safely and interestingly illustrated. The nature study of aquatic plants, fish or insect life, by means of the camera is worth while, especially if the child is there to give the note of appreciation.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Ciné Amateurs Use Holidays

By M. A. LOVELL-BURGESS.

HOLIDAYS are not allowed to dim the enthusiasm of members of the Eastbourne Amateur Ciné Enthusiasts' Club, who are living up to their official title by refusing to discontinue studio meetings during the summer.

The monthly gathering of the club was held recently at the Oak Cabin Café, and Dr. J. Bodkin Adams presided over a large attendance of members and visitors.

The possibilities of the 8-mm. film were discussed and demonstrated by a local amateur, Mr. B. C. Windle, who showed a film of school life made on Ciné-Kodak Eight. Mr. Windle is keen on games, so that it was not surprising that school sports were depicted.

Another local amateur, with, however, much longer ciné experience, Mr. H. T. Terry, projected some worthwhile shots of mountaineering in Switzerland. Another film shown by Mr. Terry was definitely a home production, in that the story had been written at home and acted by his young grand-children. It was entitled "Gumperley's Guy Fawkes Day Dream."

Members of the club are now at work on their entries for the club's summer competition, in connection with which many handsome prizes are being offered.

I.F.M.A. Summer School.

It is possible that the I.F.M.A. Summer School, which was held at Digswell Park Conference House, Welwyn Garden City, over the August Bank Holiday week-end, will prove to be, in the amateur ciné world, the outstanding event of 1934.

The school marked a definite advance in the relations between the professional and the amateur.

On the Saturday, for instance, Basil Wright lectured on "Cutting," and Stuart Legg on "Shooting." In the afternoon a working party of amateurs went out under the supervision of Mr. Legg, and in the evening,

Mary Field, whose educational work for the professional films is so well known, lectured on "The Instructional Film."

Mr. Peter A. le Neve Foster, President of the Manchester Film Society, and a pioneer of the amateur ciné movement, gave an account, on the Sunday, of his experiences in Moscow, and in the evening John Grierson lectured on "Sound." This lecture was followed by a display of films by the G.P.O. Film Unit. Many people well known in the professional and amateur ciné world were present, and the importance of such contacts to the movement as a whole cannot be over-emphasised. Then there was plenty of practical work and plenty of opportunities to see the work of fellow amateurs. The results of such a school as this are far-reaching, and

amateurs owe a debt of gratitude to the Independent Film Makers' Association.

I Hear:

That the British Film Institute, whose official organ is "Sight and Sound," are also arranging a Summer School.

That at a recent meeting it was agreed to form a body to be known as "The Hamilton and District Amateur Ciné Society," and that a projection night will be held early in September. Mr. R. Moffat, 49, Scott Street, Hamilton, Lanarkshire, is Hon. Secretary.

That an exhibition of cinematography will be held in the Royal Photographic Society's Galleries, 35, Russell Square, W.C.1, during November, and that in conjunction with this exhibition there will be held a

Such a jolly subject as this does not present itself every day, but when it does appear it should be filmed forthwith.

film competition, including a section limited to amateurs. All entries must reach the Secretary, R.P.S., on or before the 1st October, and full particulars can be obtained from him.

That there are now twenty-five members of Aberdeen's Ciné Society. They have elected Mr. G. S. Henderson as President, and are already at work on a 9.5-mm. picture.

I am always pleased to receive letters dealing with the amateur ciné movement. They should be addressed to me, c/o *The Amateur Photographer and Cinematographer*.

Making a Merry Christmas—Now

CHRISTMAS is coming. Such a statement seems unpardonable when summer holidays are in full swing, but the amateur cinematographer must plan ahead. When your pictorial efforts are in demand at the family Christmas party, it's no good wishing you had made this shot or that during the days of good light, or when the weather was suitable for an outdoor set. Now is the time to prepare your Christmas production.

Let us develop the idea in practical form with a bright member of the family starring as Father Christmas, supported by a cast of delighted children of any age, with all the incidental "eyejoy"—that's a good word for the cinematographer—of the festive season. Ninety per cent of the shots for such a film, be it thirty or three hundred feet in screen length, can be made in the average garden.

It's a safe bet that the family and friends of any amateur cinematographer are heartily sick of just looking pleasant in front of the cinematic eye, and are ready to do anything with a story or plan behind it, in the effort to become real screen players.

We must have a story. Adopt and improve upon this suggested plot, according to your circumstance, family and facilities.

Christmas approaches, and activity in the house develops with the expectancy of a good time and good cheer. The trappings and gee-gaws of Yule appear, and the fun of anticipation—what fun anticipation is in real life—can be portrayed by the camera. Then comes the great day, and by means best suited to the producer the welcome visitor arrives with his sack of presents. He is offered a welcome and distributes

parcels to the lucky folk, and then departs. The story may then be developed until the close of the day. Almost every producer will find in this theme enough material for any production if he proceeds in the right way. Screen plays must be planned, and the best plans are committed to paper, and probably rewritten before satisfaction is achieved.

Let us set down in scenario form the suggested theme. First, number each shot you will have to make. Secondly, the type of shot—close up, or medium full shot. Then a brief description—"Father carrying parcels." Finally, the approximate duration of the shot—10 seconds. Our plan of action will then appear in this form.

Shot 1.—Title, "The Welcome Visitor," 8 sec.; Shot 2.—Close-up, Fade in—Calendar for December, finger counts days to Christmas Day, 10 sec.; Shot 3.—Medium Full Shot, person carrying parcels, or getting out of car loaded with parcels, 10–15 sec.; Shot 4.—Close-up, hand placing letter in letter-box, 6 sec.; Shot 5.—Close-up, hands taking Christmas Card from envelope, etc., 10–12 sec.; Shot 6, Medium Close-up, child examining stocking and finding hole in toe, 8–12 sec.; Shot 7.—Medium Close-up, father bewildered by garlands, artificial Christmas tree, glass tree decorations, 10–15 sec.; Shot 8.—Medium Close-up, father on step ladder hanging up garlands, hits finger with hammer, 12–15 sec. Etcetera, according to theme.

The main essential is to get one's ideas down on paper, with a definite plan in view; the character and possibly humorous viewpoint of each shot, together with the approximate duration. This will give you an exact working programme, and, more im-

portant still, a fairly accurate estimate of the amount of film required and the expense involved.

Now about the "studio" and properties. In cinematography the best screen effects are obtained with close-up and medium-length shots, and it will be obvious that most of the shots in a film of the character suggested will fall into these categories. A little ingenuity, therefore, in the matter of back-cloths will enable camera work to be undertaken at this time of the year. Where interior shots are absolutely necessary, a well-lighted attic, with light distempered walls and a movable light reflector, will provide an ideal studio. Good pictures are made by such equipment with an f/3.5 lens and panchromatic film. Also garlands, pictures, a mirror or clock are easily fixed or removed as required. Walls papered with a "fussy" patterned paper, even if of a light tone, should be avoided. A splendid light reflector, which may also be used as a projection screen, can be made by painting with flat white a large-sized board of plywood, say about 48×36 in.

The "props" required are of everyday character, and readily obtainable at small cost; items such as a Christmas card, a spray of artificial holly and mistletoe, Christmas crackers, tree decorations, and a lot more of the joyous nonsense associated with Yuletide. A few rolls of red and white crêpe paper in the hands of someone clever with scissors and needle will provide a wonderful robe for Father Christmas, and a false beard, preferably white or grey, will complete the illusion. Imagination and enterprise on the part of the producer will ensure a success that will "bring down the house." H. K. MORRIS.

"CHARCOAL BLACK"

A NEW printing paper of outstanding quality, and giving prints of exceptional beauty, is being put on the British market. It is known as "Charcoal Black," and already has a considerable vogue in the United States. It is made by the Dassonville Co. of San Francisco, and is obtainable in this country from the sole agent for the British Isles, George H. Potts, Loudwater, Rickmansworth, Herts.

"Charcoal Black" is made in several grades, from "A," a very thin white drawing paper, to "G," extra heavy "opaline parchment"; "D" is a very attractive grade—a rough paper with surface similar to Whatman drawing paper. This should be very popular. Apart from the surface textures available

with this printing medium, its chief characteristic is the exquisite matt quality of the image and the perfect range of tone gradations obtainable. It is a paper that gives a definite individuality to prints, and can be commended for exhibition work.

"Charcoal Black" is a development paper of approximately the speed of normal bromide paper, and can be printed, enlarged and developed in the same manner. Formulae for M.Q. and amidol are given with each packet, and full working directions. While the cost of the paper is in excess of bromide, its quality justifies the price. Full particulars and sample prints can be obtained on application to the address given.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Bleacher for Bromoils.

Can you give me a reliable solution for bleaching bromide prints for bromoil work, and indicate how it should be used? G. H. E. (Southampton.)

There are many such solutions, and each bromoil worker has his own preference. That of Mr. C. J. Symes is for:

| | |
|-------------------------|-------------------|
| A. Copper chloride | .. 160 grs. |
| Common salt | .. 2 oz. 300 grs. |
| Hydrochloric acid | .. 3 min. |
| Water | .. 10 oz. |
| B. Potassium bichromate | 55 grs. |
| Water | .. 10 oz. |

The working solution is A, one part; B, one part; water, two parts. Bleach the soaked print thoroughly in this, wash out all removable stain, fix for five minutes in 10 per cent hypo, wash well and dry.

Plain Hypo.

I understand that in some cases it is better to use plain (not acid) hypo for fixing bromide prints. If this is so, what are those cases?

E. L. F. (Rochdale.)

The only cases we can recall are those in which the bromide print is to be sulphide toned, or used for bromoil purposes. It is quite safe to use plain hypo for bromide prints, so that this can be done if there is any uncertainty as to their future treatment.

Safe-lights.

I am considering the equipment of a dark-room. Should I have two separate lamps, with appropriate safe-lights, for developing negatives and prints respectively? S. T. E. (London.)

This is quite unnecessary. You can get a single lamp with two or more interchangeable safe-lights, and in the ordinary way this is all that is necessary.

Grain in Enlargements.

Is it really possible to produce from small negatives enlargements sufficiently free from grain to be suitable for exhibition purposes?

W. L. S. (Northampton.)

You should not allow yourself to be terrified by the grain bogey. Many of the very finest exhibition prints of to-day are produced from negatives that by any standard would be classified as "small." These negatives have been properly exposed and developed, and the enlargements made on a suitable paper; and neither those who make the pictures nor those who took them are reminded that there is such a thing as grain in a negative—as there always is. It is quite possible to get obtrusive grain in a print, just as it is possible to get false tone values; but neither is inevitable.

Jig-saw Puzzle.

I have an idea that some time ago you published instructions for making a jig-saw puzzle from a photograph. If so, can you refer me to the article?

S. R. (Rochampton.)

An article on the subject, with an illustration, appeared in the issue for December 14th, 1932.

Anhydrous Carbonate.

I am aware that one part of anhydrous sulphite is equal to two parts of crystals; does this apply also to anhydrous carbonate?

R. E. L. (Bromley.)

No. You should reckon one part of anhydrous carbonate as equivalent to 2½ parts of the crystals.

Strip Negatives.

I develop my spools of film by "see-sawing." Is there any way of giving longer or shorter development to any given section? W. M. (Bath.)

It is a simple matter to cut the strip into sections with scissors, as the divisions can be clearly seen even in the dark-room. You can then continue with the negatives separately, and modify the development times as you please.

Aerial Focussing.

Will you please explain what is meant by "aerial" focussing, and what is the method of procedure? C. M. E. (Leicester.)

This method of critical focussing can only be adopted with the aid of a focussing magnifier or eyepiece. This is a magnifying lens fitted in a brass mount with focussing adjustment. A fine mark is made with a hard, sharp pencil on the ground glass of the focussing screen, and the focus of the magnifier is adjusted so that the mark is dead sharp, and this must be the adjustment for future use. A small circular piece of glass is now cemented over the pencil mark with Canada balsam. The image thrown by the lens can be examined at this clear spot through the eyepiece. This image is very brilliant and not modified as elsewhere by the grain of the focussing screen.

Exposures with Pinhole.

Is there such a thing as a formula for working out the exposures with the same pinhole at different extensions? M. M. (Deptford.)

Fortunately there is. Two things must be known—the diameter of the pinhole as a fraction of an inch, and the distance in inches from pinhole to plate. Work out the exposure as if the diameter of the hole were the f/ number, and multiply the time of exposure so found by the square of the pinhole-plate distance. For example, suppose that the pinhole measures

1/30th of an inch, and that it is 8 inches from the plate. Suppose, further, that the exposure for the subject at f/30 is half a second; multiply this by 64 (8²) and the exposure will be 32 seconds.

Drying Net.

What exactly is a drying net?

J. A. G. (London.)

It is a piece of thin, finely woven fabric, such as butter muslin, which has been thoroughly washed out to remove any dressing, and then attached by opposite edges to two rods or canes. It is slung up something like a hammock. The prints are surface-dried and laid face downwards on the net, where they dry quickly, and with less curl than if they are pinned up.

Hyperfocal Distance.

How can I find the hyperfocal distance of the lens on my camera? How is it used when found? H. E. A. (Sunderland.)

Your questions rather suggest that you do not understand what is meant by the term. There is no such thing as one definite hyperfocal distance. You must first decide what degree of diffusion is permissible—100th, 150th, 200th of an inch, or what. You then square the focal length of the lens, multiply by 100 (or 150, or 200, etc.), and divide by the f/ number of the stop. The result will be the distance on which to focus to get the greatest depth of definition with your lens used at that particular stop.

Enlarging Distance.

What is the rule for finding the distance from lens to easel for a given degree of enlargement? T. B. (London.)

Take the number of times of enlargement (2, 2½, 3, etc. diameters), add 1, and multiply the result by the focal length of the lens in inches.

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

EXCHANGE NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

NO. 1 Autographic Kodak Special A, 3½×2½, Wray Universal f/6.8, Compur, 1 to 1/300th sec., yellow filter, hood, £4/18/6; lens alone cost £5.—Waltton, Parkgate, Wirral. [3276]

T-P. Reflex P.C., f/4.5 anastigmat, rapid back for metal slides, recently overhauled at works; first £10 secures.—Brigham, Bridlington. [3281]

ROSS Panros ½-pl. Focal-plane Camera, Ross Xpres f/4.5 lens, 6 D.D. slides, F.P.A., in solid leather case; new condition; a bargain, £8/10.—E. Mead, 19, Princes St., Cavendish Square, W.1. [3282]

PILOT Reflex, two on V.P., f/3.5 Tessar, Compur, new condition, £11/5; cost £18/15; deposit system willingly.—Nutter, 245, Selhurst Rd., South Norwood, S.E.25. [3283]

1-PLATE Roll Film Camera, f/4.5 Tessar lens, 4 Compur shutter; new condition; bargain, £7/10.—Box 1206, c/o "The Amateur Photographer." [3284]

BALDAX (2 on 2½×2½), Meyer f/2.9, D.A. Compur; as new, list £9/5; £7.—Gittins, 29, Main St., Shildon, Co. Durham. [3289]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

SOHO Postcard Reflex, 5 double slides, F.P.A., leather carrying case, no lens, perfect condition, £10, deposit system; Busch f/3 7-in. Double Portrait Lens, rack focussing, Waterhouse stops; reasonable offers entertained.—Womersley, 178, Bradford Rd., Shipley. [3240]

REALLY EXCELLENT! The NEW NORFOLK

THINKS THIS CUSTOMER!

“I acknowledge safe receipt of the New 'Norfolk'
Camera, etc., and can safely say that there will be
no question of exchanging the camera, as it seems
to me that it is a very fine piece of workmanship.”
H. W. A. G. (London).

3½×2½ Plate & Film Pack Camera
F/3.5 ZERANAR Anastigmat Lens (4½-in. focus),
COMPUR delayed-action SHUTTER.

This is a precision instrument constructed of a light alloy,
strong, but of very superior finish. Rising and cross front,
both actuated by micrometer movements. Clear and direct
vision view-finders.

The Zeranar lens gives very critical definition and is equal
to most lenses at double the price. Price **£6:15:0**
only

...and you do **BEST OF ALL** at **WALLACE HEATON'S**

—WHETHER IT'S FOR MOVIE-MAKING
OR THE BEST 'STILL' PHOTOGRAPHY,
WE HAVE THE CAMERA TO SUIT YOU

We offer the best service, too! The expert advice we give, and the very easy payments for any purchase, make it really worth while to come to Bond Street. We willingly allow approval to postal-buyers against full cash deposit. Our range of apparatus is the best and most varied in the country, and our stock of used bargains are the finest value ever offered. Try Wallace Heaton for your next purchase and see the time and money you'll save.

WE ARE THE LEICA SPECIALISTS—EVERYTHING IN STOCK

LEICA MODEL III With F/2 SUMMAR LENS

With automatic focusing, enabling lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement.

£33 : 13 : 0

Nine monthly payments of 78 6.

LEICAMETER (as illustrated)

Specially constructed for Leica users. Complete with carrying strap... **£8 : 10 : 0**
9 monthly payments of 19 10.

THE NEW 617/2 LEICAMETER

Possesses the additional advantage of making indoor recordings. Built on the photonic light-cell principle. No batteries. **£10** Nine monthly payments of 23/4. FIRST AT BOND STREET.

DON'T MISS THOSE LOVELY "AGAINST-THE-LIGHT" PICTURES

The Zodel Collapsible Lens Hood (patent applied for) allows you to take pictures almost directly into the sun—combining portability with light weight and the greatest possible measure of protection. The Zodel hood has three sliding sections so designed that they cannot chafe and wear away the dead-black lining which ensures absence of reflection. An adjustable rectangular mask at the front ensures that the cone of light entering the camera is of such shape that internal bellows reflections are almost non-existent, resulting in greatly increased brilliancy of negatives, while the adjustable sunshade-flap can actually be set to cast a shadow over the inside of the hood for really exacting work.

Use a Zodel hood always. It measures less than an inch in thickness (closed) and will go easily into your camera case. Push-in filter holders to carry standard 1 1/4 or 1 1/2 in. circular glass filters are available.

Make a resolution to make every exposure with a Zodel hood in place. You will be amazed at the improvement in your results.

Size A, to suit lenses 1 to 1 1/4 in. diameter.....7s. 6d.
Size B, to suit lenses 1 1/4 to 1 1/2 in. diameter.....7s. 6d.
Filter Ring, Size A, for 1 1/4 in. glass filter.....2s. 0d.
Filter Ring, Size B, for 1 1/2 in. glass filter.....2s. 0d.
Make sure you specify "ZODEL," the best lens hood ever designed.

All-metal 3 1/2 x 2 1/2 ZODEL de LUXE

THE CAMERA FOR FINE SERVICE.

With f/4.5 anastigmat lens. Delayed-action Compur shutter, rising and cross front, double extension. Very small. Metal body.

£6 : 17 : 6

Nine monthly payments of 16 1.

FOR HOLIDAYS! TO PAY FOR YOUR CHOICE

write and tell us—we will soon see you well fixed up.

'PHOTOKOP'

For "still" or "cine" cameras, the Photokop gives a direct reading without reference to tables of Scheiner degrees, or calculations of any kind whatsoever.

£5 : 5 : 0

Nine monthly payments of 12/4.

LEICA MODEL III With F/2 SUMMAR LENS

With automatic focussing, enabling lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a long and every negative makes a splendid enlargement.

£33 : 13 : 0

Nine monthly payments of 78/6.

CINÉ-KODAK JUNIOR

The cheapest 1/3.5 16-mm. camera for 50 ft. film, daylight loading. Strongly constructed. Makes splendidly clear movies.

£13 : 13 : 0

Nine monthly payments of 31/11.

TWO LATEST FREE CATALOGUES

One contains all the latest 'still' and cine apparatus and accessories—the other is packed from cover to cover with the finest used but fully guaranteed bargains. Send for your copies now. **POST FREE FROM ANY BRANCH.**

3 1/2 x 2 1/2 SALEX DE LUXE

Folding Pocket

For plates, film packs or roll films.

Light steel body, covered in morocco leather, rigid stirrup front with rack rising and rack cross adjustment, full double extension, brilliant reversible and direct frame finders, spirit level, infinity catch and focussing scale. Saalexon 1/3.8 anastigmat, Compur sector shutter, with delayed action, hooded focussing screen, flushed for tripod, complete with 3 single metal slides.

£8 : 8 : 0

Nine monthly payments of 19/8.

PHOTOGRAPHY MADE EASY

By R. CHILD BAYLEY
Author of "The Complete Photographer,"
"Hand Cameras," "Photographic
Enlarging"

AS EASY AS A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

CONTAX

THE SUPREME PRECISION MINIATURE CAMERA OF UNIVERSAL APPLICATION

The all-metal Contax focal-plane shutter gives exposures of $1/2$, $1/5$ th, $1/10$ th, up to a guaranteed $1/1,000$ th second.

Controlled by one knob, the Contax gives four groups of speeds, all of which can be altered either before or after winding shutter.

1. **TIME GROUP**
Time and $1/2$ second.
2. **NIGHT PICTURES GROUP**
 $1/5$ th and $1/10$ th second.
3. **NORMAL GROUP**
(for average subjects) $1/25$ th, $1/50$ th, $1/100$ th second.
4. **SPORTS GROUP**
 $1/100$ th, $1/200$ th, $1/500$ th and $1/1,000$ th second.

CONTAX can do more

than other miniature cameras because, besides the shutter superiority, it possesses the following valuable features:—Choice of ten Zeiss lenses $1\frac{1}{8}$ " to $7\frac{1}{8}$ " focal lengths. Apertures $f/8$ to $f/1.5$. Six reflecting surfaces only. Detachable back for easy cleaning and attaching plate back, focussing screen and dark slides for scientific work. Sensitive material is daylight loading 24×36 mm. spools—orthochromatic and panchromatic. Long base extremely accurate range-finder. No rewinding of films necessary, therefore no scratched negatives. The following Contax publications will be sent free on request: "The Connoisseur and the Contax," "The Ten Contax Lenses," "Accessories for Contax Photography."

Vol. LXXVIII. No. 2389.

WHAT with the fine weather, and the ever-increasing use of fast panchromatic material, it is not surprising that this season we have received from readers a larger number than usual of complaints on one particular point. This is the unsatisfactory processing of such material when entrusted to some D. and P. operators. We say "some," because there are many reliable firms to whom such work can be given with complete confidence. In most of the cases where we have received complaints the negatives were absolutely ruined. One firm gave as an excuse the fact that they had to take on temporary assistants during the summer rush. This is poor consolation to the sufferer, but we can well imagine the amount of skill, knowledge and experience possessed by these casual "hands." The obvious course for the amateur is to hand his exposed films and plates only to firms with an undoubted reputation for carefulness and capability; or, as a wise alternative, to learn to do such work himself.

Photographic Centenary in Colour.

It was a happy idea to take a direct colour photograph of the recent celebration at Lacock Abbey of the centenary of Fox Talbot's invention, and the one-exposure colour camera on which Mr. W. T. P. Cunningham has spent so much ingenuity, pains, and money, produced a result worthy of the occasion. It is a very charming picture of the entrance to Lacock Abbey and of the group on the steps. The faces, at least in the colour block reproduction, are sometimes a little difficult to identify, and the colour process appears to play a curious

TOPICS of the Week

AT MEVAGISSEY.

An article on "Holiday Photography in a Small Port," appears in this issue.

trick whereby people look fairer than they really are. Dark brown hair becomes auburn, for instance, and black a pleasant gray. But instead of picking out minor faults, one may well wonder that it should be possible at all.

Tempting the Palate.

A class of subject not often attempted by the photographer, although he comes into very intimate contact with it three or four times a day, is meals, by which we mean the arrangement of eatables on plates and dishes. Just at present in a commercial photographer's window not far from Chancery Lane there are some choice examples of photography along these lines. With appropriate lighting and arrangement, eggs and bacon can become almost divine, even more appetising as seen on the print than they are in reality. Salads are perhaps a trifle too fussy to attempt, and cakes and the like need very careful handling if they are to appear edible at all; but in the window aforesaid there are some excellent examples of fruit and other dishes. To those who care to take the necessary pains, and also to bid their appetites wait awhile, there are many possibilities in the breakfast or dinner table; not the general ensemble of plate and napery which makes the conventional picture, but the isolated dish with its more or less artistic contents. The most ambitious effort which the artist along this line has attempted, however, is a trayful of cups and platters for washing-up, just placed higgledy-piggledy on the tray, with the scraps of food and slops of tea remaining. The thought strikes us that housewives should insist on some such picture as

this having a prominent place in the dining-room where it will catch the husband's eye.

A Dark-room in an Ambulance.

A well-known London radio-grapher tells us of some of the curious pitfalls which lie in the path of the interpreter of the X-ray photograph. The ordinary person might suppose that just a single silk garment would not interfere with the view of the bones and tissues, but, in fact, both artificial and real silks are loaded with metallic dyes, and these may simulate in the picture the appearance presented by disease. Again, all photographic emulsions, but especially the emulsion coating of an X-ray film, are very sensitive to pressure, and if a film is withdrawn hurriedly from the paper wrapper there may easily appear on the negative what might be an abnormality of some sort to cause perplexity to the examining physician and surgeon. Our informant, by the way, Mr. H. T. Ferrier, has had a very great deal to do with the equipment of the X-ray ambulance of the Order of St. John and the British Red Cross Society, serving the hospitals of London and the Home Counties. In addition to the X-ray equipment,

the ambulance contains in its rear part an excellently-fitted dark-room, in which the temperature of the developing, fixing and water tanks is electrically controlled. An illuminated viewing screen allows inspection of the wet films under ideal conditions.

How the Talkie Talks.

A pretty stiff holiday task it has been to assimilate Dr. C. E. K. Mee's recent Trueman Wood lecture on photographic aspects of sound recording. A great amount of study has been devoted during the last five years to the photographic problems which arise in connection with the recording and reproduction of sound, and a general understanding has been reached as to the principles involved, and the conditions which bring about satisfactory quality in the sound reproduced. What we liked most about Dr. Mee's lecture was his schematic representation of the cycle of operations in sound recording—twelve operations in all, including as No. 1 the note emitted by, say, a saxophone in the film studio, and as No. 12, the reception thereof by the ear of the listener wherever the spool of film is carried. The saxophone (or the bleat of the sheep, or the lowing of kine, or any sound

you like) emits pressure waves which a microphone converts into electrical energy. This is amplified, and operates a galvanometer which is so designed that the variations in electrical intensity are transformed into variations in the intensity of a beam of light. These variations are photographically recorded on a moving film, which is developed and printed on a positive film, which is also developed, and then, in a projector, controls the intensity of a beam of light from a lamp. The light transmitted by the film falls on a photo-electric cell and is converted into electrical energy, which energy, after amplification, operates a loud-speaker which re-converts the electricity into sound. The reproduction thus takes place through six transformations. The sound is converted into electricity, the modulations of which are transformed into variations of light intensity, these then produce chemical transformations by the photographic process, the silver deposit produces changes of light intensity which are transformed into electrical variations, and these finally into sound by a loud-speaker. And to think that at the end of it all the glorious accent of America is conveyed to British audiences!

UNSPPOOLING ROLL FILMS

THE easily-made accessory shown in the accompanying illustration is intended to simplify the task of unspooling roll films, and to ensure that scratching and curling—frequent experiences where unspooling is accomplished by hand—are entirely avoided.

The accessory consists simply of a pair of wooden blocks, each carrying a small projecting boss by means of which the spool is retained loosely in position. If desired, the blocks can be mounted on a small stand; but for greater convenience they may be countersunk flush with the edge of the bench or table.

When using, the spool of exposed film is taken into the dark-room and slipped into position between the projecting bosses—one of which is retained in position by means of pressure from a small flat spring. The paper backing should then be removed with the left hand, the right being free to remove the film where it is attached to the backing.

The dimensions of the accessory are to some extent dependent upon the size of film being dealt with; but in most cases a short piece of 1-in. planed wood should be found satisfactory for the uprights. For the metal bosses, use may be made of a couple of French nails—one of which must be firmly secured into its block, whilst the other is made to slide loosely within a hole previously made with a small gimlet.

The flat tension which serves to control the loose boss can be improvised from a corset spring or from a shoe stretcher (obtainable for a few pence from Woolworth's stores).

Two bench slots—suitably spaced—may then be cut for the accommodation of the device. Gimlet holes (made through the blocks and into the bench itself) are a great aid to attachment—which is accomplished by means of a couple of thin wood-screws driven well home into the bench. The cost of this simple accessory is practically negligible, whilst all constructional work can be finished by the amateur himself in a very short space of time.

Holiday Photography

INLAND

All holidays are not spent by the sea, and the enthusiastic photographer will be at no loss for subjects inland. A few hints and suggestions are here offered on the work to be done.

THERE are many good reasons for spending a holiday season, when occasion offers, on or near the sea. Among them are the health-giving and invigorating effect, especially on town-dwellers, and the special character of certain amusements and recreations not to be enjoyed elsewhere. To the photographer many attractive and popular subjects are there available, and the lighting conditions make for successful results. Even far from the sea, however, there are many compensations, and no lack of camera subjects of a different and by no means inferior character.

Landscapes.

It is beyond dispute that many of the most distinguished masters of photography have their reputations founded on landscape work. To some extent pure landscape has been neglected in recent years by both photographers and painters. We hear that of the pictures sold at this year's Academy very few were landscapes. This can be but a passing phase, for really good landscape work can never lose its appeal.

For this work it is an advantage to use a camera which permits of a careful study of the subject, full size, on a focussing screen. Faults in composition which might be overlooked as excusable in a necessarily hasty snapshot are not permissible in serious landscape work. There is no excuse for haste or carelessness, and the subject should be selected and arranged with meticulous care.

Colour-sensitive material and suitable filters must be employed, so as to do the fullest justice to colour values; and it must be remembered that the sky very often plays an important part in landscape compositions. As with a portrait subject, care must be taken to secure the "character" of the subject, whether

its theme be moor or mountain, hill or vale, woodland or marsh.

Village Subjects.

We yet have many villages still unspoilt, and their rustic beauties will provide many delightful subjects as they have for generations past. Not all the sweet Auburns have fallen into decay, or, worse still, been "modernised," and the observant photographer enjoying a country holiday will easily find plenty of subjects to test his skill.

For some aspects the handy hand camera will prove its value, especially for records of village life and character. Field and farm will provide opportunities for real picture-making; and such pleasant subjects as old windmills, watermills, barns, churches and humble homesteads must not be overlooked.

In Towns.

It may happen that a holiday is spent in and about an actual town. The subjects to be found will depend on the character of the town, but subjects there will assuredly be. More than likely the architectural photographer will find himself in his element.

There may be a cathedral; possibly a castle; certainly buildings of interest in some form or another. Here again the stand camera will often be required, as the same care must be given to the exact arrangement of architectural subjects as in the case of pure landscape. A point should be made of learning something about the town beforehand, so as to be aware of subjects of special interest—historical, literary, archaeological and so on.

The Rovers.

Most of us are rovers nowadays, and it is more than likely that our holiday will be spent in no one spot, urban or rural, or even in one district. Coaching or hiking, by

car or cycle or train, we may travel about and see more of our country in a week than some of our forefathers saw in a lifetime.

In such cases we shall reap the benefit of the small and light apparatus fortunately available. Our camera will not be a burden, but a comfortable and helpful companion, ever ready and capable. It will do us excellent service everywhere and at all times, and with no real trouble at all it will provide us with a store of pictorial mementoes of where we have been and what we have seen in highways and byways, in busy towns and sleepy villages, and out in the wide spaces and amongst the hills.

Wasted Chances.

With such opportunities it would be a thousand pities to waste them, and some of them will assuredly be wasted unless we take the trouble to understand our apparatus and material, and learn to use them with readiness and skill. If we are wise we shall learn to do more—to make our own negatives and prints. We know what we have seen, and what we wish to convey to others when we show them our holiday harvest of photographs.

Some such harvests of records of a really glorious inland holiday do not arouse the interest or give the pleasure that might reasonably have been expected, simply because we can show nothing but the stereotyped mass-production prints so familiar that they breed the contempt which they too often deserve. Our holiday photographs should be on a vastly higher plane than that.

The cinematographer need be under no misapprehension as to finding plenty of good "movies" inland. They will be different from seashore subjects, but there is no reason whatever why they should be in any sense inferior.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

DEVELOPER TURNING BLACK.

SIR,—In your page of queries, August 8th, a reader asks for guidance in the making of developers. I think the cause of his trouble lies in the fact that *sulphate* of soda is being used instead of *sulphite* of soda. The supplier might not know the necessity of using sulphite of soda, the sulphate (Glauber salt) being much more familiar to the ordinary "chemist."

In England, sulphate of soda (Glauber salt) is usually sold in pea crystals, whereas in Scotland it is usual to supply feathery crystals; therefore there is less chance of a mistake.

I had a case of this kind; an amateur went to a local "chemist," who had recently taken up the sale of films and D. and P., and asked for carbonate of soda and sulphite of soda to make pyro-soda developer. The developer was made up with the chemicals supplied and the film developed. The result would have made a sun-bather envious. The film was brought to me for expert opinion. After enquiries were made and a few tests, I discovered that sulphate of soda (Glauber salt) had been used in compounding the developer.

One very curious point came out during the examination: the amateur was a teacher of chemistry in a secondary school.—Yours, etc.,

JOHN CUMMINGS.

SIR,—In your issue of the 8th inst. you published a reply to a query concerning M.Q. developer which turned black; in your reply you state you have not heard of this trouble, but that you suspect the sodium sulphite.

When I first started making my own developer, I made up M.Q. and had precisely the same trouble, and I should not be surprised if your querist has made the same mistake as I did, that is, mixed the metol, hydroquinone, and then added sodium carbonate before the sulphite, which causes the solution to change colour immediately. Perhaps if this were pointed out to your querist his trouble would be remedied.—Yours, etc.,

J. A. HARRIS.

A MINIATURE CAMERA.

SIR,—Mr. R. E. Dickinson in his letter printed in your August 8th issue, alleges the superiority of the 16-on-120 film camera over the ciné-film type. He objects that the latter is "too small, too heavy, too expensive, and too difficult to use." I do not think he can be speaking from experience of the type, or he would realise the untenability of all these objections, barring, perhaps, the last but one.

Let us compare the Leica III and the Zeiss Super Ikonta (small model) as typical examples of the two classes, both having f/3.5 lenses of unsurpassed reputation, both automatic focussing, and shutters comparable (though the Leica possibly has the advantage here).

As to size of negative, this is of no importance, since in both cases one has to enlarge. No miniature camera can beat the ciné-film type for sheer ability to produce enlargeable negatives. As to weight, I have not the figures handy, but surely it is only a few ounces difference, and that is hardly worth considering.

With regard to expense it is perhaps harder to establish equality. Admittedly the *first* cost of a Leica is about £8 10s. more, but in use the smaller type is far more economical, especially for the man who uses his camera a good deal and likes to take several views of a promising subject. To take a low amount, say, eight or nine exposures a week, as a basis for calculation. In super-panchromatic film this will cost the Ikonta user 9d. a week, or approximately £2 a year, while a length of film producing thirty-six pictures in 24×36 mm. size can be obtained through an advertiser in this paper for 1s. 6d. This works out at 4½d. a week, or 19s. 6d. a year, though this is halved in my own case, as I pay 9d. per spool in bulk. Probably most miniature users consume easily double this amount per week, and many quadruple (£4 a year saved). This saving mitigates the higher first cost a great deal, as the difference is made up in a year or so, and for the rest of the camera's life it is saving money at the same rate.

It is also easier to handle the ciné-film type in processing

as the perforated edge protects the actual picture. While on the subject of costs, the camera Mr. Dickinson finally bought, the Dallmeyer Dual, costs, as a matter of fact, very much the same as a Leica Standard, I believe, both being non-automatic focussing. He has thus not chosen a very happy example for his argument, on the score of price, anyway.

As to a Leica or Contax being too difficult to use, surely this is not so. The automatic winding is a boon only appreciated to the full in actual use, as is also the resultant quickness in successive exposures. If objection is raised to spooling difficulty, surely any dealer supplying film will do this for the customer, and at least one advertiser in this paper offers this advantage.

In his last paragraph Mr. Dickinson gives away one point. No ciné-film type camera has to be made panchromatic-proof, as there is no red window.

Has Mr. Dickinson ever experienced the marvellous handiness of the Leica depth-of-focus ring, actually readable on the lens collar when setting the focussing scale? It has revolutionised my methods of setting the distance. And if he and I were to set off together on a world-tour, he would presumably arrive on the boat with a suit-case of No. 120 panchromatic films (unless he fancied he could obtain them at each port) while I would merely insert in my luggage a 5-in. by 1-in. round tin containing 100 ft. of ciné film, sufficient for 684 exposures!

I have no interest in the Leica or any other camera, nor in any photographic business.—Yours, etc.,

"MINNIE A. CHURE."

SKY FILTERS.

SIR,—If Mr. J. H. Barnett will act on his own suggestion, and take the trouble to draw the paths of the rays through the lens of his camera, he will see, as the attached diagram clearly shows, that with the lens at full aperture, a graduated sky filter will have little or no effect (as such), if placed near the

lens either in front or behind, or between the lens components. The effect would be as shown at either of the positions marked X, where rays of light from *every* part of the subject would pass through *both* upper and lower portions of the filter.

If, however, the lens is stopped down, and the filter placed as far as possible from the lens (without interrupting any rays to the corners of the plate) the effect would be, as at Y, of a filter somewhat larger than the lens aperture, applied to the rays of light before they have become mingled as before.

It would thus appear that in most cases stopping down the lens to a small aperture would increase the ability of the sky filter to confine its attentions to the upper portion of the picture.—Yours, etc.,

D. RODNEY HALSON.

PRICE OF FILMS.

SIR,—The other day I was nearly foolish enough to purchase a quarter-plate roll-film camera. I abandoned the idea when I learned that the film costs 2s. for six exposures—4d. per exposure.

In this connection I notice a curious anomaly, for a spool of 2½×4½ costs only 1s. 5d. for eight exposures—2½d. per exposure. Unless my arithmetic is at fault, the ratio of 4½×3½ to 4½×2½ is as 13.81 to 10.625. I think it can be reasonably assumed that the relative cost of manufacture should be at least in *about* the same ratio. That being so, surely the quarter-plate size could be marketed at about 2½d. per exposure.

It seems that the makers are trying to do away with any possible enthusiasm by the public for what has for years been a most popular size.—Yours, etc.,

J. E. TUCKER.

YOU CAN ALWAYS DO BETTER AT

The ENSIGN MIDGET

A Real Vest-Pocket Edition.

Taking 6 pictures 3×4 cm., costing only one penny each. All-distance lens, 3-speed shutter, 1/25th, 1/50th, 1/100th sec., T. and B. **30/-**
 F/8.3 Ensign anastigmat model. **50/-**

THE BALDAX

Takes 16
Pictures on
Standard
 $3\frac{1}{2} \times 2\frac{1}{4}$
Roll Films

F/3.5 Meyer Trioplan anastigmat, Ibsor shutter, speeds 1 to 1/150th sec., T. **£6 : 5 : 0**
 and B.
 Nine monthly payments of 14/7.

F/3.5 Meyer Trioplan anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. **£7 : 7 : 0**
 and B.
 Nine monthly payments of 17/2.

F/2.9 Meyer Trioplan anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£9 : 5 : 0**
 Nine monthly payments of 21/7.

The VOIGTLANDER VIRTUS

Takes 16 pictures on standard $3\frac{1}{2} \times 2\frac{1}{4}$ Roll Films.
 Fitted 1/3.5 Skopar anastigmat, Compur shutter, speeds 1 to 1/250th sec., T. and B., spring-out front, hinged back, built-in direct-vision finder. **£11 : 7 : 6**
 Nine monthly payments of 26/7.

THE WESTETTE

Takes 16 pictures on V.P. Film.

F/2 Xenon anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B., complete in purse case. **£12:17:6**
 Nine monthly payments of 30/-.

Garden Life

By W. PYE.

PHOTOGRAPHY and gardening make excellent twin hobbies.

Flowers, fruit and vegetables have their life-stories, full of interest and attraction while they grow, and photography can capture each phase for permanent records when their natural life has ceased. Some garden products are more suitable for following up than others, but charming subjects like the accompanying rose-bud series are easily taken.

Any type of camera will serve, even

the box-form, but the latter will require either a supplementary lens, or some form of lens adjustment for close-up subjects, in order to get a reasonable sized image. A tripod or other support will be necessary for the camera. See that the lighting comes from the right or left, so as to get relief and modelling instead of flatness, and take each picture about the same time of the day. Morning and evening are preferable to midday.

Keep the background subdued and out-of-focus, taking care to avoid spotty high-lights. A temporary background can be quickly improvised with a sheet of uncreased paper of suitable colour, and attached down two edges

to stakes driven in the ground. If the subject trembles in the wind, a stake driven into the ground close to the stem and tied, and exposure made during a still period, will help to overcome this trouble. The stake must not appear in the picture.

Colour-corrected films or plates are desirable for this work, and exposures gauged as "near subjects" will be about correct. Beware of over-development, as this will tend to chalkiness of the high-lights.

Before taking the first subject, bear in mind that the final picture needs to be kept within the dimensions of the film or plate, and a suitable distance estimated accordingly.

8th day.

10th day.

12th day.

Holiday

By D. KIN.

The pleasure steamer.

THERE are many small ports around our shores, adjacent to both inland and sea-side holiday centres. To visit one during some portion of the vacation makes a pleasant change, and is certain to provide interesting relaxation and new photographs.

The giant liners may be missing, but there is no lack of sea-going craft, and the fact that they are on a smaller scale is often an advantage. It will also be found that one is more free to wander about without permit when looking for pictures and viewpoints.

When planning a visit it is advisable to select, if possible, a period of high water coinciding with morning or afternoon sunlight; the former making for greater activity in the harbour, and the latter, of course, for better photography. But especially in a small port do I advise that if a subject pleases,

Pumping air for a diver.

A corner of Dartmouth.

anchorage for a small fishing fleet. The slowly dying "sails," in the shape of barge, brig and schooner, are often to be seen alongside the quay, while upon this will be groups of fishermen or children.

When the loading or unloading of merchandise takes place there are sure to be opportunities for excellent "shots." These will demand a quick eye and a fairly fast shutter speed, but direct light is assisted by that reflected from the waters of the harbour and

Photography in a SMALL PORT

the bogy of under-exposure is unlikely to be present.

But if a camera with only a simple shutter is used, it will be found that many of the subjects mentioned can easily be taken by waiting for the moment of least movement. Often a group is almost stationary, or a movement in working often repeated, so that it becomes possible to choose the exposure time with an eye to the most attractive arrangement and effective lighting.

I always find that one point needs very careful attention when photographing from the edge of a quay. This is the minimising of the effect of that awkward angle of stonework, which so often cuts across the lower half of a photograph. Dockside gear can sometimes be found in a suitable position to fill this, but in any case it is well, when using a short-focus lens, to allow for a liberal trim from the bottom of any print which shows this feature.

A quayside argument.

Unloading the barge.

Apart from its exaggerated perspective, the nearer portion is almost sure to be out of focus.

The development of most seaside negatives needs some adjustment in comparison with that of those taken inland. The strong reflected light causes a lack of contrast, so that development can be carried a good deal farther than for a similar subject photographed away from the sea. Increasing the normal time allowance by half will be suitable for the majority of negatives made during an expedition to one of Britain's small ports.

Painting the rigging.

How I make my EXHIBITION PICTURES

No.
CCXLIII.

Mr. W. G.
KENNINGS-
KILBOURN.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"ABOUT thirty years ago I was the proud possessor of a quarter-plate box camera, and my first experience of photography was obtained while crouching inside a dark cupboard with a smoky oil lamp for company. Since then, and until two years ago, I considered photography as a means of recording family likenesses, etc., and although during this period I had many different cameras, and did all developing and printing, photography as a vehicle for artistic expression never occurred to me until I joined a camera club and visited the R.P.S. exhibition. This aroused my enthusiasm; the purchase of a horizontal condenser enlarger, dishes, and chemicals in bulk soon followed, and in due time my first prints were submitted to the club judges.

"Helpful criticisms set off by encouraging remarks were soon forth-

coming, and such erudite expressions as 'chiaroscuro,' 'intersection of the thirds,' etc., opened up quite a new field of thought.

"Why all these 'high-brow' technical words and phrases over a simple photograph?

"Further investigation seemed necessary, so 'The A.P.' was ordered, textbooks were read and the history of photography was studied from its infancy.

"By now I was really enthusiastic. Many ancient cameras were purchased for their historical interest, and many happy months were spent in testing their capabilities.

"It should encourage beginners to learn that several of my winning prints were taken with the cheapest form of $2\frac{1}{4} \times 2\frac{1}{4}$ roll-film box camera. My favourite camera now is a quarter-plate Shew 'Xit' with a Goerz Dagor

f/6.8 lens, and although I occasionally use other cameras with f/4.5 lenses, I always feel that the old Goerz has something the others lack.

"How I make my exhibition pictures' can be answered very simply. Scrupulous care is always exercised, whether preparing a print for exhibition or otherwise. Bromide or chloro-bromide paper is used, and the developer is specially mixed to suit the paper. The composition of the subject on the easel is treated as a fine art, and no time spent in this way is ever begrudged. Paper is not spared to find the correct exposure, which to me means detail in the high-lights with no loss of shadow detail.

"Sometimes it is necessary to 'sun down' or 'shade' a portion of the print; but apart from this, all my serious work is straightforward photography. I admire the skill of those who are able to print in skies from a separate negative, at the same time keeping the tonal qualities of the sky and landscape in accordance with nature; yet to me, most prints produced in this way lack a very subtle 'something' which is difficult to define.

"The development of plates or films is always carried out by inspection (panchromatics being first desensitised). I use the slowest speeded plate that circumstances permit, which, with the usual M.Q. developer, produces a negative of fine grain, permitting enormous enlargement.

"Like many others, I await the time when prints in colour can easily be obtained direct from one negative. Any monotone rendering of our colourful world, however true the tonal values may be, is to me but a poor representation of nature. Will some unusual process solve the problem?

"To-morrow will be Friday' was taken on a very dull and overcast grey afternoon. As will be seen from the reproduction, the scene was inspired by the well-known picture 'Thursday.' The 'monks' were rehearsing for the Pageant of Runnymede, and I felt that such an opportunity should not be allowed to pass without a pictorial record of the scene."

BYGONE MEMORIES.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

IN a collection of subjects which, in some aspect or other, have a connection with the sea, No. 4, "Stern," by R. G. Lake, seems to strike an individualistic note, for there is something out of the common, not only in the fact that the material has been restricted to a portion instead of the whole of the vessel, but also in respect of the angle from which she has been viewed.

The Individualistic Touch.

The height of the viewpoint lends the quality of novelty to the perspective lines, and the limitation of the subject matter to that which is sufficient to form a design of attractive shape enables the representation to invite an interest without conveying a suggestion of eccentricity.

Whether the picture was obtained by means of a chance shot or by deliberate intention has not been disclosed. In the first event, a measure of credit is nevertheless due on account of a more or less instinctive realisation of the possibilities, and, in the second, a greater degree of commendation is deserved. Nevertheless, and however obtained, the result displays that touch of individuality, in embryo, that distinguishes the work of the artist from the more laboured efforts of the uninspired craftsman.

It has personality, and, in its class, is very promising indeed. It is the sort of thing that, with suitable treatment, could be made into quite a pleasing exhibition picture.

What it needs is a little accentuation of the effect of sunshine, and, in the enlarged version, a print of somewhat greater vigour, and of that richness of quality that comes from technical perfection.

Accentuation and Emphasis.

The effect, at present, seems to be spread over most of the picture, and, to provide it with point and value, its expression should be definitely localised.

If a figure in a light-toned dress had happened to be present, and had been caught somewhere in the neighbourhood of the helm, that figure, assuming it struck a brighter note than anything else, would appear as a note of culmination. It would not only provide the required touch of

accentuation, but would also serve the function of concentrating the interest in the effect on the figure.

However, as a figure of the necessary character was not available, the emphasis that is needed might be secured by heightening the light on the steering box, which, at present, is just a shade lighter than its surroundings.

That light tone needs to be exaggerated so that it stands out luminously against the bulwarks, which are also in sunshine above. The easiest way of brightening up the point in question would be by the application of one of the transparent dyes, made for the purpose, to the negative, the dye being laid on little by little until the required degree of distinction has been attained.

It is possible that the slight extra vigour might be imparted by the process of enlarging, but quality in the print depends on its receiving just the precise measure of development that the particular grade demands. Reference to the many textbooks available will give full information on this side of the question, which is much too wide to deal with in an article of this description, or the instructions, which accompany each packet of paper, will afford a useful and reliable guide.

The Exhibition Season.

The two big exhibitions of the year, The London Salon of Photography and the show of the Royal Photographic Society, open early next month, and, while it is too late to submit entries to the latter, the closing date for the Salon is the 29th of this month.

The standard of these shows is exceedingly high, and acceptance at either represents an achievement; but, while it is too much to expect that a beginner would meet with success, there is no harm in trying, although it might be preferable for the various club shows and exhibitions in the provinces to be chosen for a start. Be that as it may, it would be wise, for those who are able, to pay a visit to both exhibitions while they are open, for not only will they provide an idea of what is possible in pictorial photography, but they will also prove inspiring and helpful.

The part that personality or individuality plays in the conception of each work will be readily discernible, just as it is, in a minor degree, with No. 4. It is this which causes it to stand out from the rest on the page, and this that gives it its attraction.

Possibilities and Probabilities.

None of the others seems to display the same quality, although there are possibilities in No. 5, "In Vigo Harbour," by R. Crookes.

The white sail stands out exceedingly well against the setting of sea and sky, and the reflections are interesting. The presence of the quay in the background, however, offers a drawback that is practically insuperable, for nothing can be done with so hard a line. If the setting were limited to sea and sky only, the probability is that something might be done with the subject, but, as it stands, the prospects are remote.

No. 3, "Arethusa," by F. Mytton, has good lines in its composition, and the sky is nicely clouded. The sky makes quite an effective setting, but is not sufficient, in itself, to lend the print a pictorial appeal, which, owing to the proportion devoted to the landscape, should find expression there.

Skies and the Picture.

To carry an artistic attraction in itself, a sky must have sufficient appeal to dominate the picture. Besides this, it should have a considerably greater proportion of the picture space than the landscape.

Neither of these conditions is satisfied in the print in question, nor are they in No. 2, "Coming Home," by T. Chadwick. The sky, here again, is good, but it can scarcely be said to dominate the picture, nor has it the needful majority of space.

The steamer is very obviously the centre of attraction, but its appeal is topical rather than pictorial, and the print can only be said to serve its purpose—and quite a useful purpose, too—as a record. Nos. 1 and 6, "En Voyage," by A. Bickerton, and "Capitano, Vancouver," by V. W. McMillan, exhibit a motive of similar nature, and, as far as they go, may be regarded as no less successful.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"WHO'S AFRAID?" by M. R. Gates.

IF there be just a touch of sentiment attaching to the subject of this picture, it is nevertheless interesting in other aspects, for it portrays a nice effect of sunshine, and is highly expressive of a characteristic childish mood.

Mood and Effect.

Strictly speaking, it is as a child study that it appeals in the first instance, and the effect is secondary; but, in view of the difficulty in conveying any suggestion of sunshine when practically the whole area of the picture is under its influence, it is noteworthy how well it is expressed.

It will be seen, however, that the whole setting is in half-tone, and pretty even. There is a certain amount of gradation in it, but no appreciable contrast. In the figure itself (1) the case is the reverse, for the difference between the tones of sunlit flesh and the darks of the hair and bathing-dress is extreme, so that the effect is concentrated and strictly localised. The darks make the sunshine evident, and, as there are none in the setting apart from the figure, its effect therein is negligible.

For all practical purposes, therefore, the sunlight falling on the setting does not count or rank as part of the effect. In this respect, the way it has been dealt with will serve as an example of how the effect could be emphasised in No. 4 of the prints discussed on the preceding page, in which a similar contrast in the vicinity of the helm would produce a no less effective concentration.

In this instance, besides localising the effect, the contrast is useful inasmuch as it vastly appreciates the attraction of the figure.

Stress and Contrast.

A light alone, or a dark alone, in the midst of an area of more or less uniform half-tone, will inevitably

attract the attention. The truth of this is easily demonstrated. Take a piece of neutral-tinted paper—brown, grey, or buff will do—and put a small white piece of paper on it. The eye will be immediately attracted by the light note and will tend to disregard the surrounding tint. Take away the white paper and substitute a piece of black for it. The black will exercise

between the two, interest will be more or less equally divided. If, however, the white and black pieces are placed together, the pull of the two will be greater than either by itself, and, in a picture, the same thing applies, particularly if, at the same time, the contrast of tone is strongly placed.

Here, the strongest tones and the greatest contrast of tone appear within the figure, and, for the reason indicated above, that alone would ensure its principality; but it is also placed in close proximity to one of the points of intersection formed by divisions of thirds, and each of these positions, provided the others are unoccupied, forms as strong a point of attraction as any other in the picture space.

The Function of Composition.

In addition, the figure, as the sole human element, has a certain innate pull, and this, taken in conjunction with the attraction imparted by force of position, and by the concentration of interest afforded by contrast of tone, renders its dominance unquestionable.

It thus provides one point upon which the attention is centred, and, in so doing, the main function of composition is satisfied.

There are, it is true, many other factors which are governed by the rules of composition. The question of form, for instance; the value of line and mass; the relationship of primary and secondary accents, and the establishment of interconnection between all parts of the picture, are all within its province.

None of these elements enters into this case because of the simplicity of the setting; but it is on account of the admirable way in which the composition has been managed that the study succeeds so well in its fine representation of childhood.

"MENTOR."

the same power of attraction as the white. If the black and white be placed on the tinted paper at the same time, but in different positions, the one that will attract the most attention will be that which affords the most contrast with the setting; i.e., if the tone of the setting is nearer the light than the dark, the latter will have the greater pull, and if the surround verges towards the dark, the light will be the most prominent. If the setting is midway in value

Photographing a Village Church

By **RICHARD PENLAKE.**

A "TOPIC of the Week," in *The Amateur Photographer* dated August 8th last, tells of a rector of a Northamptonshire village who noticed that photographers pointed their cameras at the church tower and then passed obliviously along. "They always took one particular point of view, and they never troubled about any other treasure, pictorial or archaeological, that the village might have to reveal."

as much ground as possible, they pass on.

Most village churches are prominent features of a rural landscape, and one has little or no difficulty in locating them. As a rule a village church is centuries old, and most of them deserve careful inspection, outside as well as inside, and a walk round a church will often reveal views very much better than what may be called the general view.

For many years I have lived opposite a church which stands on one of the East Anglian main roads, and I have seen many motorists and hikers stop to photograph the view. The church is nicely situated in a picturesque spot, and coming upon it rather suddenly after a long stretch of uninteresting country the view appeals to many, and exposures are made—ninety per cent of them from the same spot.

In front of the church is one of the largest chestnut trees in the district, also the village green, on which stands a war memorial cross. Some photographers try more or less successfully to dodge the tree and the memorial cross, while others do their best to include them, especially if they are aware of the fact that Bunyan, Wesley and Spurgeon once preached on the spot where the cross stands.

After the general or postcard view of the church and tree, the view most photographed is the one showing the tree, cross and church tower. Off the beaten track one may do very much better. If the photographer would spare five minutes and go to the western end of the church he could include some picturesque thatched cottages, and get a picture which has figured on a railway poster, in guide books and in the Press, a view that has brought some photographers many a cheque.

In the churchyard, which few camera-users

West door and window.

trouble to explore, can be obtained a pleasing view of the west door and window, also one of the old church porch and parvise chamber, a rarity nowadays, which antiquarians come many miles to see. From the back (north side) of the church a pleasing composition may be found, especially at wild-flower and blossom time. Although these remarks apply specially to one church the same ideas are applicable to most churches and buildings elsewhere.

Verily, old village churches deserve more attention than the modern tourist photographer gives to them, and the Rev. H. O. Cavalier, of Little Brington, is to be complimented on the work he has done.

The "postcard" view.

Not only in this particular village, but in many others, touring photographers do the same. Apparently, their idea is to get a general view as a souvenir of their visit, and having secured it, and being anxious to cover

War Memorial Cross.

The west view.

With the Beginners

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SELF-TONING PAPER.—III.

ALTHOUGH, for some reason or none, I do not like glossy prints on self-toning papers, some brands are made for glazing. The process is not quite so simple as with gelatine-coated papers; most self-toning papers are collodion, and they are liable to curl obstinately, while if roughly handled the surface may crack and the print be spoilt.

A print masked and trimmed so as to show a narrow plain margin always looks well, especially if mounted in an album with leaves of a different tint from that of the print. As self-toning prints are more or less warm in colour mounts and albums should be white cream, or some shade of brown rather than grey.

In spite of the extravagance of the method it is worth

while at times not to trim and mount a print, but to mask the print on a piece of paper large enough to make a mount unnecessary. Double-weight paper is best for the purpose. For this plan a larger printing frame is required; e.g., a 3×2 print could be made on a half-plate sheet of paper. A sheet of plain glass is fitted to the frame, and the negative laid in position on it; then comes the mask, and then the paper. Great care is necessary to make a neat and accurate job of it.

It was once the fashion to print tint borders round the print, and sets of masks were made or bought for the purpose. The effect was often good, but the operations were tricky, and not always successful. The truth is that a print masked on a larger sheet of paper is inclined to look rather bare and unfinished. My own remedy for this was to "plate-mark" it.

A genuine plate-mark is the impression made by the copper plate when an etching is printed; and if a similar impression is made on a masked print the idea is not to suggest that it is an etching, but to secure that subtle finish which a plate-mark gives. Here is a way of doing it.

When you cut your mask do not throw away the little rectangle of paper you have cut out, but paste it on a bit of smooth hard card such as thick Bristol board. Trim the card so that it leaves a margin all round the piece of paper you have stuck on it. The width of the margin decides the distance of the plate-mark from the print all round. Now get a piece of tracing-paper a little larger than the card, lay the card on it, and run a pencil round the four sides. You then have a rectangle drawn on the tracing-paper the exact size of the card. Also get two pieces of stout strawboard rather larger than the paper on which you have made the print.

Lay down a sheet of strawboard, and put the print face upwards on it. Adjust the tracing-paper on the print so that the pencil line forms an even border round it. Fit the small card exactly to the pencil line, and lay the other strawboard on top. Now run the whole sandwich through the rollers of a mangle and back; or put it in a copying press and screw it up tight. The pressure will force the card into the paper, and make a depression exactly like the plate-mark of an etching. A certain amount of gumption is required, or the card may slip out of position; but if I can do it, surely you can.

The pencil line round the print in the illustration is to suggest a plate-mark. A real one would not show in a reproduction.

And now to repeat a method of intensifying

a negative when you want to use it for self-toning paper, and find it is not strong enough for the purpose. Even if you do not propose to use such paper, you are sure to have negatives from time to time that would be all the better for strengthening. The best plan is to put such negatives aside till you have a batch, say, of a dozen, and then have a field-day for the purpose. Not that it takes a day, but you had better be prepared to give at least a couple of hours to it.

In 10 oz. of hot water dissolve 100 grs. of potassium bichromate, and when cold add 50 minims of hydrochloric acid. What the chemist sells as "commercial pure" will do, but I prefer the "pure." This amount of solution will easily do your dozen negatives even if they are as large as quarter-plates.

Put the first negative in a clean dish, and pour the solution over it. Rock the dish gently and continuously. Very quickly the black image is changed to a yellow one. Look at the back of the negative, and hold it up to the light, too. There must not be a trace of black left even in the densest parts. Transfer the negative to clean water. If the negatives are films a dish will do; if they are plates you should have a rack and tank.

Bleach all the negatives in turn, and then proceed to wash them. This is where you must be patient. There

are ways of removing the bichromate stain quickly, but there is nothing so good as changes of water and patience. After a time no more bichromate can be washed out. Of course, the image itself remains yellow, but the rebates should be quite clear.

Any "clean" developer can be used for the next step—amidol, M.Q., Azol, Rytol, Rodinal, or anything of the kind; but better not use pyro. For some time I have been in the habit of using the amidol which Messrs. Johnson put up in a tube. It will make 10 oz. of solution inside a minute, and this again will do your dozen negatives.

As soon as this or a similar solution is poured over one of the negatives, the image begins to darken again. Keep on till it is black right through, and then a bit longer to make sure. When you have done this to all the negatives they must be washed again, but not for so long as before. There is nothing obstinate to wash out this time.

If you have bromide or gaslight prints that are weak and poor in colour, give them exactly the same treatment. I have sometimes hesitated as to whether or not to throw away an enlargement, and have put it in an envelope marked "Intensify." When I have accumulated a few I bleach and redevelop them just as I have described, and more often than not they have been worth it.

W. L. F. W.

Making a Proof from a Negative while WET

WE are often in a hurry to have a test of a negative which we have just developed, and endeavour to dry it rapidly, but often with ill effect. However, anyone can now have a proof almost immediately by adopting the following method, which I use with perfect results.

Well dry the glass side of the plate with a wad of cotton-wool or any fine soft cloth, carefully holding the negative in the left hand. This being done, apply on the gelatine one piece of cellophane a little larger than the negative. Care should be taken to prevent any fold or crease. I find the

quickest way is to place the negative flat and use both hands. If it is on film then use two pieces of cellophane, one before and one at the back, because the film absorbs the wet and cannot be dried like the glass. Then place in the printing frame in the usual way.

When the printing is finished the cellophane can be gently removed by drawing off with the thumb and finger, as shown in the illustration. The washing and drying may then be done in the usual way. The cellophane may be used over again after leaving suspended to dry, held by a metal or other clip. H. BARKER-BLAND.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, August 22nd.

Camberwell C.C. Print and Slide Competition.
Hucknall and D.P.S. Clifton and Barton.
Luton and D.C.C. Ashridge.

Thursday, August 23rd.

Bury P.S. Toning. Councillor Nichols.
Hammersmith H.H.P.S. Carbro. G. E. Oakley.
N. Middlesex P.S. Lantern Display.
Twickenham P.S. Portfolio by Marcus Adams.

Saturday, August 25th.

Accrington C.C. Scriddles Farm.
Bath P.S. Cheney Court, near Box.
Beckenham P.S. Norbury Park to Leatherhead.
Belfast C.P.A.C.C. Mahee Island.
Bradford P.S. Castle Carr and Luddenden Dene.
Bristol P.S. Wick.
Exeter C.C. Windy Cross and Idestone.
Hackney P.S. Chigwell Lane.
Hull P.S. Goathland and Whitby.
Ilford P.S. Temple. Meet at Liverpool Street Station, 2.15 p.m.
Nottingham and Notts P.S. Newstead Abbey.
Photographic Society of Ireland. Poulaphouca and King's River.
Sheffield and H.P.S. Longshaw. Moorhead, 2.30 p.m.
Sheffield P.S. Caulton Pastures. Meet at Moorhead, 1.30 p.m.

Saturday, August 25th (contd.).

Small Heath P.S. Shenstone.
Stafford P.S. Longdon.
Stockport P.S. Disley-Pott Shrigley.
Walthamstow and D.P.S. Oxshott. Meet at Oxshott Station, 3 p.m.

Sunday, August 26th.

Harrogate P.S. Secret Motor Ramble.
Medway A.P.A. Eynsford.
Singer C.C. Callander.

Monday, August 27th.

Southampton C.C. Amateur Portraiture Evening.

Tuesday, August 28th.

Hackney P.S. "In and about Town." T. Y. Unwin.
Manchester A.P.S. Contact Printing. R. P. Hyde.
Nelson C.C. "Gadgets" Discussion.

Wednesday, August 29th.

Camberwell C.C. Evening Ramble—Westminster.
Partick C.C. Print Criticism.
Rochdale P.S. Winter Syllabus.
Stockport P.S. Members' Questions and Answers.

*A*mateur Cinematography

Hints on Directing By ORLTON WEST.

AT four out of the seven amateur film studios I have visited recently, I have found so-called film directors busy on almost any job except directing. I have watched them placing cameras, adjusting lights, fetching last-minute properties, and doing all kinds of odd jobs which, in the wisely organised production unit, are left to the assistant director, cameraman, continuity clerk, and other helpers in the good work.

Now if a director's time and energy are to be wasted upon a hundred minor details, he ceases to be an effective director at all. The poor fellow cannot see the forest for the trees, and the general quality of the production suffers in consequence.

Since it is the director's job to co-ordinate the various efforts of the technicians with those of the players—in short, to captain the whole team—he should concern himself solely with making general decisions on treatment, and managing the players.

Rehearsals are usually the beginning of trouble for the amateur director. He may have described all manner of startling action and technical feats in his scenario, and visualised the tremendous climax in which the hero floors the villain with a mighty stab with a carving knife—in his own imagination. But to try and persuade a group of flesh-and-blood actors to put those same ideas into practice on the set during rehearsal is a much more difficult matter.

Indeed, the director who can get his cast to convey to an audience one-third of what he intends is lucky.

Among professional directors opinions differ as to the form rehearsals should take. "The directors of early sound pictures believed a two weeks' rehearsal of the entire script was necessary," Lothar Mendes, the Hollywood director, says; "but they were wrong. With extended rehearsals, we would have a period of two weeks or more between the rehearsal and the filming of the scene. With intervening effort concentrated on other scenes, it is not human for the actors to remember how the scene was done in the try-out.

"I have come to the conclusion now that every player should read his script and know it well before production starts. A single cast reading with the director is all that is necessary to give the players an idea of the story and characters. Afterwards it is more economical and makes for better performances to spend a few minutes in rehearsal before each scene."

That is quite a good idea, and might well be adopted by the amateur.

It is not at all easy for a director to induce his players to work together as a team, and not as competing individuals, especially when they are not well acquainted with one another, or are unequal as regards experience and self-confidence.

To get the best out of them, he must employ all the powers of tact, diplomacy, and persuasion of which he is capable. He should be the section leader encouraging a party of

equals, rather than the schoolmaster driving a class of incompetent children.

Sometimes he has to resort to subterfuge to gain his ends. For example, the other day I watched a well-known director trying to persuade a girl to laugh heartily and naturally at a joke which was annoying her husband. But she was nervous, and could only produce a restrained little laugh.

What did this director do? With infinite patience he talked to her about her childhood days, until she was entirely at her ease telling him a story about her aunt in the country. Then he encouraged her to dwell upon some incident which had struck her as humorous, until he had her rocking with laughter. And the cameraman got busy.

The skilful director does not shout his instructions. Dragooning is most unpopular with amateur players. It only scares the timid and sensitive, and puts everybody's back up. Both

The launching of a lifeboat, whether for practice or service, is a first-rate subject for the amateur.

August 22nd, 1934

during rehearsal and actual shooting a quiet, self-possessed manner is the most effective, providing a director knows, in his own mind, exactly what he wants done. Even the most blatant egoist, who is out to exert himself as loudly as possible, and so hamper everyone about him, is most effectually subdued by a quiet determination on the part of the director.

What degree of freedom should be permitted to a player in the interpretation of a role? Some directors, famous for their distinctive and original style, attempt to instruct their players in even the smallest movements and expressions. They will insist upon a knife and fork being held in a special way, or a foot being moved forward at a particular speed. They will spend hours trying to get their cast to do things exactly as they wish them to be done.

But after watching several professional film directors at work in the studios, I have come to the conclusion that the too-meticulous method is not the most fruitful. Once you have agreed with your leading lady as to the general effect to be produced by, say, a sudden outburst of tears, it is wise to let her achieve it in her own way, by the methods which she knows through experience. If her individuality be allowed to exert itself within these limits, it will probably be found that, although she may not cry in exactly the way the director desired, her particular brand of crying is nevertheless admirable.

It is really a question of compromise. The film director is for ever having to compromise with his players as well as with his technical assistants. Psychology can help him a lot in this

direction, for it enables him to understand the temperament and idiosyncrasies of each individual player under his control, so that he may vary his manner and method to suit his or her special needs.

If, for example, there are many shy beginners amongst the cast, it is a good idea to gather them together on the set and let them relax into some game—a kind of Paul Jones—to get them mutually acquainted and put them at their ease. And then, when it comes to serious acting, give them fairly full instructions about correct carriage, gesture, etc.

If, on the other hand, you are dealing with experienced players, all such preliminary instruction will, of course, be unnecessary, and direction will take more the form of a series of shorthand signs.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.

—Entries, August 31. Rules in the issue of July 25. Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18–September 15.

“All Britain” Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31–September 15. Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

Seventh International Photographic Salon of Japan. —Open (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8–October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6. Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Entries, September 18; open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

“Holiday Happiness” Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson’s Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakov.—Open, August 26–September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakov, Krowoderska, 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

“Northern” Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Rd., Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring “Iris,” Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board’s Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

News & Reviews

Items of General Interest from all Quarters.

The Leipzig Fair authorities announce that visitors to the Autumn Fair, which opens on August 26th, will be granted a reduction of 60 per cent in fares on the German railways, whatever the duration of the journey. This concession will remain valid up to the 8th September. This, in effect, means a great reduction for business men, since, hitherto, the reductions granted have always been contingent upon the trip lasting seven days. With the cost of fares worked out on the registered mark rate it means, altogether, a reduction of 75 per cent compared with normal rates. The reductions also apply to internal journeys to and from Leipzig and other German cities and centres.

The Rhaco accessories, sold in Britain by Sands Hunter & Co. (37, Bedford Street, Strand, W.C.2), include some of the neatest devices now made for photographers—devices which could only have been thought out by photographers who actually use cameras! The Rhaco Combined Lens-hood and Filter-holder is a handier article than its rather long name suggests. Every good f/6 or f/4.5 lens deserves a lens-hood, and generally needs it if the best use is to be made of its powers and its brilliance in out-of-doors work. And very frequently the careful worker, especially the man using “pan.” material, finds that he must use a filter for the best

results. With this device you can clip on to your lens both a filter and a lens-hood at the same time, or use either separately. The filter-holder has a spring clip, and the lens-hood, which is about an inch deep, fits on the end of the filter-holder. If you do not seek to use a filter on any occasion you just slip the screen out and use the lens-hood only. With a two-times or four-times “Rhaco” filter, the outfit, in a neat leather case for the pocket, costs either 15s. (for lenses $\frac{3}{4}$ in. to 1 in. in diameter) or 17s. 6d. (for lenses 1 in. to $1\frac{1}{4}$ in. in diameter).

Messrs. A. W. Gamage, Ltd., wish us to point out that owing to a typographical error, the Coronet Ciné camera advertised in our issue of the 15th August was incorrectly described as being fitted with f/3.5 anastigmat. The correct aperture is f/3.9.

We are not at all surprised to hear that the “Ebner” camera, marketed by Messrs. R. F. Hunter, has won golden opinions already, although it has been available for very few weeks only. Its handsome bakelite body, with no projections, has such a sleek appearance that there arises an irresistible desire to slip it comfortably into a pocket; a glance at the “works” arouses a still stronger desire to get to work with it at once. It is made in one size only—the very popular $3\frac{1}{4} \times 2\frac{1}{4}$, and weighs only 21 oz. With a choice of three excellent f/4.5 anastigmats in the latest Compur shutter, and prices round about £10, there are few cameras that can rival it for originality, efficiency and sound value.

We are asked by the Westminster Photographic Exchange, Ltd., to draw attention to two errors in their advertisement in our issue of August 15th. The new Agfa developing tank was incorrectly priced at 30s. instead of 32s., and they supplied the wrong illustration of the zoo-B Pathéscope projector.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Hypo-Alum Bath.

Will you oblige me with a reliable recipe for a hypo-alum bath for toning bromide prints?
J. A. K. (Norbury.)

Dissolve the following, consecutively as named, in about 40 oz. of very hot water.

| | |
|-------------------|-------|
| Hypo | 5 oz. |
| Loaf sugar | 1 oz. |
| Potash alum | 1 oz. |

This should be kept a day or two before use, after putting into it a few odd pieces of bromide paper.

Safety of Blotting-Paper.

Shall I be safe in leaving prints to dry between the leaves of a book of blotting-paper?
R. M. (Arundel.)

Such a course is very risky, and in other ways unsatisfactory. Commercial blotting-paper should not be used even for surface-drying prints; a suitable form is supplied by photographic dealers. Damp prints should be freely exposed to the air so that they dry in a reasonably short time.

Backing.

Is it possible to make up a backing at home and apply it to plates in the dark-room? A. D. (Alloa.)

It is quite possible, and a reference book such as the "Dictionary of Photography" will give you particulars for compounding the mixtures, of which there is considerable variety. Our own opinion is that, especially with modern plates, it is better to buy them as backed by the makers. The extra cost is trifling, and all trouble and risk are avoided.

Farmer's Reducer.

Will you please give me a hint or two on preparing and using the Howard Farmer reducer?
F. N. (Hampstead.)

In 20 oz. of water dissolve 1 oz. potassium ferricyanide and 2 oz. common (not prepared) salt. Keep this stock

solution in an opaque bottle. Put the negative for ten minutes in plain hypo, 1 oz. to 20 oz. water. Pour off the hypo and add to it enough ferricyanide solution to make it a lemon yellow colour. Apply this to the negative till reduction is nearly sufficient; then rinse rapidly and proceed to wash thoroughly.

Soft Developer.

What is a good soft-working developer for subjects with excessive contrast? W. L. G. (Bradford.)

The following brings up the image rapidly, and time must be allowed to secure the necessary strength.

| | |
|------------------------------|---------|
| A. Metol | 75 grs. |
| Sodium sulphite | 1½ oz. |
| Water to | 15 oz. |
| B. Potassium carbonate | 1½ oz. |
| Water to | 5 oz. |

A suitable working solution is A, 3 parts; B, 1 part.

Getting Definition.

Is it better to use a small stop and a short exposure, or a large stop and a shorter exposure to get plenty of definition when taking photographs under dark trees? H. J. (Nuneaton.)

Your question is not at all clear. The definition will be affected by the stop you use in the lens, and not by the exposure. If you have to stop down to get the necessary definition, then you must increase the exposure accordingly in order to get proper tone and detail. The exposure, even with a large stop, may have to be a comparatively long one.

Spoilt Films.

Can you tell me whether the films herewith were over-exposed, fogged in the dark-room or over-developed? G. A. S. (Norwich.)

We cannot say anything about the exposure of the film in the camera, inasmuch as the whole surface has been exposed to light which has produced all

over it the maximum density a film will give. You will notice that even the edges, which should be clear, are as dark as the rest, except the one that was protected by the paper tab. It is very evident that the film has not been treated in the way necessary for panchromatic or ultra-rapid material.

Damaged Films.

I tend to damage roll films during washing. Is it advisable to harden them? A. H. S. (Woodford.)

We do not see why, with careful handling, films should be damaged during washing, and the fact that you have this trouble seems to indicate something wrong with your methods. If you run the films for a couple of minutes or so through 10 per cent formalin this will harden the gelatine, but the films will still require careful handling.

Squeegeeing.

I enclose some prints which are my first attempts at glazing. Can you tell me the reason for the small irregular spots on the surface?
W. A. W.

The trouble with your prints is due to not excluding all the air when the print is squeegeed. You should have plenty of water between the print and the slab, and squeegee firmly with a flat squeegee so as to exclude all the water and the contained air. This is more difficult to do with such a thick paper as the one you are using. The prints you send can be put right by thorough resoaking, and then treating in the manner described.

Test for Hypo.

Is there a simple test for the presence of hypo? I read that it is possible to eliminate hypo in three minutes with permanganate solution. Would not the fact that permanganate colouring dissolves in the presence of hypo constitute a reliable test? J. D. L. K. (London.)

A common test for the presence of hypo is to allow a few drops of water from the negative to fall into a test tube of water faintly coloured with permanganate. When the pinky colour remains unaltered, it may be assumed that hypo is no longer present. It would take too long to discuss the question of hypo elimination, but you may draw your own conclusions from the fact that we always recommend the removal of hypo by properly regulated washing.

Fixing Film Negatives.

After development I cut up my spool of film and fix the negatives in a dish. Could you tell me whether I can obtain metal separators, with perforated zinc bottoms, to keep the films apart? B. S. C. (Pontypool.)

We do not know of any such apparatus as you suggest, and if you use acid hypo you would probably have trouble with any metal partitions you might construct or buy. We do not see why you should not place your films singly on the bottom of the dish without any frames to keep them in position. It does not matter even if they overlap, provided you move them about from time to time as you would, say, in toning prints.

The AMATEUR'S EMPORIUM

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE —
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

31×2½ Icarette Roll Film, Dominar f/4.5, in Compur shutter, rising front, brilliant and direct-vision finders, ×3 screen, leather case, £4.—Medico, Dunrowan, Attleborough, Norfolk. [3236]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 213, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

31×2½ Zeiss Ideal Plate, f/4.5 Zeiss Tessar, Compur shutter, double extension, rise and cross, etc., condition equal to new, 3 slides, F.P.A. and case; cost £17; bargain for cash, £8/15.—Hothersall, 3, Heights Rd., Nelson, Lancs. [3353]

**THIRD
EDITION**

**MOTION
PICTURES**

with the Baby Ciné

**A Handbook on 9.5-mm.
Cinematography**

By
HAROLD B. ABBOTT

This handbook, specially written for
amateur cinematographers, includes
every aspect of the fascinating hobby
of making motion pictures.

In the preparation of this third edition
a thorough revision has been carried
out. Much additional information has
been included, and all important new
apparatus has been brought under
review.

The following Table of Contents
indicates the wide range of the book
and the completeness with which the
subject is covered.

WE ARE THE LEADING LEICA SPECIALISTS

—Every Leica model, lens, enlarger, and accessory in stock—all on easy payments

LEICA MODEL III With F/2 SUMMAR LENS

With automatic focussing, enabling lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement.

£33:13:0

Nine monthly payments of 76 s.

LEICA FOR ALL OCCASIONS

"It may be that you are a hiker,
A driver, a rider, or biker,
But whatever you do,
Take your camera, too,
And I'm certain that you'll like a
Leica."

(From a recent Limerick Contest.)

NEW LEICAMETER

Better all round and more versatile than any previous model. It possesses the additional advantage of making indoor recordings. Built on the photonic light-cell principle. No batteries. Model 617-2.

£10 Nine monthly payments of 23/4

EASY TERMS AND EXCHANGES

Anything on 9 equal monthly payments. First payment secures goods. Good allowance on your used camera in part exchange.

DON'T MISS THOSE LOVELY "AGAINST-THE-LIGHT" PICTURES

THE ZODEL COLLAPSIBLE LENS HOOD

(patent applied for) allows you to take pictures almost directly into the sun—combining portability with light weight and the greatest possible measure of protection. The Zodel hood has three sliding sections so designed that they cannot chafe and wear away the dead-black lining which ensures absence of reflection. An adjustable rectangular mask at the front ensures that the cone of light entering the camera is of such shape that internal bellows reflections are almost non-existent, resulting in greatly increased brilliancy of negatives, while the adjustable sunshade-flap can be actually set to cast a shadow over the inside of the hood for really exacting work.

Use a Zodel hood always. It measures less than an inch in thickness (closed) and will go easily into your camera case. Push-in filter-holders to carry standard 1 1/4 or 1 1/2 in. circular glass filters are available. Size A, to suit lenses 1 to 1 1/4 in. diameter. **7s. 6d.** Size B, to suit lenses 1 1/4 to 1 1/2 in. diameter. **7s. 6d.** Filter Ring, Size A, for 1 1/4 in. glass filter. **2s. 0d.** Filter Ring, Size B, for 1 1/2 in. glass filter. **2s. 0d.**

All-metal 3 1/2 x 2 1/2 ZODEL DE LUXE THE CAMERA FOR FINE SERVICE.

With f/4.5 anastigmat lens. Delayed-action Compur shutter, rising and cross front, double extension. Very small. Metal body.

£6:17:6

Nine monthly payments of 16 s.

'DEKKO' CINÉ CAMERA

For 9.5-mm. Films.

The small ciné with unlimited possibilities. Has three speeds—half, normal and slow-motion. Can also be used for snaps, time exposures and portraits. With Dallmeyer fixed-focus 30-mm. f/3.5 lens. **£6:6:0**

Nine monthly payments of 14 s.

No. 2391.

A Rolleiflex Picture

How will it enlarge? A critical question, for an enlargement is the final test of a good photograph. With the all-automatic Rolleiflex you just *can't* help making good pictures—for the full-size picture, right way up, is shown on the focussing screen, the magnifier guarantees hair-sharp focus instantly, and parallax compensation guarantees that your picture won't be spoilt by heads being chopped off, or vital parts of the composition missing.

A MINIATURE CAMERA of the LATEST PATTERN
DIRECT FROM THE FACTORY—45% REDUCTION
THE VOIGTLANDER PERKEO OFF LIST PRICE

for 16 pictures on vest-pocket roll film. Fitted with Skopar anastigmat f/3.5 lens in Compur shutter, speeded 1 to 1/300th sec., and T. and B. This cleverly designed and very modern camera is an instrument of great precision. New type focusing knob can be set whilst the camera is closed. One press and instantly the Perkeo springs open to the ready position. The focusing knob is so placed that turning the camera round to alter the focus is avoided.

Every detail has been given careful consideration in design and manufacture. The name Voigtlander has always been a byword in the trade for the highest class and finish.

The Perkeo is real pocket size 41 x 31 x 11 over all. Weighs only 13 oz. Ideal for sports, holidays, travel, fishing. Including plated leather sling, depth of focus table, exposure calculator and cable release, and maker's full guarantee.

LIST PRICE £10 : 5 : 0 OUR PRICE £5 : 12 : 9 13/2 down and 8 more equal monthly payments.

Zeiss Tessar f/3.8 lens

£22 : 10 : 0

Nine monthly payments of 52/6.

SUPER NETTEL

The illustration shows the path of the rays through the distance meter, also note the convenient position of the shutter release.

AN IMPORTANT NEW ZEISS IKON MODEL

The success of the Contax and the rapid development of miniature photography has encouraged us to place on the market the

SUPER NETTEL

The Super Nettel takes $1\frac{3}{8} \times 15/16$ in. pictures (24×36 mm.) on ciné perforated film. Contax spools are used. Automatic focussing by distance meter is supplied as an integral part of the instrument, and the metal focal-plane shutter gives exposures from $1/5$ th to a guaranteed $1/1,000$ th second. The camera body is closed by a hinged baseboard, thus forming a protection to the lens and bellows when the camera is not in use. Either the Zeiss Tessar f/3.5 or the Tessar f/2.8 can be fitted. The Super Nettel is so conveniently operated that one can, without removing it from the sighting point, "wind-snap" "wind-snap" and thus take pictures at intervals as short as one second.

Super Nettel with Zeiss Tessar f/3.5 £21 12 6

Super Nettel with Zeiss Tessar f/2.8 £23 10 0

In miniature cameras the Super Nettel has only one superior, and that is the Zeiss Ikon Contax.

Illustrated 8-page folder giving full particulars, post free on application.

VOL. LXXVIII. No. 2391.

AT the moment of going to press, we understand from the Royal Photographic Society and the London Salon of Photography that two remarkably fine shows will again be presented this year. The entries for both exhibitions have been more than usual, and the quality of the work on the whole appears to be higher. Both the London Salon and the Royal Photographic Society open their doors to the public on Saturday next, September 8th. Our readers should endeavour to visit both these big exhibitions while they are open in London during the month. The Royal Photographic Society's Exhibition is held at 35, Russell Square, W.C.1, and the London Salon is at the Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, S.W.1, near Trafalgar Square.

Listening-in.

Looking round the recent Radio Exhibition at Olympia, we noted how photography—or drawing based upon it—has been used to advertise the radio, chiefly by the pictures of people enjoying the broadcast. Pictures of the neighbours of some of those who have wireless sets were not given. From the many examples we learn that the correct pose to express listening-in is for the sitter to have the head at an angle, while the eyes are turned in the opposite direction to the inclination of the head. These inclinations are very important for giving the far-away look. Of course, if something very emphatic is needed—but only then—the hand, with one finger extended, may be a useful adjunct. Yet surely these poses imply listening to something faint or far-off, whereas the great booming claim of present-day radio is that it gives

you an ear-full. Like the lady witness in *Bardell v. Pickwick*, one does not listen, but the sounds force themselves upon the ear. The strained expression in listening hardly befits present-day radio.

The Telephone and Photography.

The telephone which the Postmaster-General is trying hard to popularise in this country has still a long way to go to reach its density in the United States, where there is one telephone to every six of the population. This popularity in America has been largely brought about by photography. Those who have been concerned to advertise the telephone have used the camera lavishly. In almost every issue of almost every American periodical one finds photographic illustrations of the use of the telephone—a repetition of six heads of the same person, with the caption, "The multiplication of you"; a jovial man speaking into the 'phone, "It is good to hear your voice"; a view of the telephone girl at her switchboard, weaving the speech of the world; a telephone held in the hand, "Where to, please?"; a sleeping lady, with the telephone by her bedside, "Sentinel of the night"; one of those domestic interiors the Americans love so much, with the child talking on the 'phone while mother and father smilingly look on; or a woman listening at the instrument, "Lines to a lady"; or a crowd of people around a telephone, "If there were only one telephone in your town." A great multiplicity of ideas, all worked out in photography, but they get there.

"Showings."

When passing the headquarters of the Y.W.C.A. we noticed a bill

outside advertising the activities of the film society attached to that body. The poster said that every Saturday afternoon there were "Showings," to which gentlemen friends were invited. Trust the ladies to get the right word. How much better to have the good old Anglo-Saxon "Showings" than the Latin "Projections" or "Exhibitions." Moreover, even in the sense in which it is now used (although there were no films in those days) the word is of ancient lineage. Five hundred years ago we read, in the words of a contemporary writer, that "The Mayor and aldermen make many diverse showings and sights," and again, in a religious book of the period, "Miraculous tokens and

showings." How miraculous would even the amateur showings of the Y.W.C.A. of to-day appear to those ancestors.

"T." and "I."—Caution.

The giving of what is believed to be a snapshot exposure when the lever on a shutter is set at "time" is not an uncommon cause of failure, the defect being brought about by giving a "time" exposure and omitting to move the lever to "inst." for an instantaneous exposure. A correspondent informs us that he was unfortunate in getting a few failures at the recent Cowes regatta; the failures were in the shape of fogged and blackened (over-exposed) sections of film, defects

which were puzzling as he has never made a time exposure. He had had a few failures in the form of clean or nearly clean (under-exposed) sections, but obvious over-exposed and blackened films were new to him. Frequent examination of his camera after these mysterious defects revealed the fact that very often the lever was found to be at "time," although he had not placed it there. How was the lever moved? After much thought and a few experiments the mystery was solved. The camera fitted its case very tightly, and when placing the camera in the case, or when taking it from the case, the "T." and "I." lever touched the edge or side of the canvas. *Verb. sap.*

"The Amateur Photographer" EXPOSURE TABLE—September

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m. double these exposures. From 6 to 8 a.m. or from 4 to 6 p.m., treble them. From 5 to 6 a.m. or 6 to 8 p.m., about four times these exposures will be required.

N.B.—The times given above are by "sun time." The exposures, therefore, which are laid down as suitable for 2 to 4 p.m., for instance, will be those to be given between 3 and 5 p.m., by the clock, during "summer time."

| SUBJECT. | Ordinary. | Medium. | Rapid. | Extra Rapid. | Ultra Rapid. |
|---|-----------|-----------|-----------|--------------|--------------|
| Open seascapes and cloud studies | 1/25 sec. | 1/40 sec. | 1/75 sec. | 1/100 sec. | 1/120 sec. |
| Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes .. | 1/15 " | 1/25 " | 1/45 " | 1/60 " | 1/75 " |
| Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes | 1/8 " | 1/12 " | 1/25 " | 1/30 " | 1/40 " |
| Landscapes in fog or mist, or with strong foreground, well-lighted street scenes .. | 1/5 " | 1/10 " | 1/20 " | 1/25 " | 1/30 " |
| Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage | 1/3 " | 1/4 " | 1/8 " | 1/12 " | 1/15 " |
| Portraits or groups taken out of doors, not too much shut in by buildings | 1 1/2 " | 1 " | 2/3 " | 1/3 " | 1/4 " |
| Portraits in well-lighted room, light surroundings, big window, white reflector .. | 5 secs. | 4 secs. | 2 secs. | 1 1/2 " | 1 " |

As a further guide we append a list of some of the best known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hyper-sensitive panchromatic plates and films require less exposure than the ultra-rapid.

| Ultra Rapid. | | Golden Iso-Zenith. | | IMPERIAL, Eclipse Pan. Soft. | | BARNET, S.R. Pan. | | Rapid. | |

Ensuring Quality in BROMIDE PRINTS

Although modern bromide papers are very fine products, and simple to manipulate, many prints produced are lacking in quality. In the following article some unsuspected causes are dealt with.

IN these days of small cameras and efficient enlarging apparatus, the vast majority of photographs are produced upon bromide papers, to say nothing of those processes like bromoil or Carbro, which have their beginnings in bromide prints.

The last few years have witnessed a great improvement in bromide papers, and in the modern products of the best manufacturers the photographer has a printing medium of a quality undreamed-of not so very long ago. The range of contrast is sufficient for the needs of the most varied collection of negatives, and it must be a very bad specimen that will not yield a passable print, provided that the right grade of paper is selected.

Negative and Paper.

The first point is the selection of a paper which suits the contrasts of the negative. This is not a difficult matter after a little experience with the products of one manufacturer. The papers by different makers vary to some extent, and the terms normal, soft or contrasty are relative, and the papers by different makers are not comparable in this respect. The contrast range of the paper should be such that, with proper exposure and development, the gradations of the print from a good negative should range from a suggestion of tone in the highest lights, while detail is seen in the deepest shadow.

Exposure and Latitude.

It is the practice of many manufacturers to claim that their papers offer considerable latitude in exposure. This is a very desirable quality, rightly employed, but the beginner must not imagine that accuracy of exposure is not a matter of any importance.

Correct exposure is the first essential in the production of a perfect bromide print, and it is easily assured. All that is necessary is to give a strip of paper cut from a sheet various exposures of, say, five, ten, fifteen and twenty seconds' exposure, by covering a portion of the negative at the expiration of each successive five seconds. The strip is developed and fixed, and examination will show which part of the negative received correct exposure. The test takes but a very short time, and will ensure a perfect print or enlargement, then or at any future time, if the conditions are noted down and repeated with exactitude.

Developers and Development.

The "best" developer for any bromide paper is that recommended by the maker. Different papers have peculiarities in the emulsion, and although a developer may work well, and produce a bright print free from fog, it may be that the best possible result can only be secured by the use of the maker's own formula. Some makers recommend a larger proportion of bromide than others.

It will generally be found, however, that the best all-round developer for good blacks on bromide paper is amidol.

A typical formula for amidol is as follows:—

Sodium sulphite (crys.) 1 oz.

Potassium bromide .. 10 grs.

Water 1 pint

When dissolved add amidol, 50 grs. This developer will not keep in good condition for more than two or three days; but when freshly made can be recommended for practically every brand of bromide paper.

Whatever developer is used, it is very important that the operation is carried to finality. This means a correctly exposed print. If the

print is over-exposed and removed quickly from the developer in the hope of saving it, the colour will be of a rusty black or grey. The development of a correctly exposed print will be slow; the image gradually gains in strength, until it reaches a point when the print is of the correct depth, and the image appears to go no farther.

The result, provided that the paper is suited to the negative, will be a print of good colour, with rich shadow and pure high-lights. The most common fault in amateur bromide prints is too short a development, following over-exposure. Full development is most necessary if the print is to be sulphide-toned.

A point that should receive attention is the temperature of the developer. This should not be lower than 60° Fahr., especially if the formula contains hydroquinone. The latter becomes inactive at low temperatures, and the balance of the developer is upset. This point is of special importance in cold weather.

Safe Light for Bromides.

It is customary to regard any dark-room light as suitable for bromide papers, but it is well not to take too much for granted. The more rapid grades are easily fogged by injudicious exposure to yellow light. To test the light it is a good plan to place a sheet of paper between the leaves of a book so that half is exposed for five or six minutes to the light in the normal working position. The paper is developed for the normal time, and if the dark-room illumination is safe, there should be no difference between the exposed and the covered parts of the paper. If such appears, some revision of practice or alteration of the light source is called for. When enlarging, the paper must be protected from stray light from the enlarger.

CIRCUS PICTURES

By H. C. BUCKLE.

WHEN the circus comes to town, who is there amongst us, old or young, who does not feel a thrill, either of things to come or of past memories? The sleek well-groomed horses, the tiny ponies, huge elephants, perhaps a lion or two, lithe and supple acrobats, real Indians, and the foolish, painted clown, here are camera subjects galore, interesting

when they were idly waiting their cue to enter the ring.

All this applies to the exterior of the circus; but what about the interior, the ring itself, with performers and audience? This perhaps is not quite so easy, and for this the manager should be approached at a suitable time and candidly asked for permission to photograph. This will undoubtedly mean *carte blanche* being given, except for the ring. When inside, an important point to note is if the "big top" is fairly transparent and admits a sufficient proportion of daylight; for although the arc lamps will be on, even in the afternoon, daylight through the top is a tremendous asset.

A good position is at the top of the gallery, selecting a point between uprights, and against a pole and actually over a stanchion that carries the seats. Here a firm stand will be obtained with a view of the whole of the ring, clear of people's heads. The camera will of course have to be tilted for the high-wire acts, but from the position indicated, the "atmosphere" of the circus will be maintained in the results.

Watch the performance closely with the slide drawn, and it will be found that in all the turns there comes a time where an exposure of 1 sec. or so can be given without fear of movement.

Strength and balance.

It is a good plan to see the show through beforehand, if possible, and note the possible exposure points. Of course, if an $f/2.9$ lens is used with a super-pan. film, an exposure of about $1/10$ th will be possible without a stand; but even then a position back against a firm support will be an advantage.

Finally, when making prints from the negatives, make some for those of the circus staff who have been of any assistance, and for the performers who have posed in any way. This will be greatly appreciated by all concerned, and also will perhaps help a brother photographer in the next town.

Upside down.

to obtain and interesting to everyone afterwards.

As these travelling entertainments are only on the move in the summer, there will be no difficulty in the light and exposure problem, for with almost any camera good pictures will result. There will be many opportunities at the performers' entrance of "the big top," as the main tent is called; for it is here that final touches are given to costumes and animals just before they enter the ring.

It is here, at the stage door as it were, that a cheery and tactful word or two will certainly get a few good photographs, and these people will cheerfully pose if approached when obviously waiting their turn. But keep clear when a rush is on and the show behind time.

The writer has in this way got many pictures and also has been given portions of the actual performances for the benefit of his 9-mm. ciné camera, by clowns, horses, and acrobats, just by simply watching the opportunity

A general view of the ring.

THIS IS THE CAMERA FOR ALL-THE-YEAR-ROUND PHOTOGRAPHY

THE AUTOMATIC Rolleiflex

fills every need of the most ambitious expert. Everything possible is automatic. The focussing hood automatically rises and the magnifier springs into position. The stops and speeds are controlled while camera is in the "ready" position. Automatically accurate—you can obtain the correct focus with lightning speed. A single lever gives tension and release of Compur shutter simultaneously. The brilliant screen picture, seen right way up, even during exposure, tells you when your picture is right—and so avoids wasted film. The film travels automatically from picture to picture, controlled by the counter. These splendid features, together with the allowance for parallax compensation, combine to make Rolleiflex the best of all modern reflex cameras.

Moonlight Photography

By CHRISTOPHER WENLOCK

FOR the amateur photographer there is no more fascinating work than that which we have the audacity to call "moonlight photography." "Audacity" is surely the correct word; for, in spite of the lavish praise and admiration it calls forth, and the readiness with which it is accepted as genuine by the uninitiated, it is not photography of the moon at all.

It, however, conveys so perfectly the impression of moonlight that for all practical purposes it matters little. Some, too, will argue that since moonlight is merely the reflected light of the sun we may just as rightly call sunlight "moonlight" as moonlight "sunlight."

With the slower plates of early years a photograph of the moon was almost impossible outside the observatory owing to the movement of the moon during the necessarily prolonged exposure. Now, however, the rapid emulsion enables us to obtain quite satisfactory pictures of moonlight; but it is simpler and usually

"Moonlight on Lake Vyrnwy."

more convenient to still allow ourselves the harmless illusion and take our moonlight pictures during the day with the aid of the light of the sun.

It occasionally happens that the sun is veiled by a thin haze which reduces the glare sufficiently to allow a direct photograph, and when the sun appears as a dull red ball close to the horizon this is often perfectly safe. It was in this way that the picture entitled "Moonlight on Lake Vyrnwy" was made.

The most effective photographs are those taken when the sun itself is hidden behind a cloud and its light

The Lake.

shines along the surface of the sea or lake. A still surface has the advantage that it gives a clear reflection of the cloud formations; while the ruffled waters of the sea and wind-swept lake have their own charm in the broken light.

This class of work, which does not require any elaborate preparation or skill, is well worthy of careful cultivation. The chief necessity is to seize the opportunity when it occurs. Nature presents us with pictures of exquisite beauty at the most unexpected times, and their duration is usually brief. Once gone they do not come again. There are no duplicates in the art gallery of the skies.

A slow plate or film is preferable to a rapid one, although, with the latter, careful stopping down or a short exposure will answer the same purpose. For such makes as Wellington Anti-Screen, Ilford Auto. Filter, Barnet Rapid, we have found an exposure of 1/100th second at f/16 quite satisfactory; and, of course, when plates are used, backing or the matt emulsion are essential in order to prevent halation.

The Harbour Mouth.

SHEEP *Picture*

itself, which is often done in a confined space, such times offer many opportunities for obtaining pictures of large flocks.

Sheep rarely drink from ponds or

The shepherd.

OCCASIONALLY a picture will present itself to the photographer complete with all the details required to meet the essential composition and much sought-after atmosphere. But more often such favourable conditions are largely the outcome of good management on the part of the photographer.

Few animals offer such opportunities to the pictorial worker as sheep, and when flocks are on the move, suitable places can be found on their route with the sure knowledge that being a comparatively slow-moving subject, it will not take any excess of agility to get ahead again when a further "shot" is required.

Due to the nature of their wool, pleasing highlights can be produced, and the sheep sharply outlined if the photograph is taken against the light. The variety of tonal qualities that can be found in varying lighting conditions offer unusual scope for artistic results.

Generally, some additional or higher point of interest is required to give composition or balance to the picture, and an admirable model is usually provided by the shepherd, who is often of a type complete with dog that will lend interest to the picture.

Each year large flocks are brought to convenient centres for the annual dipping, and although there is little scope to the pictorial worker in the dipping

A high viewpoint.

Sheep on the hillside.

streams, as they find sufficient moisture in the pasture; but during very dry weather, or when driven long distances, individual members of the flock will often draw out and drink from any water that may be available, and such moments are an invaluable aid to the picture-maker.

With modern transport, it is not usual to see large flocks being driven to market, but in rural districts during sheep fairs, or market days,

as an aid to -making

By BERNARD ALFIERI, Jun.

small flocks of sheep can be found on the road, and if certain places have been previously selected it is not difficult to take advantage of them as settings for the pictures.

Apart from moving flocks, grazing sheep, or sheep resting in the shade during hot weather, lend themselves to pictorial work, but care must be taken in approaching them, as if one member of the flock decides to move, all the others will follow.

For this reason the photographer may sometimes find it necessary to

A storm approaching.

Changing pasture.

make a big detour so as not to disturb one isolated sheep lying in the way, rather than take the chance of allowing it to wander into the midst of the others and cause a general movement.

As a rule, sheep will take little notice of the photographer providing no rapid or sudden movement is made, and it is possible to approach within a few yards of the subject if time is taken in the process; but once having disturbed them, it is a hopeless task to try and drive them back again to the position that they previously occupied. If such a thing is desired, the best way is to approach very slowly from the opposite side, and as soon as a movement in the right direction commences, leave them for some time to settle down before a further attempt is made.

Practically any ordinary hand camera will serve for this subject. It should, however, be one that is easily carried and can be used promptly when the occasion

arises. In view of the open character of the subject in most cases, a filter may be employed, particularly if fast panchromatic material is used, and on sunny days a comparatively rapid shutter exposure can be given in these conditions. If a filter is not used a smaller stop should be employed.

It is desirable, however, that panchromatic material, either roll films, packs or plates, should be used whatever the type of hand camera, as in many cases the beauty of the picture will depend on the environment, particularly when a sky with clouds is included. On stormy days some very attractive tone conditions often arise which can be turned to admirable account for picture-making, with the sheep as the dominant point of interest.

In the orchard.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
**LESS ADVANCED
WORKER**

PHOTOGRAPHIC SOCIETIES.

ALTHOUGH I could write quite a large book about photographic societies I am going to do nothing more here than make a few rambling remarks about them.

The print reproduced is from a negative I came across the other day—one that took me well back into the past directly I saw it. The Woodford Photographic Society was the first one I joined, and here are one or two of its members on an outing, with the usual addition of curious and somewhat awed spectators. You will notice that every one of the photographers is using a stand camera. One has a reflex, but that is on a tripod, too, for he has probably got a massive telephoto lens fitted. He is my old friend Ernest Marriage.

Woodford was a small place in those days, but its society had on its membership roll the names of some of the most distinguished photographers of their day. Horsley Hinton was one, but he was one of many. We put up

a good annual exhibition, I can assure you, and our outings were frequent and well attended. We took photography pretty seriously, and therefore enjoyed it; and we had no visions of a coming race of "photographers" who would actually pay some stranger to do their photography for them. Such a race did come along, however, and the Woodford society is now only a memory; and so, alas! is many another jolly, enthusiastic club which flourished when quarter-plates were a shilling a dozen, and when even the newest member knew the difference between a negative and a tripod screw. Which is more than can be said for some modern camera owners.

At the same time there are more photographic societies in this country now than ever before, and new ones are constantly springing up. They work on different lines, but in many cases they are decidedly better lines. I must admit that some of the earlier photographic societies were incredibly

stodgy and dull. They cannot be said to have died, because they never lived. But others, even some of the oldest, were simply bands of good companions to whom photography was the cement of friendship and common interests.

For many long years it was my delight to visit most of the societies in the country—some of them over and over again; and I came to the conclusion that it was in the breasts of my fellow photographers that there beat the warmest hearts in the world. The welcomes I had; the friends I made! I wish I could do it all over again.

Fortunately I still know a good deal about societies. It would be impossible, for example, for me to be unaware of the South Suburban. The annual address of its President is the sort of thing that no old-fashioned society could possibly have dreamed; to say nothing of its bank balance, which would have been regarded as fabulous. It holds its exhibition twice over, in big Town Halls, and Mayors come to open it. I have known some society exhibitions opened by the secretary.

Another society I have in mind is a new acquaintance, and could not be anything else, inasmuch as it is very much in its infancy—a baby in arms compared with the veteran South Suburban. This is the Camberwell Society, and I wish to say something about it, because, although it has been very much misunderstood, I consider it is working on lines that might well be adopted by many other societies, old and young.

I will not mention names, but the extraordinary beginning of things was the fact that a professional photographer told one of his best D. & P. customers that he would never make any progress till he learnt to do his own work. This led to friendly instruction in the dark-room. A few others gathered round, one or two of them workers of outstanding ability.

A small society was organised, and each novice was handed over to a

An old-time photographic outing.

capable coach, who took him in hand and gave him a thorough grounding in choice of subject, exposure, negative making, and enlarging. When the Society announced that it could accept no more members at present there was derisive laughter in certain quarters; but the simple explanation was that the Society would not admit more members than it could train and accommodate.

Further, the Society entered into mutual agreements with other societies, mostly in the southern counties, to support each other's exhibitions with the very best work they could produce. And, as I said, I think that this young Club is setting a good and wise example.

Now, the point I wish to make is this: Scattered over the country

are scores of photographic societies, thickly clustered in some areas, few and wide apart in others. With very rare exceptions, each one is worth joining by any enthusiastic photographer. Most of them have special arrangements for helping the beginner with advice, instruction and practical demonstrations. They all have members whom it would be a pleasure and a help to get in touch with. And yet there are large numbers of beginners who have not taken steps to benefit by all the advantages offered.

It is significant that so many of the contributors to the long series of articles, "How I make my Exhibition Pictures," have expressed their indebtedness to the societies to which they belong. I know most of these contributors, and I know that the

vast majority of them belong to one or more societies and postal clubs. Otherwise they would not be what they are and where they are in the photographic world.

So what about you?

This is the time of year when most societies are arranging their programmes for a new session. If you are unattached, get attached before the fun starts. If you do not know of the societies available for you, write to "The A.P." for the information. There may be one close to you; but if you had to travel a trifle of ten miles or so to get to the meetings it would be worth while. I have done it myself, and still do it. So "stand not upon the order of your going, but go at once." That is Shakespeare—and sense.

W. L. F. W.

Long-Distance Photography

By D. N. BOOTHROYD.

SOME interesting experiments can be carried out in the taking of long-distance photographs by combining the camera with a pair

of field-glasses. The illustrations give some idea of the possibilities.

The photograph in the circle was taken from the same place and at the same time as the more general view, and the aeroplane, which is a very small detail in the picture, is enlarged to the full size of the negative when taken through binoculars.

A twin-lens reflex camera is a great asset when taking photographs of this kind. A simple stand is made from three-ply wood to hold the glasses, so that the taking lens of the camera is on a level with the eyepiece, and a movable block is then fitted to raise the glasses to the level of the viewing lens. It is a help to have two projecting pins in the upper block which fit into holes in the lower block to prevent unwanted movement.

The glasses are first focussed on the object to be taken, and then put into place on the higher block. The camera is then focussed till the object appears sharp on the screen; this will be when the scale is at its nearest point, i.e., farthest from the infinity mark.

The focussing screen will be much darker than usual, as the effective aperture of the field-glasses is about $f/16$. This, of course, will vary with different makes. The glasses are then removed, and after taking off the loose block, are replaced so as to be opposite the taking lens, without changing their direction of pointing.

This method is very useful when photographing such things as distant mountains, where a short-focus lens would make a good picture impos-

sible, or when it is necessary to take some building or person from a distance out of range of the unaided camera.

How I make my EXHIBITION PICTURES

No.
CCXLV.

—
Mr. C. L.
CLARKE.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"DURING my lecturing all over the country, to audiences which include thousands of school-children, my usual text is, 'Cameras possess neither intelligence nor sense of beauty—that is where *you* come in!' My own exhibition pictures are the result of practising what I preach; for, after all, the camera is servant and I am master. This is of course how it should be.

"This personal control of selection and treatment of subject is full of fascination and fun. Take, for example, the case of the picture opposite. It was November 5th—I had a fire-work accompaniment to my lecture that night—and not a solitary soul, not even a stray seagull, was on the shore with me to share the beauty of that autumnal sunset. Without moving fifty yards I made six exposures, all of quite different pictorial appeal. The negatives were on Kodak film pack, and were given exposures of $1/25$ th of a second at $f/8$. For this and similar subjects I find enlargements on either white or tinted Kodak Royal bromide paper are equally effective.

"Readers of this magazine naturally appreciate the peculiar facility of photography for capturing that kind of beauty which depends not on colour but on light values. Observation, in a single word, sums up the main secret of any exhibition success I have had. It is true that luck and artfulness can help, but, in the main, pictures at good exhibitions are there because they bear definite evidence that the author has taken pains in deciding, first, what to take, and, secondly, how to take it.

"Apply this to the print on this page—a subject taken in a city full of ancient streets and courtyards. When friends see this they sometimes say, 'How lucky!' 'It was not all luck,' I reply; 'I put the alarm clock on.' This picture—on Verichrome film with an exposure of $1/25$ th of a second at $f/6.3$ —was taken when most of my fellow pilgrims were in bed about five minutes' walk away. Further, I waited half an hour for it; but why not? I was on holiday, and more able at that early hour to absorb something of the wonderful atmosphere of the Holy City. When the man and the ass at last appeared I snapped just before they entered the shadow. The result was not due to luck, but to patience and observation. This is more often the case than not.

"Have you noticed the astonishing versatility of our hobby? Look round the walls of your next exhibition and see how competently the camera can deal with utterly different subjects. My two illustrations to these notes are of scenes completely different, yet both attractive.

"I seldom use a tripod nowadays, as fast films and wide-aperture lenses enable instantaneous exposures to be made even with a K2 filter. One most important fact for would-be exhibitors or potential prize-winners to remember all the time is this: make the best possible print you think the negative will give.

"I cannot paint or draw, but I like to travel, and I love to bring back a personal record of the places I visit and the people I meet; or at least some of them. Therefore, although my daily work has a full photographic flavour, I still pack cameras and films when going on holiday; still hopefully submit work for exhibitions, obtaining at the worst the consolation prize of getting more fun from life through photography."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

IT is not without a certain amount of appreciation that No. 1 of the prints reproduced on the opposite page—"Old Church Door," by C. C. Cooper—is contemplated, though the original print, with its warm tone on a cream base, is finer, particularly in the way it conveys an impression of sunshine. Nevertheless, something of its quality can be gathered from the reproduction, and perhaps, if the difference can be visualised, its richness and vitality can be imagined.

Quality in the Print.

To some extent, print quality depends upon the suitability of the printing paper for the negative, for it is obviously impossible to obtain a good print from a negative that is either too great in its contrasts, or too little for the range which the paper is capable of recording. Taking this suitability for granted, however, superfine quality in the print also requires a high degree of craftsmanship not only in the adjustment of the exposure to the degree of development, but also in the operations of fixing, washing, drying and mounting.

Practically all development papers need a certain minimum time of development before they are able to give either their full contrast or their finest quality. Certain of these, chlorobromide, for example, require a definite time at a fixed temperature and a constant bromide content in the developing mixture, and, if there be any curtailment of these times, some loss of richness must be inevitable. If, when development proceeds for the proper time, the print is too dark, it is the exposure that must be cut down, and not development.

Fixing must be thorough; washing must proceed for an adequate time, and the print protected from abrasions during the whole of the operations; and drying should be natural and even. All defects should be spotted out, and the print properly mounted in a way that suits both itself and the nature of the subject.

Technical Treatment.

It is important that these details be fully attended to, and the technical treatment that the character of the paper demands be given. Textbooks

are available which discuss the subject in detail, and, in their absence, the instructions accompanying each packet of paper are helpful; but those who happen to be in London during this and the early part of next month, should pay a visit to the exhibitions of the London Salon of Photography at 5a, Pall Mall East, and the Royal Photographic Society at 35, Russell Square, where print quality may be seen at its best.

Experience, and a knowledge of the characteristics of the material in use are, of course, a very useful aid, and in all probability have something to do with the success, in this direction, which No. 1 attains; but, although the effect is good and quite clearly in evidence, the patch of light at the bottom right-hand corner, and the small amount of roof included at the top are compositional drawbacks that might have been avoided by the employment of the rising front.

What the picture needs is a trim of a quarter-inch from the base, and an addition of a similar amount to the top. The upper windows, at present, seem to be too prominent a note to be so near the topmost edge, and the adjustment would furnish a better sense of balance, the weight of tone at the base requiring a greater weight above.

Balance and the Subject.

The disposition of the masses of light and shade must, of course, vary with each individual subject, but, as a general rule, it will be found advisable so to arrange the tone at the corners that it is somewhat deeper than those nearer the centre.

The idea is to suggest, almost imperceptibly, a feeling of enclosure, and while, in a subject like No. 1, the top corners could not be artificially darkened without inviting a suspicion of falsity, a greater proportion of roof along the top would be sufficient to convey the feeling.

No. 2, "Washing the Greens," by Mrs. G. Hall, seems to exemplify the idea, and, to some extent, so does No. 4, "An Essex Inn," by A. C. Boxall. The former, however, suffers from the inclination of the vertical lines—arising from pointing the camera downwards—and the bottom right-hand corner needs darkening. The verticals could, however, be corrected

by printing by projection, but it is rather a pity that the head of the figure is not shown in light. It would tell to far greater effect if it did, and, possibly, by exposing a little sooner or later, such a result might have been secured.

Stability and Strength.

In "An Essex Inn," the subject seems to want a bit more at the base and a little less on top. This is the reverse to the adjustment required in the case of No. 1, and its lack of stability, in comparison with the other, is easily seen.

No. 1 seems stable and strong, and No. 4, if not exactly weak, not so strong as the other, but the suggested revision brings them to just about the same level in this respect. On the other hand, there is a balance, but one of light tone, at the top and bottom of No. 6, "The Loft Ladder," by J. K. Hood, and the loss in stability and strength, in comparison with the other two, is very apparent.

Shadow tone at the base, and assuming that it has a sufficiency of depth, is necessary to afford a sense of stability, and while it happens that what tone there was was not deep enough, the position might be improved by local extra printing. Horizontal shadows are better than those approaching the vertical, or on a decided slant; but, though No. 5, "An Old Porch," by F. S. Norton, suffers somewhat on this account, its stability shows an advantage over that of No. 6, and there is, again, quite a good balancing mass towards the top.

Washy Darks.

The technical quality of the original, however, leaves much to be desired, for the darks are washy and devoid of richness. The negative, perhaps, is somewhat weak in its contrasts for the paper employed, but, taking this into consideration, it is doubtful if the print has been fully developed.

Better technical treatment is required, and, if the darks are still lacking in depth, a more vigorous grade of paper should be substituted. Similar remarks are applicable, again, to No. 3, "Shadows," by G. M. Smith, where, although the subject is well seen, the print is totally lacking in guts.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE SAND ARTIST," by H. W. Lambert.

THERE is a certain similarity in the choice of subject material in this case and that reviewed in our issue for the 22nd of last month, a child on a seashore providing the theme in both instances, with a subsidiary *motif* of an effect of sunshine. It could, perhaps, scarcely be said that either presentation offers a decided advantage over the other, but the method of treatment differs, and if in the former the interest be more concentrated in the figure, the effect, in the present instance, assumes a greater significance, and the long shadow is a feature that enhances its attraction.

Size and Scale.

Possibly the main reason for the relative attractions of the two figures lies in their difference in scale, the size of the child in the former picture being proportionately larger than in this. The contrast of tone, too, is not so great here; but in contradistinction, the figure (1) stands out quite as well from the setting, as its general tone is lighter and that of the surroundings darker.

In each case there is no doubt about the principality of the figure as the centre of interest, and the reasons are the same. The figure contains both the strongest light and the deepest dark; its position is forceful; and, the setting being even in tone and containing nothing else of any importance, human interest ensures its dominance.

The effect of sunshine becomes more prominent, partly because of the inclusion of the long shadow, and partly because of the deeper tone of the setting, against which the light of the figure glows with an appreciably greater brilliance. The impression

arises, in a large measure, from the lower altitude of the sun, which, by emphasising the verticals at the expense of the horizontals, is responsible for the brightness of the light upon the figure, and the darker tone of the surroundings.

Pose and Effect.

It also accounts for the length of the shadow, which, in a way, takes the place of the lobster as a secondary

and richness of tone and modulation are fully in evidence. It is partly on this account, and partly because of the direction in which the light is falling, that the modelling of the limbs is so beautifully recorded. They are very full and round, and the texture of the flesh tones is nicely rendered.

The figure, perhaps, is placed somewhat near the horizontal centre, but while this may impair the strength of her position to a minor degree, it

is possible that any addition might involve the encroachment of an unwanted and undesirable intrusion upon the picture space. If so, the present arrangement had better be retained; but, if not, and the negative permits, it might be as well to add a small amount to the top. Half an inch would be quite enough, and, besides improving the placing, it would also confer a greater sense of spaciousness.

As the print stands, the proximity of the head to the top edge of the

print causes something of a sense of restriction. This is scarcely sufficient to impair the attraction to the picture, but it would be better corrected.

Holiday Efforts.

In all other respects, the result is characteristic of the sort of thing that is possible of achievement during a summer holiday at the seaside.

It so often happens that, on a holiday, one goes in search of the picturesque, and, while what is fresh is undoubtedly stimulating, it is quite likely that the more homely subject, such as this, may be overlooked, although, in the end, it may attain a higher pictorial level than the more ambitious efforts of the former class.

"MENTOR."

accent, and, being contained within the picture space instead of straying outside, seems to confer upon the composition a somewhat greater sense of finish.

As far as the pose is concerned, there is no practical difference, both children being caught in a graceful attitude, and both being free from any suspicion of camera consciousness.

In this instance, both pose and action are particularly good, the absorption of the child in her self-imposed task being wonderfully well caught; so much so that it becomes characteristic of childhood and childish moods. It is very well done, and no less satisfying is the technique, for, while the general tone is soft and harmonious, there is no lack of quality,

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Things that Matter Most in Cinematography

The most satisfactory form of cinematography is that in which expressive factors are interrelated with suitable subject-matter. Further notes on this subject are included below.

AN amateur cinematographer who had recently returned with several reels of summer-cruise pictures was asked by a fellow enthusiast for any tips that might be of assistance during the filming of his own forthcoming holiday.

"Beyond failing to use a filter in a very bright light," he is quoted as saying, "there is no point at which you can go really wrong."

He is also credited with some further remarks on the necessity for giving a correct exposure—but these were partially nullified by references made to the "rich emulsion" with which "you may go grievously wrong in exposure and still get off with hardly an indication of your error."

Well, statements of this kind are frequently being made by club and individual cinematographers. They fail to indicate that cinematography includes factors of far greater importance; hence the serious worker will feel with me that it is necessary to delve a little deeper into those opening words, "Beyond failing to use a filter, there is no point at which you can go really wrong."

Prime Factors.

Obviously, regular readers of this paper will know that exposure is only one factor amongst the many that go to make up photographic technique; and they will further know that the real excellence of any film is not dependent upon photographic technique alone. Time and again, these columns have endeavoured to show that the cinematography is not the mere business of photographing the things we see, but is rather the art of using photography—and other things—to create moods and impressions in the mind of an observer.

And even in the face of poor or mediocre photography, the film itself—based upon these principles—may be entirely successful. In this, I do not suggest that the photographic "quality" should frequently fall short of the high standards made possible by modern technique; but now we

are brought face to face with the point it must in all conscience be recognised that there are times when it is necessary to avoid brilliant photography and to try instead for images which are by no means good photographs, but which—through the moods and impressions they create—are gloriously fine cinematography.

Importance of Subject.

These, however, although prime factors in the executive sense, do not matter most in cinematography. Even higher than these is the subject. Why this is so it is impossible fully to explain at the moment. Let it suffice to say that for the majority of beginners, family, holiday and personal subject-matter must be accounted the most satisfactory.

Amongst intermediate workers, document and interest films may receive

more general approval—whilst advanced workers usually show a preference for abstract, i.e., "phase" treatment and other material creations of cinematic ideology. There is yet another class—in which adherents have only a partial appreciation of cinematography, using it as a convenient method of graphic recording. I refer, of course, to the rapidly dwindling class in which the output is solely of play-films or photo-plays.

The highest possible expression of cinematography is that in which expressive factors are interrelated with suitable subject-matter. This, too, is synonymous with the aims of several ciné societies throughout the country—aims which embrace the new "films-with-a-purpose" technique, perhaps the greatest development since the introduction of amateur cinematography itself. S. E. L. MOIR.

Taking a band on the march. The ciné operator, with apparatus on a special trailer, is following the soldiers at a slightly slower speed.

Filming *En Route*

IT has been said that some of the best aspects of our cathedrals are to be seen from carriage windows of trains approaching them. Tall church spires and similar towering buildings of our towns stand out as landmarks upon their approach by railway.

Filming *en route* gives the cine enthusiast opportunity of recording brief shots of towns passed on his travels, embracing unusual viewpoints. Shots can be secured of towns, villages or stations by filming with the camera placed at a suitable angle through an open carriage window. Whilst in action, the camera can be rested on the top of the open window frame and pointing so as to embrace oncoming subjects without undue vibration. Viaducts being crossed allow for the camera being pointed slightly downward to permit broadside shots of suitable landscape being taken. A length of film of a rival train travelling in the same direction and gradually

overtaking the one in which he is travelling gives a pleasing impression of speed, and should not be missed.

The cinematographer who has a car at his disposal can obtain many unique shots of interesting sights to be met during his journeys. A film showing the gradual approach to a quaint village has only to be seen to be admired, the screened picture giving the impression of the audience themselves being actually transported. Village squares, old inns and numerous oddities of our countryside worthy of recording, present themselves, making a pleasing film, greatly helped by the fact that, being taken from a moderately moving vehicle, there is continuous interest. Even the farmers' boy manoeuvring his awkward cattle along the road ahead may prove a worthy subject.

Filming through the open car windscreen provides opportunity to secure views of oncoming traffic, and if passengers are being carried in the

car, the side windows can be utilised for side shots. If driving solo, a suitable plywood base can be constructed for temporarily affixing the camera to the front windscreen. Providing the camera is motor-driven, little difficulty will be experienced in its manipulation on fairly quiet sectors of the road, although the driving of the car will, of course, take preference over the camera.

Moving launches and punts are useful in securing shots of the numerous phases of river life, whilst town traffic is perhaps best recorded from the top of a bus moving at a moderate speed. Short shots taken *en route* often serve as inserts in any future productions requiring scenes where speed or passing traffic are required to be portrayed.

Always remember to keep the camera lens covered when not in use, and, in between shots, to dust the lens slightly with a suitable camel-hair brush to eliminate dust or grit that may have adhered to it.

The Week's Meetings

Wednesday, September 5th.

Camberwell C.C. Practical Studio Evening.
Hucknall and D.C.C. Nottingham Subjects.
Plymouth I.P.S. Newnham Park.
Rochdale P.S. "Some Prints and How they were Made." G. W. G. Paylor.

Thursday, September 6th.

Bury P.S. Lecture.
Hammersmith H.H.P.S. Discussion on One-Man Show. F. L. Williams.
N. Middlesex P.S. Competitions. Members' Queries.
Nottingham and Notts P.S. Newark.
Oldham P.S. Holiday Chat.

Saturday, September 8th.

Beckenham P.S. Box Hill.
Belfast C.P.A.C.C. Island Magee.
Bradford P.S. Knaresborough.
Bristol P.S. Shirehampton.
Bromley C.C. St. Mary Cray to Crockenhill.
Bury P.S. Liverpool.
Cripplegate P.S. Roydon.
Exeter C.C. Whipton and Poltimore.
Hackney P.S. Inner Circle.
Medway A.P.A. Birling and Ryarsh. 2.30 p.m. Bus to Malling.
Nottingham and Notts P.S. Whatstandwell.
Oldham P.S. Liverpool.
Sheffield and H.P.S. Holmesfield to Dore.
Sheffield P.S. Longshaw.
Small Heath P.S. Wooton Haven.
Southampton C.C. Emery Down.

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Saturday, September 8th (contd.).

Stafford P.S. Abbots Bromley.
Staines P.S. Ramble.
Stockport P.S. Liverpool.
Walthamstow and D.P.S. Zoo. Meet Mappin Terrace, 3 p.m.

Sunday, September 9th.

Harrogate P.S. Guys Cliffe and Ramsgill.
Ilford P.S. Mountnessing and Kelvedon Hatch.
John Ruskin C.C. Eynsford.
Photographic Society of Ireland. Slane and Beauparc.
Twickenham P.S. Burnham Beeches.

Monday, September 10th.

Bournemouth C.C. Lantern Evening.
Southampton C.C. Ciné Display. C. Chandless.
Walthamstow and D.P.S. Finishing the Print. S. Bridgen.

Tuesday, September 11th.

Hackney P.S. "Picture-Making by Photography." S. Bridgen.
Manchester A.P.S. Exhibition of Ramble Pictures.
Twickenham P.S. "Home Portraiture." E. H. Best.

Wednesday, September 12th.

Camberwell C.C. Syllabus Night.
Rochdale P.S. Surprise Items. J. Hargreaves and H. Gidman.
Southampton C.C. Outing to Ashurst.
South Suburban and C.P.S. Ciné Evening. L. C. Boyce and G. H. Dannatt.
Stockport P.S. Competition.

STEREO PHOTOGRAPHY *with* Single Lens Cameras

AT a time when stereo photography is definitely declining (at least, one rarely sees stereo cameras about), a method has been developed which should prove a great attraction, particularly to the users of Leica cameras, as it does not necessitate any expensive accessories. As is well known, there is a stereo attachment available for use with the Leica camera, which gives two images each occupying half the space of the normal Leica negative. As these pictures are already transposed by virtue of the optical construction of the arrangement, one need only enlarge the joint negatives, and, in enlarging, mask them to the proper separation, to obtain a faultless stereogram for viewing in the ordinary stereoscope. A simple way is not to make enlargements but to make a contact diapositive, which is viewed in a special Leica stereoscope in its original size. With this arrangement, any Leica

camera is turned into a stereo camera and snapshots can be taken of moving objects.

The new method does not make use of this accessory to the Leica, nor of the simpler stereo slider which is obtainable also for the Leica, and which is used on a tripod head and allows of taking two photographs at a separation; but it merely consists of taking one photograph resting the body on the one leg, and the other photograph resting it on the other. The difference in viewpoint thus obtained is sufficient to yield a perfect stereoscopic effect, and as with the Leica a direct-vision view-finder is used at eye-level, there is no great risk of a displacement in height, which would be very troublesome. The resulting negatives are contact printed, not enlarged, and the original size prints mounted on a small piece of cardboard and viewed in the Leica "Plastoscope."

News & Reviews

Items of General Interest from all Quarters.

The Leica "Oleyo"—an arrangement for single exposures. This is not, as the name might imply, an attachment to fit into the Leica, but consists of a separate cast body into which one's Leica lenses are screwed, and which is equipped with a novel dark slide to

hold a piece of film sufficiently large for one exposure. This arrangement will be of particular interest to those who experiment with a variety of films and only want to give one or two exposures. A separate Ibsor shutter is used in front of the lenses. Focussing can be done either on a ground-glass screen or by means of a separate range-finder. The price of the "Oleyo" arrangement for single exposures is £4 19s. 6d.

Amateur photographers visiting Germany at the present time should note that very stringent restrictions are now enforced in regard to photography anywhere in the neighbourhood of Nazi camps, fortifications or buildings. In all other respects, however, visitors and amateur photographers are encouraged.

A hooded focussing screen, postcard size, was lost recently by a reader of *The Amateur Photographer* at Lincoln Cathedral. Will anyone finding same kindly communicate with Mr. J. W. O'Keeffe, 96, Harrogate Street, Bradford?

Stolen.—A Model III Chromium-plated Leica, with f/2 Summar lens, No. 192204. £5 reward is offered for the return of this camera, and should same be offered for sale, will the person to whom it is offered notify the police or Mr. F. Griffin, 84, Aldersgate Street, E.C.1?

A new miniature camera has just been introduced to the British market by Messrs. Zeiss Ikon, Ltd., Mortimer House, 37-41, Mortimer Street, W.1. This is called the Super Nettel, and as it is from the firm that makes the Contax miniature camera, can be relied on to be a very fine little instrument. Like the Contax it takes a spool of ciné film, and embodies in its construction most of the points that a high-class miniature camera should possess. It has a focal-plane shutter, accurate distance meter, Tessar lens, detachable back, and folds into a remarkably small space. Altogether it is a camera that the "miniature worker" will be interested in seeing. We hope to have more to say regarding the Super Nettel when we have had an opportunity of testing it.

THE LATE GEORGE E. BROWN

THE death of George E. Brown, on August 23rd, as announced in our last issue, came as a great shock to his many friends and acquaintances in the photographic world.

G. E. B., as he was known to his familiars, was for thirty years editor of our contemporary, "The British Journal of Photography." During the whole of that period he not only conducted the paper with dignity and knowledge, but on no occasion did he make enemies. At the time of his death Mr. Brown was sixty-one years old. He was educated as a chemist, and held the position of analytical chemist to the Great Western Railway Co. at their Swindon Works in 1899. He was later associated with the late Snowden Ward as Associate-Editor of the "Photogram," and became Editor of "The British Journal of Photography" and "The British Journal Almanac" in 1904. He was a fellow of the Institute of Chemistry, an Hon. Fellow of the Royal Photographic Society, and an Officier de l'Académie Française.

THE LATE GEORGE E. BROWN.
Editor "The British Journal of Photography," 1904-1934.

(Photograph by S. W. Shore.)

Mr. Brown had a very extensive knowledge of photographic theory and practice, and had written on both photographic and chemical matters. Under his editorship "The British Journal" has always been a publication of sound practical value to the technician, the professional and the commercial worker.

For many years he was handicapped by rheumatoid arthritis, so that his work was frequently done under the disadvantages of his affliction.

He did much to make "The British Journal Almanac" a reliable and compact volume of information, and his editorial articles were always well chosen and admirably written.

He was a German scholar, and among his other work he had translated a number of technical papers from the German as well as from the French, his most notable achievement being the English edition of L. P. Clerc's standard work, "La Technique Photographique."

Personally he was a man of considerable charm, and possessed a dry wit which, although pointed, was never hurtful.

He leaves a widow and two daughters, to whom we extend our sincere sympathies.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 29. Rules in the issue of August 29.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18-September 15.

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31-September 15. Exhibition Secretary, c/o 18, Ramshill Road, Scarborough, Yorks.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6. Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26-September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowoderska, 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10-15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, October 6. Particulars from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Amidol Developer.

Will you give me the formula for the single-solution amidol developer you published a few years ago?
G. K. (Sheffield.)

We have published many amidol formulae, and do not know to which particular one you refer. If you want it for developing prints, all you need do is to dissolve 2 oz. of crystal sodium sulphite in a pint of water and add 50 to 60 grains of amidol. This developer must be used quite fresh, as it will not keep more than a day or so. The amount named will develop about eighteen whole-plate prints, or even more at a pinch.

"Supernatural" Print.

The enclosed print is supposed to be supernatural, with no trickery, according to a friend of mine. Will you give me your version of it?
W. E. H. (Sowerby.)

There is no reason why anything supernatural should be supposed at all. It is simply a familiar case of double exposure, but without any information as to the circumstances we cannot explain exactly how it came about. It is perfectly easy, however, for any experienced photographer to produce this sort of thing whenever he chooses, although it is more often the result of accident.

Plain Hypo.

I have fixed several films with ordinary instead of acid hypo. The results appear all right, but will it affect the keeping quality? What is the advantage of acid hypo?
R. B. W. (Bradfield.)

A plain hypo bath is just as reliable as an acid one as far as the keeping quality of the negatives is concerned. The advantage of an acid bath, however, is that it keeps cleaner, and therefore does not stain the film. It also generally removes the dyes which are so often incorporated in modern films.

Lamp in Enlarger.

The lamp in my enlarger is six inches from the condenser; is this a suitable distance? The lamp is movable.
F. M. (Clapton.)

There is no fixed distance of the lamp from the condenser, as it varies according to the position of the lens, which depends, in its turn, on the degree of enlargement. When you have finished focussing you should remove the negative and examine the disc of light, and if this disc is not perfectly even you must make it so by moving the lamp backwards or forwards.

Stops in Enlarger.

Apart from altering the exposure, what is the use of stops in an enlarger?
F. L. G. (Barcelona.)

With a condenser enlarger it does not follow that the stops will affect the light as in ordinary photography. If, however, the light is diffused, the stops have a similar effect on the length of exposure to what they have in ordinary photography. Practically the only purpose of using stops at all in an enlarger is to sharpen up the definition at the margins when the lens used is not an anastigmat.

Book on Photography.

Can you recommend a book on photography commencing fairly easy, and covering the scope of a — camera?
R. W. (London.)

A good general handbook on photography is "Photography Made Easy," by R. Child Bayley, obtainable post free from our publishers, price 2s. 3d., but this or any other handbook will naturally contain a great deal of material in which you are not at present interested. No handbook has any more to do with the one particular camera you name than with any other, as the same general principles apply to all. You should have with your camera a booklet supplied by the makers, explaining the manipulation of this particular instrument.

Meter Instructions.

Can you inform me how to use a Justaphot meter?
C. J. K. (Sutton.)

It is difficult to tell you how to use a Justaphot meter in the space of a short reply, as the instructions run to considerable length, and vary with different models. Every meter is accompanied by full instructions when sold. You can obtain them from Messrs. Drem Products, Ltd., of 37, Bedford Street, Strand, W.C.2.

Focussing Scale.

I have used all the markings on my focussing scale, and every aperture down to f/16, but cannot get the distance sharp. What can I do?
L. B. (Sowerby Bridge.)

We do not understand why you have used all the different markings on your scale in an attempt to get the distance sharp. The mark on the scale that comes first as the lens is drawn out should be the mark for distance; and, if when the pointer is set to this mark, the distance is not sharp, there must be something wrong. It may be that the focussing scale is out of position, or it may be due to other reasons which we cannot guess at without examining the camera.

Pyro Developer.

After reading a beginners' article I resolved to try pyro. The negatives are good but there is no trace of yellow stain. Is it working well if it gives no stain?
A. M. F. (Birkenhead.)

It is quite a mistake to suppose that pyro necessarily gives a stain. If sulphite is included in the solution, and this solution is reasonably fresh, the image is practically as good a black as is obtained with M.Q.

Exposures for Fireworks.

What exposure should I give for bursting rockets or shells and fixed set pieces?
F. W. K. (London.)

It is quite impossible to suggest definite exposures for firework subjects. We have published articles on the matter from time to time, but in them it is nearly always pointed out that the effects are obtained by leaving the lens open for some considerable time, so as to let various successive fireworks register themselves on the film. In photographing a set piece a great deal depends upon the colour of the lights, but with many of them it would be quite safe to leave the lens open as long as the display of the particular piece lasted. Panchromatic material is a great help.

Intensification.

I send two negatives, one of which I have intensified with uranium. What is the cause of the atrocious result?
D. R. (Dulwich.)

We cannot say what has gone wrong with the intensified negative, but we should think that you could not have followed the instructions with sufficient care. We have frequently described and recommended the method of chromium intensification, which we prefer to uranium. You will find the matter sufficiently fully described in the beginners' article in the issue of August 22nd. We doubt, however, whether you will be able to do much with negatives as weak as the untreated one you send.

The Amateur's Emporium

Prepaid Advertisements.

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less 1/-
1d. for every additional word.

PROFESSIONAL AND TRADE—

12 words or less 2/6
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed**

Notes being untraceable if lost in transit should not be sent as remittances.

CAMERAS AND LENSES

31×2½ Super Ikonta, month old, absolutely as new, leather case, filters, £13, or exchange for Baby Ikonta (Tessar) and cash; letters only, postcards ignored.—P. J. Eve, 19, Baskerville Rd., S.W.18. [3514]

MAKINA II, 3½×2½, f/2.9 Anticomar lens, F.P.A., roll-holder, 6 dark slides, filter, lens hood, special morocco cases; all new; offers to—Barclay, 68, Queen's Drive, Glasgow, S.2. [3520]

ENSIGN Folding Reflex, 3½×2½, Aldis f/4.5 anastigmat lens, focal-plane shutter; almost new condition, £5, or nearest offer.—Collins, 28, Holmdale Rd., West Chislehurst. [3522]

REFLEX, ½-pl. T.-P. Junior Special, Carl Zeiss Triotar f/4.5 lens, 12 slides, F.P.A., capvas case, £7/10.—Wade, 86, Highfield Lane, Keighley. [3524]

STANDARD Leica, f/3.5 Elmar, 3 chargers, angular view-finder, case, also Vertical Enlarger for same, all excellent condition, £9, complete.—Bilby, Tyr-y-sarn Rd., Rumney, Mon. [3526]

T.-P. Horizontal Reflex 2½×2½, Dallmeyer f/4.5, F.P.A., 6 slides, Dallmeyer 9-in. f/6.5 Telephoto, cases for camera, lens and slides; all perfect condition, £13.—Gray, 3, Rutland Square, Edinburgh. [3529]

ROLLEIFLEX, f/3.8, 2½×2½, automatic, leather case, lens hood, Omburx meter; all perfect; bought £27/12/6; the lot, £18/10.—Box 1403, c/o "The Amateur Photographer." [3531]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

ENSIGN Midget, as new, 22/6; good Box Camera part exchange.—165, Lichfield Rd., Dagenham. [3535]

VOIGTLANDER Brilliant, f/7.7, new, with case, £2.—1, Woodmansterne Rd., Coulsdon. [3540]

F/3.8 Zodel Special (3½×2½), D.A. Compur, 9 slides, roll-film adapter, lens hood, tripod and case; perfect condition, £5.—Conrad, 54, Holmdale Rd., Chislehurst, Kent. [3542]

31×2½ Nagel Roll Film, f/4.5; Horizontal 5-in. **32** Condenser Enlarger, fitted electric; Kodak Film Tank; £6 the outfit.—29, Kinnaird Avenue, W.4. [3546]

CONTESSA Nettel 9×12 cm., Zeiss double Amatar f/6.8, Ibsor shutter, double extension, all movements, F.P.A., 3 slides, case; perfect, £3/3.—129, Spring Grove Crescent, Lampton, Hounslow. [3547]

21×3½ Ensign Roll Film Reflex, Aldis f/4.5, case, good condition, £4/10.—Weinstein, 6, Raleigh Close, London, N.W.4. [3548]

CASH Bargain.—Ensign Speed Film Reflex, Ensar f/4.5, 2 filters, films, £2/10.—Box 1410, c/o "The Amateur Photographer." [3553]

ROTH-MEYER Mentor 4½×6 cm. Reflex, revolving back, double extension, f/1.5 Plasmad, 3 slides, F.P.A., lens hood, release, best hide case; cost £60; best offer over £20; consider exchange.—44, Colyton Rd., Peckham Rye, S.E.22. [3556]

31×2½ Zeiss Ikon Ideal, f/4.5 Dominar, D.A. Compur, 3 slides, F.P.A., leather case, new last year; also Lancaster Amplus No. 2 Electric Enlarger, for use with above camera; the lot, £6/10.—47, Laurence Rd., South Ealing, W.5. [3541]

LEICA Chromium Model III, f/3.5 Elmar, £21; also f/2 Summar, £12; Photoskop Meter, £4; Vidom Universal Finder, £3/5; will sell separately; all as brand new; owner buying cine.—Gibson, 66, Algonson Rd., Lewisham, S.E.13. [3534]

T.-P. 3½×2½ Special Ruby Reflex, Cooke f/3.5, in sunk and reversible lens box, 3 double plate-holders, F.P.A., velvet-lined leather case, Alpha and Delta filters; perfect condition, £13.—Sutton, 84, Sandbourne Avenue, S.W.19. [3560]

LEICA II, Elmar f/3.5, No. 1 filter, in purse, antinous release, spool chamber, leather case; excellent condition, £17.—Jarvis, 65, Onslow Square, S.W.7. [3561]

LEICA Model I, complete with range-finder, f/3.5 lens, very little used, £7.—Faulkner, 13, Rudall Crescent, Hampstead, London, N.W.3. Deposit system. [3562]

31×2½ T.-P. Duplex Reflex, Ross f/4.5 Xpres, 3 D.D. slides, F.P.A., magnifiers, leather case, cost nearly £50; reasonable offer.—Mount, 3, Ellenborough Crescent, Weston-super-Mare. [3568]

31×3½ Ensign Speed Film Reflex, Aldis Uno f/4.5, filter, leather case; as new; offers.—Below. [3569]

PRESS Photography Competition.
 EACH month during 1934, the Co-operative Wholesale Society will offer a Prize of Two Guineas and Three Prizes of One Guinea each, for the best photographs submitted during each month, by competent photographers, dealing with the activities of the C.W.S. In addition to the prizes payment will be made for all photographs published. Particulars of the competition can be obtained from—The General Editor, C.W.S. Publicity Department, Balloon St., Manchester. [9800]
 "DOGGY" Photographs wanted.—A few good photographs required; not dog portraits, but pictures illustrating incidents of "doggy ways," 7s. 6d. for each accepted.—Submit prints to Editor, "Austin Magazine," Imperial House, Cheltenham, stating on back breed of dog depicted and name and address of sender. [3545]
 AGENCY for Amateurs, West Country and Overseas photographs required.—V. Chamberlain, 117, Lower Oldfield Park, Bath. [3551]

GAMAGES HAVE THE NEW WONDER CAMERAS IN STOCK!

LATEST ZEISS IKON "SUPER NETTEL"

FOR 36 EXPOSURES ON STANDARD CINÉ FILM.

Fitted f/3.5 Zeiss Tessar, coupled to range-finder for dead accurate focussing. Latest type metal focal-plane shutter, with possible exposures from 1/50th to 1/1,000th sec. Remarkably small and, of course, beautifully made throughout.

£21:12:6

★ Gamages definitely make the highest allowance for Cameras, Binoculars, Telescopes, Projectors, etc., etc., in part exchange for other apparatus. Easiest of Easy Payments, too.

LATEST "DEKKO" CINÉ CAMERA Amazing Value for money.

The model we recommend is fitted with f/2.5 Taylor-Hobson anastigmat and finest clockwork motor adjustable for 3 speeds, including real slow motion. The starting can be set for short shots or continuous running for self-portraits. Also single pictures for time-lapse only.

£7:17:6

and we will make the definitely highest allowance on your out-of-date apparatus in exchange.

EASY PAYMENTS

Why not buy this easy way? We allow you to purchase any article on nine equal monthly instalments. First payment secures goods. Only 5 per cent added, or 5/- if under £5. No harsh formalities.

For Bright 'DULL DAY' SNAPS

LEICA MODEL III WITH F/2 SUMMAR LENS

With automatic focussing, enabling lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement.

Nine monthly payments of 78 6. **£33:13:0**
WE ARE THE LEICA SPECIALISTS.

THE NEW LEICA FOCOMAT ENLARGER

With automatic focussing. With effortless speed this enlarger will give perfect pictures from your Leica negatives whether you want enlargements to the size of 3½ x 2½ in. or up to 12 x 10 in. The diffused illumination gives soft, harmonious enlargements and eliminates any possible scratches on the negative. Pre-eminently suitable for the enlargement of miniature negatives. For use with Leica camera lens.

£13:19:0

Nine monthly payments of 32 7.

FOR THOSE ATTRACTIVE "AGAINST - THE - LIGHT" PICTURES THE ZODEL COLLAPSIBLE LENS HOOD

(patent applied for) allows you to take pictures almost directly into the sun, combining portability with light weight and the greatest possible measure of protection. The Zodel hood has three sliding sections so designed that they cannot chafe and wear away the dead-black lining which ensures absence of reflection. An adjustable rectangular mask at the front ensures that the cone of light

entering the camera is of such shape that internal bellows reflections are almost non-existent, resulting in greatly increased brilliance of negatives, while the adjustable sunshade-flap can be actually set to cast a shadow over the inside of the hood for really exacting work.

Use a Zodel hood always. It measures less than an inch in thickness (closed) and will go easily into your camera case. Push-in filter holders to carry standard 1½ or 1¼ in. circular glass filters are available.

Size A, to suit lenses 1 to 1½ in. diameter.....7s. 6d.
Size B, to suit lenses 1½ to 1¾ in. diameter.....7s. 6d.
Filter Ring, Size A, for 1½-in. glass filter.....2s. 0d.
Filter Ring, Size B, for 1¼-in. glass filter.....2s. 0d.

CONTAX

MINIATURE CAMERA
PERFECTION

Amongst the many features possessed by the Contax the following are exclusive:

- (1) Range of 10 Zeiss lenses varying in focal lengths from 1 in. to 7½ in.; apertures f/1.5 to f/8.
- (2) The focal-plane shutter is entirely of metal, and gives automatic speeds from ½ second to a guaranteed 1/1,000th second. This latter speed is found only on the Contax.
- (3) Long base coupled distance meter.
- (4) Open back, therefore inside of camera easy to clean and to load, and plate adapters and dark slides can be used for scientific work.
- (5) No external knobs move during the exposure.
- (6) Shutter speeds can be determined either before or after winding shutter.

The Contax housing is of a modern pleasing shape, all working parts built in and safe from damage. A vast number of accessories are available for all classes of photography.

ZEISS IKON Ltd., 11, Mortimer House, Mortimer St., London, W.1

Send for our publications: "The Connoisseur and the Contax," "The Ten Contax Lenses," and "Accessories for Contax Photography."
